## Ekotape<sup>®</sup> RECORDERS

### SPEED FOREIGN LANGUAGE STUDY

*“---Their  
language  
is alive  
immediately”*

Teachers speak enthusiastically about the new tape method of teaching foreign languages. And, note a big difference in achievement — in pronunciation and comprehension. Results of this tape teaching system indicate a significant “break through” in language training and point to a growing acceptance.

Ekotape recorders are an accepted standard in many of these modern language training centers — because they’re so dependable, so easy to operate. Controls have been simplified, all are on top in full view. Handy knob gives instant start/stop action. Fidelity, of course, is unexcelled. What’s more, the price is completely compatible with school budgets.

Accelerating your language training program? Your Ekotape dealer has full particulars on this new tape teaching method.

# The Dismaying Lag

A principal speaker at the National Audiovisual Convention in Chicago made a point that sound motion picture projectors hadn't changed much in the past many years. He said you could compare projectors with vacuum cleaners to see what he meant. Current projectors are practically the same as the first ones; but look at the change in vacuum cleaners over the same twenty-five years!

Now we're not denying that sound projectors could be improved and that they could be made simpler to thread and operate. But we think there's another point, and a far more important one, to be made. We maintain that the audiovisual industry continuously demonstrates its readiness, ingenuity, and skill for blending electronics and gears and ideas into amazing audiovisual tools. But the inventors and designers and manufacturers of these technological tools for learning are so far out in front of educators' readiness to use them that the situation is appalling.

It's more than just a trite expression that it takes education fifty years to accept a new idea. It's been a fact. It's more than fifty years now since motion pictures became a reality; and it's more than fifty years since pioneering educators saw the vision and the promise of motion pictures for communicating information and ideas. Of course motion pictures are used in schools today. But to what extent? How many teachers are using one ten minute motion picture once a week? Once a month? Or even once a year? No matter what the answers are, this use is far too little compared to the teaching potential of the medium. You know this. You understand the power of pictures for learning.

The same can be said for other audiovisual tools. Take records and recording for another instance. Here, too, it's *not* the lack of the right equipment. It's the lack of readiness on the part of educators to make use of materials and methods that are available. Language laboratory methods for learning a foreign language are not new. The recording of foreign words and sentences on discs is as old as the recording industry itself. We've had the machines and we've had the records. These have been continually improved. We've had good magnetic recording equipment now for almost fifteen years. Yet even today, and even with the stimulus of the National Defense Education Act, it is still a rare high school that has incorporated the use of records and recording into accepted basic methods for language instruction.

If you respond to this criticism of American education, don't tell us it's lack of money that holds education back from using newer and better tools for communicating ideas. There's money enough in this country to buy anything the people want. Look at the statistics for tobacco or beer or tv or any luxury you can name for proof of this fact.

Another speaker at the National Audiovisual meeting made the point better and maybe gave us a clue for action. Here's the way he said it: "*In a free society a free people does whatever it feels is urgent and needed, whatever it is enthusiastic about doing. No one is ever enthusiastic about anything until he understands it.*"

Now, then. Here is a task and a challenge for everyone with understanding of the power of audiovisual tools for communication. We must redouble our efforts to overcome the *dismaying lag* in our use of the electronic communications tools we have. We must renew our efforts to convince the people of this free society that they and their children can learn more and better through the use of these tools. We must make the free people of this free society enthusiastic about using audiovisual methods in their schools. First, however, we must make sure that education's decision makers — the school board members and the superintendents — are enthusiastic about them too.

*Paul C. Reed*

# HISTORY COMES TO LIFE THROUGH OUR DYNAMIC FOUR-POINT PROGRAM!

The completion of the new series, *The Chronicles of America Filmstrips*, rounds out our four-point program to enrich and vitalize the study of American history as never before possible. Through these rare teaching tools our precious democratic ideals are projected into their true, dramatic dimensions — to inspire our youth to their devotion and preservation.

Prepared by eminent specialists in history and education, these authoritative, vividly-presented books and filmstrips bring to the student a feeling of personal identification

with the struggles and accomplishments of the great leaders who have influenced and shaped our civilization.

Each of the four key points in our program is a flexible and versatile instrument, offering almost limitless creative teaching opportunities. Together, they form an unprecedented, comprehensive apparatus for learning through participation in "living" American history. We urge you to order them *today* to assist you in your vital task of guiding our citizens of tomorrow.

**NEW**

## THE CHRONICLES OF AMERICA FILMSTRIPS

15 UNITS

15 Dramatic Milestones

Already, the excellence of this latest visual creation has proved its value to the high purposes of our program. Our young citizens will see our glorious past come to life — Columbus' great voyage, the early settlers, the War of Independence, the opening of the West, Washington, Lincoln, the War Between the States.

**Now Ready for Immediate Delivery**

Largely based on the documentary photoplays of the same name, the filmstrips were prepared with painstaking care to make available this unique source of original material in modern, greatly improved form at a fraction of the original cost. The fifteen filmstrips and the valuable Teacher's Guide have now been completed. Orders are being filled without delay.

**\$97.50 FOR THE COMPLETE SERIES  
OR \$7.00 EACH**  
Comprehensive **TEACHER'S GUIDE** Free

## THE PAGEANT OF AMERICA FILMSTRIPS

30 UNITS

An Award-Winning Series

These famous filmstrips established the high criteria for visual productions. From the American Indian to the Atomic Age, the story of America's growth to world leadership, its moral and material strength, is re-created in a manner which *must be seen to be believed!*

Already approved, adopted or listed by important Boards of Education, the scope of the material in this series is so wide that utility extends beyond history to many other subjects.

**\$195.00 FOR THE COMPLETE SERIES  
OR \$7.00 EACH**  
**TEACHER'S GUIDE FREE FOR EACH UNIT**

*The two series of filmstrips were created  
under the editorial direction of  
RALPH H. GABRIEL  
Sterling Professor of History, Emeritus,  
Yale University*

## THE CHRONICLES OF AMERICA 56 VOLUMES

ALLEN JOHNSON - ALLAN NEVINS, Editors

History at Its Readable Best. Each volume tells an exciting story of men and women or forces in action, expertly written by a distinguished author who presents his theme vividly with all the appeal of good fiction. The 56 volumes fall into nine topical groups, from the early days of the Red Man to the momentous end of World War II. These remarkable books, long noted for their accuracy and literary quality, are an important "must" for every school.

**\$199.00 complete, or \$3.95 per volume**

## THE PAGEANT OF AMERICA 15 VOLUMES

RALPH H. GABRIEL, Editor

Magnificent Picture Stories. The adventures and statesmanship of our people are revealed in a panorama of 11,500 rare pictures and maps, spun together by scholarly, colorful text in a succinct format. The topical treatment covers, in addition to the more orthodox aspects of history, such subjects as religion, art, sports, etc. Replete with accurate detail and professionally indexed, these books have become standard for use at all levels.

**\$147.75 Complete, or \$10.75 per volume**

# The Resourceful Teacher and AV

**A** superintendent friend of mine once remarked, "if I can show a prospective classroom teacher a bare classroom, one stripped of all the necessary tools of instruction, and that applicant still desires employment in my district, I know then that I have found a resourceful person."

Evidently his formula works with some degree of success as he always has an excellent staff.

Although his district makes available necessary audiovisual materials within the limits of a moderate budget, resourcefulness on the part of the classroom teachers, supervisors, and administrators swells this collection and continuously revises and adapts "in-use" selections for more effective presentation—always seemingly individualized to the particular teacher and learning experience. This individualization and adaptation applies to equipment as well as to materials.

Equally interesting was a comment from the audiovisual director of this same school district. "Do you know," he related, "I have observed public information personnel representing industries and business in our community using audiovisual media in presenting their stories. We in education have had access to these media for many years and we are in the business of instruction, yet these public relations people are outdoing us two to one. It is unbelievable. If only our classroom teachers can develop a like proficiency, we will make a greater contribution to the education of children."

What better situation can exist in any school district than does in this one? Here we have a superintendent who believes in resourceful people and also we have the kind of audiovisual director who believes in promoting better instruction through better utilization of our media. He will initiate the in-service program and ensure its realistic activities, evaluation and continual improvement.

This audiovisual director is working with a staff capable and eager to devise ways and means and with the power of meeting all situations. The superintendent has a philosophy on which to establish his purpose. The audiovisual director has a purpose on which to direct his actions.

The responsibility for in-service training in the use of audiovisual instructional aids involving local production, individualization, and adaptation of them is shared by these three groups in these ways.

1. The administration must provide the necessary budget, space, and time required.

2. The audiovisual director must combine leadership, technical knowledge and teaching skills into a program to do the job.

3. The classroom teachers must be resourceful and accept the responsibility to become proficient in proved methods of instruction.

No items are so often overlooked in school districts as budgets for local production, and provisions for space and time for this process. With the wealth of materials and equipment today coupled with the growing interest and development of educational television, the conventional duplicating machine cannot function as the sole tool of production for the classroom teacher.

However, such a budget provision can be severely jeopardized if demanded and acquired by an overly ambitious audiovisual director seeking funds in one grand bundle for every conceivable activity. Each phase of this production process must be planned and developed to a point of merit before considering additional money for expanded activities.

The school administration should require and receive a well-planned program from the audiovisual director before allowing any budget request. Projections into future years should accompany the request to acquaint the administration with the over-all purpose of this service.

In designing the audiovisual center, permanent space must be provided for these production processes. All potential activities should be reckoned with in this planning. Preparing and editing recordings, mounting all types of pictures, art work, design, lettering, making displays, projection materials, and storage for sup-

plies, tools and equipment are but a few.

Time for utilization of this space must be allowed all staff members. This requires co-operative scheduling of the school program by the administration, audiovisual director and classroom teachers.

This in-service program carried on for the purpose of developing skills in producing, adapting and individualizing audiovisual media will require additional funds, temporary space, and provisions for staff time either on a release or volunteer basis, all of which will be in excess of the regular budget-space-time considerations.

The audiovisual director must assume the leadership role and also select leadership from the professional, commercial, and community pools. His job is to organize the chosen activities and personnel into proper sequence which will build complete and lasting skills. He is the master teacher.

Good planning is an "about face" away from the usual confusion-packed workshop style which exhibits everything but allows proficiency in nothing. One and possibly two skills should be taught at a time. Thoroughness in learning will replace the limited acquaintance-with-all-media type of philosophy if this is done.

Classroom teachers and other staff members can be provided with introductory learnings in a general assembly and then allowed, with proper instruction and practice, to become proficient in a special phase of production by scheduled use of the regular facilities. These skills should be applied to the daily instructional program at once. This builds the ability of the teacher to adapt and individualize audiovisual media.

Thus, the skill of selecting the proper media for the particular teacher and the particular lesson must follow closely behind the skill of production to be effective. Eventually these should complement one another; however, this is very improbable as some people will be more imaginative and possess more organizational than technical ability and some will develop much technical skill and retain their limited imagination.

The classroom teachers and other staff members are the students. Their part is to become intensely interested in preparing themselves to be better teachers. There is no substitute for this desire and no excuse for an absence of it, all

other factors being conducive. Professionalism connotes an excellence of preparation, of skill and knowledge, of desire for improvement.

Local production is in itself a technical process. However, better equipment, materials and tools of today make it possible to enjoy the benefits of this activity by simply focusing attention on the "how" with only a little knowledge of the "why" being necessary.

Adaptation of audiovisual media is based on a complete knowledge of the school curricula including the objectives and standards adopted. This, coupled with an understanding of the attitudes, interests, abilities, and capabilities of the pupils being taught, the physical plant facilities, and the available materials and equipment, helps govern the extent and manner with which the media are modified for use.

Individualization applies to each person's presentation with the use of specific media. Although the effectiveness of classroom teaching is known to be dependent upon the classroom teacher's presentation of any given concept, good opportunities have been overlooked in developing this factor and especially in the audiovisual field. Possibly this is what the audiovisual director implied when he spoke of the effectiveness of the public relations people.

To achieve any measurable success in this skill of individualizing audiovisual media, both objective and subjective examination of the classroom teacher's possibilities must be made. A determination of effective presentation would be made by the classroom teacher, results indicated by pupil response, and by the judgment of the audiovisual director and supervisors based on a consultation with the teacher, and examination of pupil response, and an observation of the teacher at work.

A greater contribution can be made to the education of children. The administration, audiovisual director, and classroom teachers have this responsibility. Through in-service activities providing skills in production, adaptation, and individualization of audiovisual media, this contribution will become a reality. It begins with a resourceful teacher, an administration that can recognize this quality, and an audiovisual director who knows the advantages of the media with which he works.

ELEMENTARY SCHOOL MATERIAL CENTER  
Dade County, Miami, Florida

Floor plan of materials center.

# A Materials Center for Easy Access

*by F. Edgar Lane*

Teachers and pupil assistants produce instructional materials for the next day's classwork. (Emerson Elementary School)

A teacher checks out record player from AV storage. Self-operated system is simple and easy to control. (Westview Elementary School)

**I**N the Dade County (Miami, Florida) School System the Instructional Materials Department includes audiovisual services, school library services, textbook services, the professional library and the distribution services! The philosophy is that the classroom teacher needs to be able to get all the instructional materials she needs at one location in the building. This should be as nearly central as possible. For that reason, in elementary buildings, the Administrative Area and the Instructional Materials Area are continuing parts of the same building wing. This article describes a representative elementary school materials center.

A straight line flows from the principal's office through the secretarial and administrative work area to the teacher's work room, the materials work area and on through the library and conference areas. Referring to the drawing, we consider everything (except the clinic) beginning at the teachers' work space and extending through the library workroom, the library and conference rooms, as the Instructional Materials Area of the building. There is a similar area in every elementary school, old and new. A laminated plastic work surface extends through the teachers' work area and on through the library, all along one wall. Underneath this work surface are storage cabinets with at least two knee spaces having the work surface at table height. On the wall opposite this work surface (which is against the window wall), there is narrower work surface, again with cabinets underneath it, and again extending on into the library workroom.

The teachers' work room is designed to enable teachers to construct materials of their own without the difficulty that would be entailed in locating raw materials, bringing them together, finding the tools, doing the work in their own room and dispersing tools and unused materials.

We also envisage the time when our materials personnel will have the "know-how" to give direct help in more extensive materials construction.

Note that the sink is in a projecting construction between the teachers' work area and the library work area, thus serving both. The traditional library area has been planned with carefully allocated space for functional shelving designed for the material to be stored. Thus we have shelving especially for accommodating children's picture books with their odd outsizes, for reference works, for magazines, for atlases, and of course, standard book shelves.

When new schools are planned and construction begins, a whole series of related activities begins also. For each level—elementary, junior high and senior high—there is the purchasing of a definite list of equipment that is enumerated in the Board of Public Instruction Bulletin 31A<sup>1</sup>. There is also the purchasing of expendable instructional materials and equipment. This last includes audiovisual equipment and library books that are centrally processed. When school opens, all equipment is in place, the processed library books are on the shelves and the catalog

cards are in the catalog. The school is ready for business.

We start from the first grade<sup>2</sup> to indoctrinate children in seeking authoritative sources for answers to their questions, believing that the safety of our social order resides in all citizens so indoctrinated. The aim is to present balanced viewpoints through careful selection of materials. Responsibility for the selection of materials appropriate to the course and the grade level (aside from texts which are State-adopted) resides in each principal and his faculty. Selection is generally a "team-work" situation which avails itself of expert consultants in the various fields.

Also we start from the first grade to expose children to functional training in the use of the materials centers in all elementary schools. By the time children finish the elementary school they are at ease in these centers. They know the organizational plan from long practice in finding their own materials by means of the card catalog, Readers' Guide, a wide range of reference materials (not just encyclopedias), World Almanac, books of quotations, various catalogs, etc. They know the type of information offered by each encyclopedia. They know that filmstrips can be viewed individually or by committees using table top viewers; that "earphone" record players provide a multiplicity of experiences.

To us, there is a quiet satisfaction in having public library people call us for help in regulating public school child demand for their materials. They are most cooperative, even placing book collections in our schools to augment our own. To say we appreciate this cooperation is to put it very mildly.

In the Administration Building there are other materials on which teachers can draw. There are some 4000 titles in educational motion pictures, 4500 titles in filmstrips, art reproductions in glare proof, laminated plastic, "satchel museums," models of many kinds, a professional library of over 10,000 volumes. Any of these items can be requisitioned and are then delivered or picked up on twice weekly deliveries. Teachers may also borrow 35mm still cameras, 16mm motion picture cameras, public speaker systems for outdoor events, dry mounting presses, grommeting machines, etc. Demand for all these items grows continuously.

Liaison with teachers is through the materials personnel in each school. These are the librarian and an audiovisual representative. Every school has the services of a trained librarian, most of them full-time. We are moving toward having a record of all instructional materials in a school in its materials center card catalog.

We credit our Administration for having done a wonderful job of getting our public and our Board of Public Instruction to support this program. We think it is wonderful.

<sup>1</sup>Bulletin 31A—Initial Equipment and Supply List for Dade County Public Elementary Schools. Keeping this bulletin current is the responsibility of the Supervisor of Instructional Materials.

<sup>2</sup>This is true of all our elementary schools—new or old.

# Vitalizing Geography Studies

(Reprinted from *The Journal of Geography*, December, 1958)

**G**EORGE T. RENNER pointed out that geography “. . . is one of the most difficult things in the educative process to teach.”<sup>1</sup> He would agree that for pupils it is one of the most difficult of the disciplines to learn. One facet of the difficulty, for teacher and pupil alike, involves the problem of transcending limited experiences with the earth. How many of us, for example, have scaled the high Andean peaks, have waded knee-deep in water in the rice paddies of Thailand, have slept in the tent of the Bedouin of the desert? How many of us have seen the wheat fields of Kansas, the ore boats of Duluth, the Statue of Liberty? How many children are encompassed by a world whose frame extends less than 50 miles in any given direction from the school's doors?

Educational psychologists have pointed out, that to do our job and do it well, we must learn to cultivate the child's imagination, we must teach the correct interpretation of pictures, maps and presumably of globes.<sup>2</sup> These are all aids in transcending the student's limited earth experiences.

How well this can be done at an early age was recently demonstrated by the teachers and pupils of Sen. Robert F. Wagner Junior High School, New York City, in their fine exhibit, “Georama — Geography in the Global Age.” The exhibit took ten weeks to produce; it was on display for a month.

A visit to the exhibition was one to delight the teacher. Student guides were eager to explain the dioramas, the models, and the work that went into the exhibit. Youngsters gazed in awe at the giant six-foot relief globe in the center of the room<sup>3</sup> and the full-scale model of the earth satellite.<sup>4</sup> Interested children, having already learned to use new terms — seismology, oceanography, International Geophysical Year — in class, were applying them in the Georama. One lad was fascinated by the diorama entitled “How the Mongolians Made Camp,” another by “the Face of the Earth as Seen from the Air,” and a young lady was admiring “Architecture Around the World.” Maps were everywhere. Among these was one showing the contour and its significance. Others showed the importance of location to Manhattan Island, the distribution of natural rubber around the earth, and trouble spots in the Caribbean. Also included in the exhibit were at least 30 small globes, each used to depict a significant geographic distribution or concept — such as the distribution of the world's glacier fields, earthquake areas, member stations of the I.G.Y., the winds and currents, the routes followed by the great explorers, and the world's major religions.

Nothing was done haphazardly. All displays

were arranged in orderly sequence. Observers were taken first through “The World We Know” where emphasis was placed on maps, map reading, globes and the study of the natural environment, next through “The World We Don't Know” which stressed glaciology, oceanography, the upper atmosphere, the significance of the I.G.Y. and the polar regions, and finally through the “Special Exhibits” featuring the giant globe, the model of the earth satellite, cosmic rays, the operation of rocket fuels and the problems of outer space.

Mr. Charles M. Shapp, Principal at Wagner, pointed out that Georama was not a motivating force for the study of world geography alone. “It started,” he said, “as a 9th grade social study activity within the curriculum framework and mushroomed by student enthusiasm to encompass virtually all classes including science, literature and art.”

When asked which of the tools was most useful to them during the course of the exhibit students invariably replied, “The small globe.” Its possibilities for the educative process intrigued me from the start.

We are all aware of the place that the globe holds in geographic education. We all know, too, that the ordinary multiprinted globe suffers from one serious limitation. It does not convey to the child the true picture of the earth's land surface. Mountains, river valleys, spacious canyons and other topographical forms have been reduced to a single dimension — to the smooth surface. And from this smooth representation of the earth the student has been expected to grasp what the earth's surface is really like — to discover the fundamental relationships between topography and weather and climate, the influence of terrain on historic migration routes, on land utilization, on trade. All too often these are mental leaps too difficult for the youngster in the grades to bridge. It is asking the smooth surface globe to perform a task which it is incapable of performing.

The 12 inch relief globe, which really sparked the Georama, has bridged that gap.<sup>5</sup> It is a white unmarked project globe that portrays the world land surface in three-dimensional relief.<sup>6</sup> Made of plastic in two hemispheres to permit “team” work, it is designed for the student to paint his study on the surface with poster colors, and because it is washable, they paint without fear of making irreparable errors. The excitement of the children as they become aware of the significance of the earth's relief features in their study is a rewarding one to observe. This is true experiential learning.

Student reactions to Georama were recorded in essays written soon after the exhibit closed. Mason Bernard, 8th grader, states, “Georama is

The Georama means increased student participation.

a wonderful example of what we (junior high school students) can do." Mason helped to prepare the diorama "The Earth as Seen from the Air." "It was made of cardboard, rags, and plaster of paris. I also helped by painting some of the globes. Most of the kids in my class helped with something." Richard Weisberg, 9th grader, states, the Georama ". . . has helped many parents, teachers, students and guests to learn about how man lives all over the earth. The colorful way in which it was done added to its effectiveness and its beauty. The task of making the exhibits, the excitement of the display, the publicity, and the originality of the georama made it a huge and wonderful success." Sofa Khalidi, 8th grader, was impressed with the fact that ". . . it helps the teachers too, it helps to get them more involved with their pupils and to know them better. Perhaps the most profound statement comes from Dennis Miller, 9th grader, "This Georama has made a deep impression on me. I am taking a more serious interest in geography and science."

Mr. Shapp is convinced as a result of Georama that there is a latent, unsatisfied interest among students in the world in which they live, that given the proper tools students can be urged to probe much deeper into the subject of geography than had previously been suspected. The Principal was assured by participating teachers that all courses of study had been immeasurably enriched.

Mr. Shapp added that three things had been learned as a result of Georama: 1) that students are tremendously excited with the study of ge-

ography when it is made visually concrete, 2) a clearer understanding of the geographic base enriches the history, current events and science courses, 3) that such an undertaking stimulates teachers to experiment with and perfect interesting new techniques in teaching.

For my own part, I am convinced that Georama at the Robert Wagner Junior High School pointed to a new means of orientation for educators in supplying what may well be an answer to the search for concrete methods to introduce world understanding in the curriculum. I am convinced that similar studies at the elementary level would demonstrate even more dramatically the readiness level of the "television age" child. At the high school level I am sure it would facilitate in much greater depth the study of world geography and its allied disciplines so urgently demanded of our students today.

Students undergoing reading training, Hinman School.

# One Remedy for Reading Problems

by J. Ralph Kemp

*Private School experiment shows benefits of systematic, scientific reading training*

With the national concern over reading difficulties frequently approaching hysteria, it is important to note that experimental work is being done in the field of reading improvement and that it is being done carefully, scientifically and is showing results.

One such project was carried out during the summer of 1958 at The Hinman School in Atlanta, Georgia. The study-experiment was undertaken to determine the effects — and the indications for future instruction — of Controlled Read-

## Experimental Results

(Scores on Iowa Silent Reading Test)

ing Training when used as an integral part of a remedial and a speed improvement program.

The Hinman School is uniquely suited by its program and facilities to carry out such an experiment successfully. It is a private school offering elementary and high school instruction with emphasis on reading. In addition, special services are available for psychological testing, counseling, speed reading and an enriched program for students of above average ability. After regular school hours 50 or more students, enrolled in the public schools, report for special reading instruction.

The 24 students who participated in the experiment were selected through interview techniques. They ranged in age from 13 to 17 years. For purposes of the experiment, they were divided into two groups—Group A, made up of students deficient in both rate and comprehension, and Group B, made up of students who definitely needed to increase their reading speed, but showed little or no deficiency in comprehension.

Before the work began, Group A was tested with the Iowa Silent Reading test, Elementary Battery, Form AM, and Group B with the Advanced Battery, Form AM. Thus, the experimenters had a reliable base from which they could measure improvement.

The instruction for both groups was conducted during 32 hours over a period of six weeks; 20% of the time was used in controlled reading training, the remainder in practical reading, study skills and different phases of word study suitable to the particular group. The training was carried out somewhat differently for the two groups since for Group A it was essentially remedial, whereas for Group B it was essentially rate oriented.

Group A was given 15 minutes of Tach-X tachistoscopic training every other session, aimed primarily at vocabulary developments. It was combined with exercises in a 7th grade spelling text. Controlled Reader training was given for 20 minutes every other session with the rate of presentation strictly adjusted to the average comprehension of this group. Small increases in rate were made only when comprehension was considerably above average.

For Group B this was combined with 8th grade exercises. Controlled Reading training, also 20 minutes every other session, was essentially

Remedial Group (A)		Speed Reading Group (B)	
Beginning*	End°	Beginning*	End°
5.3	7.1	7.3	12.4
5.5	7.5	9.0	13 plus
5.8	8.3	9.2	13 plus
5.8	9.8	9.2	10.9
6.0	9.6	9.4	13 plus
6.2	9.4	10.0	10
6.5	9.0	13.0	13 plus
6.8	10.8	13.0	13
7.6	8.7	11.3	13
8.3	9.6	10.0	13 plus
8.6	10.9	13.	13 plus
9.2	11.1	10.5	12.1

\*June 9th

°July 16th

Note:—

Speed Reading Group B contained students who obtained the maximum score on the Iowa on the second test. Therefore, gains beyond the limits of the test could not be demonstrated.

	Group A Remedial (Months)	Group B Speed Reading (Months)
Mean Reading Rate Increase	9.42	45.5
Mean Reading Comprehension Increase	21.5	31.4
Mean Median Grade Placement Increase	19.0	19.75
Median Score Increase	14.67	16.33
<u>Otis Test of Mental Maturity</u>		
Mean of Otis (Beta Form)	95.9*	109.4°
Mean of Otis (Gamma Form)	95.8	116.3

\*June 25th

°July 2nd

different from the method used for Group A. The rate of presentation on the Controlled Reader was increased regularly, as rapidly as the level of comprehension permitted. During the last few sessions the rate was adjusted to exceed the capabilities of the group.

As an intermediate check on progress, the Beta Form (approximately 8th grade reading level) of the Otis Quick Scoring Test of Mental Maturity was administered to both groups. During the fourth week the Gamma Form (approximately 10th grade reading level) of the Otis was administered. Finally

both groups took the Otis test again at the end of the experiment.

Marked increases in both rate and comprehension were achieved in both groups.

Proportionately, the remedial group made a greater increase in comprehension than in rate.

Although it would be expected that scores on the Otis would drop when the more difficult Gamma Form was administered within a week of testing on the Beta Form, scores for the remedial group remained essentially the same, while the speed reading group actually improved 6.9 points.

# CRITERIA

## FOR AV EQUIPMENT

THE audiovisual instructional field is growing so rapidly that nearly everyone connected with it is immersed in problems of expansion, expenses and, especially, explanation to the public. One is struck by the several hundred articles published and indexed for the past few years extolling the virtues of audiovisual. Most are quite interesting in a general sort of way, but there seems to be a decided scarcity of articles written on practical matters and on solving problems encountered in setting up an AV program.

It is no secret that the AV Commission on Public Information, which is composed of the representatives of major national AV groups, has recently recommended that a minimum of one percent of each county's school budget be used for audiovisual purposes and that the equipment allotment should consist of at least 16mm sound projectors, filmstrip and 2 x 2" slide projectors (combination), opaque projectors, and tape recorders in amounts of at least one per school building or per 300 students (approximately). They also suggested one record player for each kindergarten and elementary school class or at least two per building, and at least one overhead projector for every two classrooms.

The position of the person or persons whose responsibility it is to have equipment available for classroom use may vary somewhat from county to county, but what really varies are the styles and workings of equipment and the problems concerned with choosing from what is manufactured.

Accordingly, many of these persons, rather than feel bewildered or possibly just to benefit from a discount offer, are inclined to "identify" the county with or standardize it on a particular brand or trademark. They do not first investigate the advantages and disadvantages of comparable makes to avoid sorrow afterward.

In 1954, Schuller<sup>1</sup> noted that there were 43 models of 16mm sound projectors, 77 tape recorders, 48 opaque and overhead projectors, 44 filmstrip projectors and 77 tape recorder models. A check five years later reveals that there are now at least 47 16mm sound projectors, fewer but more involved opaque and overhead projectors, 105 filmstrip and slide silent or sound projector models, 170 record and transcription

players and tape recorders, 22 special purpose projectors, 42 styles of projector stands and carts, 59 styles of projector screens and several other kinds of equipment. Considering the substantial funds which must be spent to purchase this equipment, the responsible officials should have a ready means of determining the really worthwhile from the mediocre to get the best for their expense.

There has been an attempt in the following pages to draw together information from various AV specialists and from sources listed below, adding what was thought helpful and logical, and sum it up for the purpose of presenting to those persons charged with buying AV equipment certain pertinent and non-technical criteria of choice and acceptance for their consideration and assistance. Most of the criteria apply to all types of equipment, while those which pertain to only one kind are so worded and designated. It was decided not to include those criteria which were obvious or meant little, such as "Does it suit the purpose for which it will be used" or "Is there a supply of material to be used with the projector."

### DEMONSTRATION CRITERIA

1. Is the room being used for demonstrating typical of most classrooms in which equipment will be used?
2. Is the room used the same one each time? (This is to check over-all comparative features such as sound reproduction, projector noise, etc.)
3. Are the same screen and same materials (e.g. film, record) being used for all comparative demonstrations?
4. Is each demonstrated piece of equipment or each salesman given equal time for presentation and consideration?
5. Are the persons who are evaluating the demonstration given an individual opportunity to examine, set up, operate, pack up, and lift or move about the piece of equipment under consideration?
6. Are you aware, when planning a demonstration session, that the only true evaluation is made by simultaneously comparing makes of the same type of equipment on separate but similar screens?
7. Are each of the evaluators provided with an appraisal sheet which lists the criteria on the next pages?

<sup>1</sup>Schuller, Charles R. (ed.) *The School Administrator and His Audio-Visual Program*. Washington, D. C., 1954, pp. 73-76.

*The first part of a set of appraisal standards for judging equipment. More detailed criteria will follow.*

GENERAL SELECTION CRITERIA

I. Prior Investigation

a. Have you visited other schools or otherwise investigated the performance of their equipment and their experiences with several different kinds so you may be especially watchful for the inherent problems?

b. Have you compared reports from the people you have visited and other reports that you have heard?

c. Are you keeping an open mind on makes of equipment until after your evaluation has been made?

d. Have you investigated the dealer's reliability through the Better Business Bureau, or similar organization?

II. Construction of Equipment

a. Does the equipment appear rugged and durable and does it rest solidly on its feet, or is there some wobbling?

b. Is the case, including hinge system, sturdy and well-fitted, or can the sides be pressed in and are some difficulties encountered when putting the cover back on with all parts inside which should be there?

c. Have you investigated the advantages of the company's premium, or high quality, equipment? (A little extra spent now may save more dollars and much heartache later on.)

d. Does the equipment have an Underwriters Laboratory label?

e. Is this a new, untried variety of equipment which has not been thoroughly tested by other persons through long use?

f. Are you concentrating on one type of equipment to the blind exclusion of others? (It is easy to

examine and use only one kind of equipment, but this is passing up a great field of other worthwhile audio and visual aids.)

g. Do you have a long-range acquisition plan in mind, such as starting with what your school needs most, or a certain number of "these" units and then "those" units to balance the needs, or possibly some other plan? (The type of plan is not as important as is having one.)

III. Threading

a. Is there easy, uncomplicated threading?

b. Is there a threading diagram or chart permanently fixed in an obvious place?

c. If the projector is not properly threaded, will the sprockets tear or break the film? (Some makes will not function if improperly threaded, thereby reducing film damage.)

d. Are the sprocket points in perfect shape, or are one or more points slightly damaged, bent or missing? (Even on a new projector, this is conceivable. Examine the sprocket holes on the film which was used for the demonstration. This will tell the tale for everything but missing points which can be found by touching or looking at the sprockets.)

e. Is the film path, especially in the gate, of sufficient quality that it will allow splices to pass through satisfactorily without loss of loop or damage to film or film surfaces?

IV. Controls

a. Generally speaking, are all controls simple, properly labeled (preferably stamped on a separate plate), conveniently located and easy to reach from operator's seat even with projector operating?

b. Does it have an easily accessi-

ble and adjustable framing device?

c. Is there an uncomplicated, power-driven rewind workable without changing the belts or reels?

d. Is the elevation control easy to locate and does it work smoothly, or are the crank and/or lock and release buttons widely separated which allows the support bar to shoot out when adjusted like a knuckle duster?

V. Illumination, Lens and Projection Lamp

a. Was the projector operated without film or projection material to test for sharpness of focus and lack of fuzzing at the edge of the lighted screen area, and for evenness of illumination over its entire surface?

b. Was the projector at right angles horizontally to the screen and perpendicular to its center for the illumination testing to be valid?

c. Are the projection bulbs used in each demonstration of the same rated voltage and wattage and completely new for fairest evaluation? (New lamps should be used for testing since the older ones have less illumination.)

d. Is the same focal length lens being used in each demonstration? (This can mean everything in comparing brightness on the screen.)

e. Is the quality or color of the light on the screen whitish or bluish, or does it show poor lens qualities with rainbow effects or yellowish light, which is caused by chromatic aberration in the lens?

f. Do ripples or stationary waves of light show on the screen? (This is due again to chromatic aberration, denoting poor lens grinding or quality.)

g. Have you taken a light meter reading at the center and at least four corners, and perhaps other

equi-distant points, of the screen to see if they read the same? (Sometimes one whole side will test undesirably weaker.)

h. Did you use the light meter to test also for general minimum intensity of illumination at the screen? (The foot candles are the important determining factors and mean more than the rated wattage of the set. The reflector polish, condenser system, efficiency and newness of the bulb, quality of the lens and size of the aperture in a low wattage set may be better than that in a higher wattage, more expensively priced and operated set; higher wattage *may* mean just higher electric bills. Check the standards and ratings listed below for each machine.)

i. If no light meter is available, to check overall power, have you consulted the suggested power ratings in watts listed below for each machine?

j. When using film or projection material, is the image as clear and sharply focused at the edges as at the center? (If not, then this is the astigmatic fault of the lens.)

k. Is there provision or a method for cleaning the gate, the aperture plate, and the lens on both

ends or sides?

l. Can the projection bulb be changed easily?

#### VI. Cooling and Overheating

a. Does the cooling fan turn on automatically with the projection switch, or at least with the lamp switch?

b. After having operated the machine without projection material for at least 30 minutes, does any exterior part of the projector housing (except the top of the lamp house) show an increase in operating temperature of over 50° above the ambient (room air) temperature? (This can be determined by thermometer readings from contacting various parts of the case and the aperture plate.)

#### VII. Sound

a. Do the materials used in the equipment being tested have a wide range of sound, voice and music by which to judge the quality of the apparatus?

b. Are there two tone controls (treble and bass)?

c. Is there an objectionable hum when operating with the amplifier turned on only half way to full volume? (This hum should be no more than 2 decibels.)

d. Does the amplifier have a power rating of 12 watts, and certainly not lower than 7 watts, with low impedance input for microphone? (The latter refers to low resistance in the microphone cord, or use of a shorter cord.)

e. Do the speakers have more than 2 decibels of sound distortion?

f. If a high fidelity arrangement is being tested, are there three sizes of speakers to handle the ranges of tones? (To be true high-fidelity, there must be a 4-8" speaker, the "mid-range," for medium ranges, a 2-4" speaker called a tweeter, for the high tones, and a 10-15" speaker, called a woofer, to handle low tones. Also to be true high-fidelity, each speaker must be physically separated from the sound source to avoid vibrations.)

#### VIII. Projector Noise

a. When the projector is running without the amplifier, is a person near the projector easily able to hear another person standing or sitting close to the screen while in a typical classroom?

b. Is the projector noise disturbing or does it drown out conversation in any part of the room?

#### IX. Oiling, Maintenance, Cleaning and Storage

a. Are the oiling holes centrally

located or at least easily accessible? (If the machine has nylon gears, do not oil them because you will ruin them; they are also practically noiseless.)

b. Are commonly consumable parts such as projection bulbs and amplifier tubes housed in such a way as to enable an unskilled person to replace them with ease and without use of tools? (The cover over the amplifier tubes should be easily removable.)

c. Do the areas where there is the most vital need for cleanliness, such as lens and film channel, have provision for removal of debris? (A lint brush should be able to be pushed through for cleaning.)

d. Do the various components of the equipment fit together with ease, and does the case provide complete physical coverage so that dust and grime deposits are kept to a minimum?

#### X. Portability

a. If carrying the set will be a permanent practice, is the weight low enough so carrying is not difficult, and does the handle appear and feel strong enough to hold up over the years? (The better plan is, of course, to provide a metal cart on which the projector can be rolled around even by elementary pupils.)

b. Does the general shape of the equipment make it possible or nearly impossible to move it through classroom doors with complete ease?

c. Have you calculated the difficulty or lack of it that students may have setting up and putting away the particular equipment? (More and more today, students, even in the sixth grade, are learning to operate equipment unaided in the classroom while on free time.)

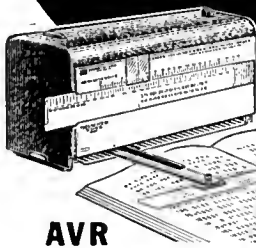

#### XI. Available Service

a. Is factory service available within a reasonable vicinity or is the vendor able to furnish authorized factory repair service for the equipment within the state or closely adjoining state in which it is for sale?

b. Does he maintain a stock of consumable items such as lamps, tubes, belts, switches, line plugs and electrical cords which may be of special make and not otherwise obtainable?

c. Is the vendor able and willing to furnish loan equipment upon reasonable notice of need while school equipment undergoes repairs?

**NOW IN THOUSANDS OF CLASSROOMS!**

**BEST . . . because it has passed the classroom test**

AT A COST AS LOW AS **37c** PER PUPIL\*

**AVR RATEOMETER**

**Tops the list of America's Reading Learning Aids because of its proven performance**

“Look at what’s  
**NEW**  
in sound projectors!”

*IT'S SAPPHIRE JEWELLED  
—BUT THAT'S ONLY THE BEGINNING...*

# Introducing the new Bell & Howell Filmosound Specialist 399AV

(America's most versatile 16 mm sound projector)

## Look what it lets you do...

### ZOOM!

Bell & Howell's *FILMOVARIABLE* lens lets you zoom the picture to fit the screen. Don't move the projector. Just twist the lens! The only *optional* feature shown on these pages. All others are standard equipment, built into the *Specialist* 399AV projector.

Look at a frame as long as you like. Bell & Howell's exclusive "cold glass" heat filter gives you *brighter* still pictures than you've ever seen in a sound projector. The "cold glass" safeguards your film and lets you stay on frame *indefinitely*.

**LOOP!**

No fluttering or flickering. The automatic loop restorer brings back a lost loop in the wink of an eye! No interruptions. Your audience stays *attentive*.

**RELAX!**

It's the easiest of all projectors to use. You can thread it in seconds and control your showing with a single dial. You never have to oil it because it lubricates *itself*. And you know the *Specialist* won't break down in the middle of a showing. Every single part is engineered to last. This is the projector that never quits running!

**LISTEN!**

It's a new 2-speaker sound system! Bell & Howell has added a *second* speaker for greater clarity and richness. Both are permanently mounted. You get better communication and clearer understanding.

**REVERSE!**

Did somebody miss something? Flick the reverse switch, run it back and show the scene again. Just as an instructor can stop and go back over a point for clarification, so can the *Specialist*.

★ *and it's sapphire jeweled*  
All critical film handling parts are surfaced with sapphires for 400% longer life.

# AUDIO

by Max U. Bildersee

## With an "Ear to the Ground" at NAVA

We went to hear the AUDIO part of the National AUDIO-Visual Association Convention and exhibit. Traditionally, the NAVA show is designed to introduce new materials and new equipment to the dealers. It is the trade-show wherein the manufacturers and the dealers seek each other out to explore new avenues of association.

We were disappointed but not surprised to find that the emphasis in audio is still on things—machines—equipment, and not on materials. There were many interesting exhibits featuring record players, tape recorder/reproducers, language laboratories—the gamut of audio equipment. There were but two exhibits stressing the audio materials of instruction.

We were delighted that these booths were continually crowded—solid evidence that there is great dealer and school interest in appropriate materials—and we hope that this interest will be translated into introducing the instructional materials demonstrated to those who were unable to be at the NAVA show to hear for themselves.

The importance of materials is mirrored in the comment of one audiovisual dealer from the south who told me, "I'm sure interested in records. That represented my biggest single line of sales last year."

The recordings demonstrators were Folkways (117 West 46th Street, New York 36) who are both producers and distributors; and the Wible Language Institute (Hamilton Law Building, Allentown, Pennsylvania).

Mr. Moses Asch brought with him samples from his tremendously broad and useful collection of recordings. The FOLKWAYS library is without doubt the largest library of its type in America, and schools and school personnel, as well as libraries and their personnel, should be intimately acquainted with the depth and breadth of this unusual catalog.

We noted many new titles displayed here for the first time for educators, and dealers alike. Among them were such intriguing titles as "Picasso," "O, Canada," "The Glory of Negro History," "Robin Hood Ballads," "The Changing English Language," "Early

English Poetry" and "Learning as We Play."

The Folkways catalog is divided into such sub-headings as "Americana," "Songs of the States," "American Historical," "Music, U.S.A.," "World Historical," "Ethnic Library," "American Documentary," "Science" and many other areas including language recordings (Spanish, French, Mandarin and English), folk tales and music for children, religious recordings, music instruction and literature. Somewhere in this collection there is a variety of material suitable for instruction at every grade level and in every school.

If you do not know the Folkways collection, we urge that you become acquainted with it.

Mr. Asch produces recordings and distributes them. Mr. Wible, on the other hand, is a recordings distributor through his Wible Language Institute. Although his catalog indicates a specialization in recordings, tapes, filmstrips and slides as well as other devices and materials in the foreign language area we foresee expansion because the catalog offers recordings in music and literature as well. And the latter were prominently displayed in the booth at Chicago.

There were other exhibits specializing in audiovisual material. Jam Handy (2821 East Grand Boulevard, Detroit 11, Michigan) was there with their catalog of filmstrips and filmstrip recording sets. These deal, as all instructional materials people know, in the variety of areas of teaching in our

schools. In this year of the NDEA Science and Mathematics are not overstressed to the detriment of other aspects of the course of study.

McGraw-Hill (330 West 42 Street, New York 36) was there, too. They announced as of July seventeenth that two new sets of sound filmstrips will be ready in September, 1959. These are titled "Spanish for Elementary Schools" and "French for Elementary Schools" and are designed, "to meet the specific needs of the rapidly growing number of elementary schools with foreign language instruction programs."

Each filmstrip tells a simple story of the activities of American children. The action unfolds on the screen while the accompanying recording tells the story in simple alien vocabulary. The story is repeated with simple alien captions superimposed on the pictures so that students may hear and then see the language. It is essential, we believe, that a third step be introduced by the teacher—that of speaking. Hearing—Seeing—Speaking are all desirable in this level of learning.

It is to be hoped that this initial, and perhaps tentative, step in the direction of supplying foreign language teaching materials for elementary schools will be followed by new and additional materials as time progresses. Indeed, foreign language instruction for a short period time in the elementary school may be wasted. It is essential that a continuum of learning experiences based on sound instructional materials be offered to elementary schools if the present trend towards beginning foreign language instruction early in the school career is not to become one of the great failures of modern education.

Another leading materials exhibitor was Eye Gate House, Inc. (146-01 Archer Avenue, Jamaica 35, N.Y.),

**califone CORPORATION**  
1020 NORTH LA BREA AVENUE  
HOLLYWOOD 38, CALIFORNIA

showing a variety of educational filmstrips and associated phonograph records. Linguaphone (30 Rockefeller Plaza, New York 20) was represented and was showing their particular line of recordings designed for language instruction.

There was a variety of audio equipment on display. Record players, tape recorder/reproducers and radios were to be seen. Among the exhibitors showing this type of equipment were such well known names as Ampex Audio (1020 Kifer Road, Sunnyvale, California) showing tape recorders and the Ampex Corporation (934 Charter Street, Redwood City, Cal.) showing tape recording equipment. Others showing specialized audio recording equipment included the Antrex Corporation (856 N. Rockwell Street, Chicago 22) exhibiting battery operated

tape recorders; Audio-Master Corp. (17 East 45th Street, New York 17), Bell and Howell (7100 McCormick Road, Chicago 45), Califone Corporation (1041 N. Sycamore Avenue, Hollywood, 38), Newcomb Audio Products Co. (6824 Lexington Avenue, Hollywood 38), North American Philips Co. (230 Duffy Avenue, Hicksville, L.I., N.Y.) and many others including RCA Victor (Camden, N.J.) and Webcor, Inc. (5610 W. Bloomingdale, Chicago 39) showed tape recorders, phonographs, radios and the other audio instructional devices.

There was surprising lack of emphasis on television. There was information available on some cameras and associated equipment, one or two classroom TV receivers and antennae systems. But it seemed that after a comparatively few years television

equipment had reached a position of somewhat less importance.

The equipment stress at the NAVA exhibit was on language laboratories. There were no less than a dozen exhibitors showing and stressing their language laboratory equipment. This ranged from the comparatively simple to the utterly complex. The simplest involved opportunity for the student to hear from a central source (teacher tape or disc) and to repeat aloud hearing himself by mechanical rather than electronic means. The most complex involved all manner of audio activity, including hearing from the central source — or choice of central sources in multi-channel installation — and recording student reaction for either teacher or student criticism. In the latter each listening position is equipped with a selector switch, headphones, microphone and tape recorder.

Reactions varied. Some dealers viewing the most complex installations wondered first, who would make the installation and second, who would undertake maintenance. Others questioned the ability of schools and colleges to purchase such expensive equipment. Others asked about the use of space for such a set-up which may reduce available instructional space in already over-crowded schools.

Conversely, some dealers saw in the language laboratory as it was shown and demonstrated the ideal solution to many instructional problems, including student advancement at an individual pace, ample opportunity for self appraisal, extension of the effectiveness of the teacher through the use of recorded material and the introduction of variety in both method and material to make learning both more rapid and more interesting.

Teacher reactions varied, too. Some were aghast at the prospect of responsibility for such complex equipment. Those who had had experience using this specialized audio equipment in language instruction were sometimes enthusiastic but more frequently counseled caution and slow growth. There were those who seriously questioned the advisability of supplying each listening location with response-recording equipment. Would it be used frequently and effectively enough to justify the investment — and the more complex maintenance?

It was interesting to note that no one questioned the value of the intensive listening situation in learning. Some language specialists suggested that the language laboratory was a partial misnomer because the same techniques — precisely — could be just as effective in other areas of instruction including grammar, literature, history, music — in fact throughout the curriculum.

City and State .....

It occurs to us that if the crash program in the training of scientists is essential perhaps the listening laboratory should be more widely employed in teaching physics, chemistry and biology. It is not inconceivable that every classroom should be equipped immediately for some form of independent, individual listening—and that a crash program to supply appropriate audio materials is the essential key.

In this regard there was one new development which fascinated us by concept. Some years ago Paul Reed, in an EDUCATIONAL SCREEN AND AUDIOVISUAL GUIDE editorial, suggested a portable audiovisual laboratory. This was to be mounted on wheels for easy transport, and was to contain a single audio amplifier and such essential equipment as a motion picture projector, a record player, a tape recorder and a radio (AM/FM) tuner. The amplifier is common to all these machines and one amplifier could do the job for all. THIS MACHINE WAS ON VIEW AT CHICAGO—in an experimental model developed for the exhibition by the Kalart—Victor people. We don't know that this will ever be more than an experiment—but we hope sincerely that these folk from Plainville, Connecticut will develop this concept of audiovisual equipment more fully.

In this regard, is it not practical to supply each classroom with an audio amplifier as standard? Then the activating components (projector, recorder, tuner and record player) could be portable. Loudspeakers in this situation could easily and naturally, then, be standard classroom equipment and could be so located to give the best listening opportunities. Add to this a simple jack arrangement so that a single headphone set—or a multiplicity of headphones can be used for individual or group listening. We approach then the fundamental of the listening laboratory—and make the equipment immediately available to every classroom.

Such an arrangement, let us hasten to say, does NOT erase the need for other audio equipment. The situation may well arise—and probably will arise—in which a majority of the students will be viewing a film or auditing a recording—while one or a few may be using independent audio equipment, also with headphones, for entirely different purposes.

This, then, is the beginning. Certainly this NAVA demonstration is not the 'end' and we have not reached the audio millenium. Indeed, we are just beginning to use the audio devices to their greatest advantage in instruction—and we are yet to supply the essential

instructional materials. Perhaps next year they'll be shown in greater number and variety.

In any case, we'll continue to "keep an ear to the ground" for you.

Do you have a student in Plane Geometry who needs help? Does that student need a "quick review" or a bit of pre-examination "cramming"? The outright reading of the axioms and postulates offered on the recording "Plane Geometry" (Audio Educational Aids, Box 250, Butler, Missouri) may be useful. This record reviews, in

something less than an hour, practically an entire high school course in Plane Geometry. Following the reading of the axioms and postulates the student is introduced to the theorems. These are read as statements, suggestions are offered for their proof, and then they are reread. Geometric terms are stated and defined and suggestions are offered for solving a variety of problems.

This is a good presentation of fundamental data. To understand the recording, the student will have to have had considerable previous training in the area. No visual material accompanies the disc, and it is hardly intended as a "do-it-yourself" course—nor should it be used that way.

*Audiotape "speaks for itself" in a spectacular recording  
—available in a money-saving offer you can't afford to miss!*

**DETAILS OF THE PROGRAM**

The program includes these colorful selections:

- Tschaikowsky .. Russian Dance
- Sibelius.....from Finlandia
- de Falla..... Dance of Terror, Ritual Fire Dance (El Amor Brujo)
- Brahms.....from Symphony No. 4 in E Minor
- Khatchaturian.. Saber Dance
- Stravinsky .....Infernal Dance, Finale (Firebird Suite)
- Beethoven..... Ode to Joy (Symphony No. 9 in D Minor)

**DETAILS OF THE OFFER**

This exciting recording is available in a special bonus package at all Audiotape dealers. The package contains a 1200-foot reel of standard Audiotape (on 1½-mil plastic base) and the valuable "Blood and Thunder Classics" program (professionally recorded on standard Audiotape). For the entire package, you pay only the price of two boxes of standard Audiotape, plus \$1.

HERE's a reel of musical excitement that belongs on every tape recorder. "Blood and Thunder Classics" is a program of great passages of fine music, specially selected to show you how vibrant and colorful music can be when it is recorded on Audiotape.

"Blood and Thunder Classics" is available RIGHT NOW from Audiotape dealers everywhere. (And only from Audiotape dealers.) Ask to hear a portion of the program. Then, take your choice of a half-hour of rich stereo or a full hour of monaural sound—both at 7½ ips. Don't pass up this unusual opportunity.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

"Health in Our Community," Encyclopaedia Britannica Films

## Health In Our Community

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 13 minutes, 16mm, sound, black and white, 1959. \$75.

### Description

*Health in Our Community* gives insight into the relationships among the functionaries in the community health program as they cooperate to detect communicable diseases in the early stages, isolate and treat sickness, administer preventive medicine, enforce sanitary conditions in public places, and prevent the spread of contagious diseases throughout a community by quarantine. This presentation introduces an intermediate grade girl in a familiar situation with which the audience can identify, and portrays sequences to organize and explain the diverse but related duties of community health fighters.

The camera pans the classroom of busy pupils and comes to rest on Betty, who is ill. The teacher takes Betty to the school nurse. Seeing some unusual red spots, the nurse sends Betty home, having diagnosed her illness as measles. At home the doctor visits Betty, confirms the nurse's diagnosis, and tells her to stay in bed while she recovers. Meanwhile the doctor writes

a report to the department of health telling of Betty's contagious disease and her isolation for treatment.

Dr. McNally, the head of the department of health, reads the report of Betty's illness and has it filed in a drawer labeled "Contagious Diseases." The narrator explains that these kinds of diseases should be isolated for treatment, and the following scene of a conference comes on the screen while the narrator continues to explain the cooperation among family doctors and the health committee to find and isolate contagious diseases to keep them from spreading.

The next sequence deals with prevention of diseases by vaccination and enforcement of sanitation. This is illustrated by the vaccination of a small boy. The narrator explains that and the working of the laboratory where tests for dangerous germs are made and studied. Following scenes deal with the inspection and testing of milk and water samples in a laboratory.

The ominous tones of the music rise and a shot of a kitten scrounging in a filthy alley that is littered with waste and garbage is shown. The dangers of spreading disease germs here are obvious and the work of the health departments in controlling them is pictured.

Following a transition from a

crowded city street to scenes of the community — children and their mothers at a meeting with the town's doctors for examination of children, a special class for handicapped children, a man getting a chest x-ray, and a nurse visiting a home-bound patient — represent the civic cooperation of the health fighters to detect diseases and point up some of the health services of the community.

Reports of a case of typhoid fever set off a rapid inspection. The typhoid carrier is located and treated. The narrator explains how a man innocently infected the patients, even though he, himself, was not ill. The carrier having been found, the points on the city map which located the danger spots are removed to signify the end of a crisis and the tempo of the film returns to normal. Betty recovers from her measles and the doctor certifies that she is well. Next is shown as she reports to school and is enthusiastically welcomed by her friends. The pupils in the audience are challenged in the next sequence to do their parts in guarding community health. They are advised to keep a clean house and town, and stay in bed when they have a contagious illness.

The ending sequence relates the familiar policeman and fireman, who fight to protect citizen's rights, to the laboratory technician, the doctor, the nurse, and the whole staff of a health department that fight germs and diseases. The closing shot pictures a smiling, healthy girl walking down a city street as the narrator tells that all are fighters to make your town and Betty's a happy and healthful place to live.

### Appraisal

*Health in Our Community* serves to focus the activities of the workers in the departments of health, the community volunteers, and the medical profession around a systematized effort to protect the health of the community. Elementary children should understand the presentation and get some insight into the relations among various occupations that comprise the public health program of a community. The film also indicates that each person has a responsibility to cooperate in keeping the community free of contagious diseases.

The integration of activities at a relatively simple level of explanation, the use of pertinent visuals and ap-

appropriate music effects, and the changes of pace for dramatic effect are strong points of the film. Although the vehicle of the film story was not followed through and its transitions sometimes lacked smoothness, the total effect of the film is pleasing and its message is clear.

— William A. Wheeler

## Insect Foods

(Pat Dowling Pictures, 1056 South Robertson Boulevard, Los Angeles 35, California) 14 minutes, 16mm, sound, color, 1959. \$135.

### Description.

*Insect Foods*—through use of close-ups of insects, descriptions of their life cycles, and their characteristic feeding habits—presents an opportunity to observe a number of insects found commonly throughout America and points up the fact that insect feeding habits are of great economic importance to man.

A katydid, for example, is shown feeding on a leaf, but the film indicates that even though katydids have a tremendous appetite they are not an economic problem because birds and other small animals eat them, thus

controlling their numbers.

Next, the larvae of a beetle are pictured feeding on stored grain. The film then pictures the dormant, pupal stage. It shows adult beetles in the grain and describes them feeding and reproducing to start again the life cycle of this insect pest. The larvae of the Polyphemus moth are shown devouring leaves; then close-up views feature, its suction-like feet. The narrator points out that the larval stage is well camouflaged. It shows the caterpillar of this moth spinning its cocoon. Through a window cut in the cocoon the caterpillar can be seen undergoing metamorphosis. The exterior of the finished hard, leathery cocoon is also depicted. The sequence is completed by showing a mounted, adult Polyphemus moth.

The film continues picturing a wasp moth as it lays its eggs. The hatched larvae are shown feeding by boring in a living tree; the life cycle is completed by the adult which emerges from the pupa. Termites are shown as they tunnel through a dead log on the forest floor thus helping to speed its decomposition. So, these insects, which are thought of as being harmful, assist in the vital process of soil formation. Larvae of the carpet beetle are household pests but they also have useful

activities. The film pictures a number of these larvae feeding on a dead butterfly, eventually reducing it to dust. This enriches the soil which helps to support the plant and animal life that is yet to come. The adult of the clothes moth is shown as the narrator indicates that this insect has a well earned bad reputation; however, not the adults but the larvae do the damage. Larvae are shown as they feed on woolen material. Following is a close-up of adult fleas and then a cat being annoyed by them. The film shows the larvae on the dead hair of a rug and the pupal stage of the flea.

A praying mantis is shown in its characteristic pose as it captures a fly. The mantis is useful because it preys upon harmful or annoying insects; however, occasionally, it will feed upon beneficial ones, such as bees. The last insect shown is the interesting ant lion. A microscopic view of its powerful jaws is shown; then it is pictured digging its conical pit in the sand. An ant falls into the pit and is immediately caught in the ant lion's waiting jaws.

The film concludes by telling that every plant and animal in the entire world provides food for some kind of insect.

"A prism derives its name from the shape of its base."

Junior High — High School

18 minutes

## DISCOVERING SOLIDS

A series of three films applying mathematics principles to space perception.

- I VOLUMES OF CUBES, PRISMS, AND CYLINDERS
- II VOLUMES OF PYRAMIDS, CONES, AND SPHERES
- III SURFACE AREAS OF SOLIDS

Art, animation, and model demonstrations help develop formulas for finding volumes and areas of solids. Live footage shows the use of these formulas in practical situations.

Carefully produced under the supervision of Dr. E. H. C. Hildebrandt of Northwestern University's Department of Mathematics, these films meet the demands of the revitalized mathematics curriculum.

**Appraisal**

*Insect Foods* does an admirable job of presenting familiar insects and their less familiar feeding habits. Its absorbing content coupled with its technical excellence will hold the attention of an audience range from primary children through adults. In the schools, it will probably be most useful on the intermediate and junior high level with some use in senior high; however, in addition, farm groups will be interested in its economic implications and householders in its presentation of the habits of fleas, clothes moths, carpet beetles and termites. Since several examples of complete metamorphosis are given, a secondary purpose of the film could be to present the life of certain insects. Also, it shows that some insects, such as, termites, commonly thought of as being only destructive, have very useful functions in their natural habitats. This may help to quell the desire of many people to spray, squash, or "skedaddle from" all insects, whether primarily beneficial or harmful.

— George Vuke

**Explaining Matter: Molecules In Motion**

(Encyclopaedia Britannica Films, Inc., 1150 Wilmette Avenue, Wilmette, Illinois) 11 minutes, 16mm, sound, color or black & white, 1958. \$120 or \$60.

**Description**

The film demonstrates evidences of the existence of molecules and relates the characteristics of solids, liquids, and gases to molecular motion. Using time lapse photography, the film shows the loss of water from a glass during a week. Animation is used to explain the abstract process of evaporation.

Water is used to illustrate the characteristics of a liquid as the film shows water assuming the shapes of various containers. Ice demonstrates the characteristics of a solid, and the relationship of the solid and liquid states to molecular motion is shown as the ice is melted. The film uses boiling water to show the transformation of a liquid to a gas. These changes of state are defined as physical changes resulting from the increase or decrease of molecular motion.

Pressure is demonstrated as heated air blows the cap off a glass jar. This leads to the definition of pressure as the force of molecules against a surface. Increasing pressure by adding more molecules is portrayed as a balloon is blown up. The relationship between molecular motion, physical state, and heat is further emphasized through the use of dry ice, solid carbon dioxide, and liquid air.

The film ends with the generaliza-

tion that molecules are known to exist from their motion, and that molecular motion explains the solid, liquid, and gaseous states as well as pressure.

**Appraisal**

*Explaining Matter: Molecules in Motion* provides a simple introduction to the concepts of the status of matter and the results of molecular activity. The use of simple animation makes it possible to better understand the actions of molecules and to infer their presence from the evidences of their actions. The film is strengthened through its use of materials common to the everyday experiences of its audience. It will be useful in the intermediate grades as an introduction to the study of molecules, as an aid to the growth of understandings in the unit, and as a summary. *Molecules in Motion* is the first of four films in the series *Explaining Matter*.

— Merlyn Herrick

**Rescue Breathing**

(American Film Producers, 1600 Broadway, New York 19, New York) 22 minutes, 16mm, sound, black and white, color, 1958. \$110, \$200.

**Description**

*Rescue Breathing* provides a series of dramatic demonstrations of accidents in which a person's natural breathing is unable to function, and uses laboratory experiments and animation to explain the theory of mouth-to-mouth breathing.

As an ambulance hurries through the city and arrives at a home only in time to remove the body of a suffocated woman, the narrator poses the opening question — "what would you do if found near a person needing help to restore his breathing?" To demonstrate this method, which is a more efficient means of resuscitation than the older arm-lift method, a re-enactment of the laboratory research on rescue breathing is shown. In this portrayal a volunteer doctor has received a dose of curare, paralyzing him to the extent that he can no longer breathe. A nurse tilts back his head, pulls his lower jaw out to remove the tongue from its blocking position over the air passage at the back of the throat, pinches his nostrils closed with her other hand, and places her mouth over his to blow in rhythmically the air needed to keep him supplied with sufficient oxygen. A large scale oxygen meter shows the content of oxygen in the blood during a no-breathing spell when the arm-lift method is applied, when using an oxygen mask, and when the mouth-to-mouth rescue

breathing is used. In the first two instances the oxygen count drops fairly rapidly, while during using either the oxygen mask or rescue breathing the oxygen content of the blood is maintained at a near-normal level. Animation is used to point out more clearly what takes place when using the rescue breathing method.

Typical situations in which rescue breathing can be utilized are enacted. A scoutmaster rescues one of his boys from drowning, a doctor revives a victim of automobile exhaust, a wife saves her unconscious husband who received a severe electrical shock while using an electric drill, and a school girl rescues her little sister who is choking on a part of a burst balloon. Similar action restores a wounded soldier in battle and a woman suffering from an overdose of drugs.

Specific points are stressed throughout the description of rescue breathing. No more than twelve to fifteen breaths per minute need to be given to revive an adult, and twenty breaths per minute to an infant. Air breathed into the stomach can be removed by applying a slight pressure to the stomach. The rise and fall of the chest should be watched for signs that the individual is receiving air. Return of skin and finger nail coloring are signs of revival.

In the closing scenes of the film the basic steps in rescue breathing and important points that must be kept in mind are reviewed.

**Appraisal**

*Rescue Breathing* makes available a much desired film for teaching this technique to persons from the junior high level to adults. The previewing committee feels that this production will be of special interest to teachers of first aid classes, safety classes, boy or girl scout groups, industrial training classes, swimming classes, and parent groups. Of particular interest are the re-enactments of actual situations in which the mouth-to-mouth rescue breathing was used to revive the victims in various near-fatal circumstances; since live demonstrations of this method are not practical the film answers a definite need in classes concerned with first aid techniques. The clearly demonstrated steps prepare any group for immediate action in this life-saving procedure.

# AV IN THE CHURCH FIELD

by William S. Hockman

"The Harvest," National Film Board of Canada

## A Producer Explains

Since January 1st, 1959, Miss Ardis Kresensky has been Director of Religious Productions for Eye Gate House, Inc., Jamaica 35, N.Y., and occupied in part with the development of a series of four filmstrips for Primary and Junior children entitled, "The Story The Bible Tells." I would like to share, with her permission, several short paragraphs from our correspondence. First on the function and character of the artwork:

"I had quite a time figuring out whether the artwork was too representational. It is representational, of course, and it doesn't always communicate theological meaning. But, it always helps tell the story. The pictures communicate a good deal of emotion through facial expression, gestures and settings. They won't obscure the meaning unless the story obscures the meaning by too much entertainment, or, by losing itself in individual incidents and details. It is the *story* we are trying to tell."

A grand sweep is undertaken in these filmstrips—*In The Beginning, God's People, The Christ Child, and Jesus Our Savior*—and such a statement of what the Bible tells in this broad-brush way is needed. When the question of 'interpretation' was

brought up, Miss Kresensky had this to say—and I liked it very much:

"We want to tell it with 'no comment' as much as possible. Of course, all interpretation is 'comment', and we can't avoid interpretation as long as we are trying to bring the stories within the understanding of the Primary child (by using 'shame' and 'God couldn't trust them any more', and 'It's all right now' instead of 'Go in Peace'.")

It seems acceptable interpretation. Unless such a procedure is permissible and possible, what chance have we of communicating this body of information to the younger children? She continues:

"But as long as the central theological truth is left intact, even though it isn't fully expressed, I think the best thing we can do is to tell the story as clearly and as simply as possible. If the only questions that arise are the important questions that arise from the Bible itself, then I think we've done the job. Where did the tempter come from? Does anybody know? But there he is."

On the question of halos in the artwork, we have this reply:

"We are going to take a chance on halos. Although almost all of our teaching pictures these days do without them, there are still halos on the Old

Masters, and even on something as relatively modern as Vichon's 'Christ and The Children'."

And we hope that she is right in this. We shall look forward to seeing and reviewing this new series, obviously being made with intelligence and great care. — WSH

## Rural Erosion

*The Harvest* is a 30-minute B&W dramatic motion picture about a minister in a rural community, and the social erosion he faces in his people and in himself. Keyed to this year's study of Town and Country by the churches of America, this film has much to say both to city and rural congregations. It holds the mirror up to both: to the first to ask if they are helping; solve the problem of an adequate ministry for the rural areas; and, to the latter to ask if they are doing enough to help themselves. Produced by the National Film Board of Canada, it is available from the BFC of the NCC and from local rental libraries. Excellent treatment of subject; dramatic; realistic; and with good general qualities. Highly recommended. Rental \$6.00.

## Emerging Africa

With the press headlines as they are it is fitting and timely for the churches of the U.S. to be studying Africa and her peoples this fall and winter. It is good to have a fine film to aid in this study, and in *New Faces Of Africa* the National Council of Churches, through its Broadcasting and Film Commission, has produced an outstanding film. The content is excellent, the photography fine, and the whole production has a nice professional gloss.

Its excellence begins with the general continuity narration. It is done by an African, a handsome man and a very ingratiating personality, Dr. Mungai Njoroge (Moon-guy Jo-ro-ge). Born in Kenya, inspired to work for his people by a missionary, Mr. Njoroge arrived in the U.S. in 1951 with a bachelor's degree in hygiene and little else. In 1959 he returned to his home, a graduate in medicine of Stanford University, an excellent command of English, and with two years internship in two outstanding medical centers.

What does he say of emerging Africa? "Poverty, ignorance and disease

are the great problems in Africa. But there is another—finding a faith to live by. Without it, even independence will not be true freedom." So, he will give his life to faith and medicine!

In this 29-minute color and or B&W film Africans speak. A pastor tells of his strong and self-reliant church; a nurse tells of her upbringing, training, present work and hopes for Africa; a chieftain tells us of changing old economic patterns into new ones; an office worker in Leopoldville tells us why he can never again be content to be ruled from a European capital. An African editor speaks; brilliant, young and mission trained Tom Mboya tells us of self-government and independence. This is good. So often have others spoken for Africans. Now we hear their story while seeing them, their people, their cities, their way of life via fine photography. What if their English is not as clear as your ear is used to. This only adds an authentic note. Here is a superior film. Let's use it to the full: with youth, adults and if care is taken, with Juniors as well. From your AV dealer. (See cover of June issue.)

## Rembrandt Film

If you are looking for a program for mature adults of your church, club, or community why not try giving an hour to the artist Rembrandt, whose 350th birth anniversary has brought forth new books and new films? Why not a 15-minute review of the book "Rembrandt and The Gospel," by

W. A. Visser 't Hooft (Westminster Press), plus the 14-minute color film *Rembrandt: Poet of Light* (from International Film Bureau, 57 E. Jackson Blvd., Chicago 4; \$4.50 rental), plus a 15-minute forum on his life, religion and art? The film can be counted on to do its part well.

## Filmstrip Notes

It is one thing to show children about growing plants, about growing animal babies, about things around you, even about the land, the sky and the heavens, and then quite another thing to stimulate them to find out about these things for themselves. We suppose when science is presented to grades One and Two that the accent will need to be on showing and telling rather than upon investigation and finding out. It was, perhaps, this "finding out about" in the first half of every title in SVE's *Basic Primary Science—Group One* that bothered us. Again, we thought that here would be the place for some fine color photography, and instead we are given full-color original art. I have no objection to the captions. They get the job done, better than the art. On the look-out for nature materials useful in the lower grades of the church school, in vacation church schools, and in week-day schools, I wish that I could be more enthusiastic about this series of six. I find it only acceptable for use in the church school. From SVE; \$4.50 each; \$24.50 complete and boxed; write for descriptive materials.

## QuoVadis — Church Audiovisuals?

by William F. Kruse

Whither goeth — church AV production — distribution — evaluation — utilization — communication? Some thirteen years ago Rogers and Veith<sup>1</sup> raised the same questions concerning the status and development of the motion picture in the service of the church. They suggested that this development had moved in what they called three "waves" — 1895-1919; 1920-1930; and 1931-1946, their time of writing. Disregarding some room for question as to the exact dates chosen as division points there was logic in these time zones. From the invention of the motion picture until the early '20s churches had practically no films other than those from the theatrical field; the '20s and early '30s

saw a start made in production directly for church use; and by the mid-'40s the interdenominational Religious Film Association was distributing some 250 films, most of them technically acceptable by the non-theatrical standards then prevailing.

Today, these materials have increased more than ten-fold, and the number of producers has more than trebled. The religious film field represents an annual budget of \$13,900,000<sup>2</sup> for production, distribution and equipment. A single denomination reports expenditures of over \$6,000,000 on its television film program during eight years of telecasting.

Virtually universal recognition prevails of the importance of audiovisuals

but some questioning also as to whether the right materials are being produced for the right purposes, and, even if so, whether they are used to proper advantage. The time has come once more to take stock of where we stand, whence we have come, and whither we are going.

### Wanted — Facts

This stock taking must be more than a pleasant meeting of minds or subjective exchange of generalities. Fifteen years of "Green Lake" and innumerable seminars on denominational and/or regional scale have helped us clear our thinking, appraise our needs, develop our skills. The areas in which a dearth of films was noted by the workshops of a decade or so ago are now for the most part supplied. The Methodist seminars (1916-7) which brought together each year some two score invited AV leaders and resource experts for a three-week period of study and discussion listed among these areas — Bible, Jesus, Paul, Christian family, evangelism, stewardship, witness, missions, church vocations, skills, arts, and the special interests of children, youth, teens, and parents. In the opinion of producers and denominational leaders alike there are more materials today in each of these areas than are being put to effective use.

### Who Uses What — and Why — and How?

Just how much are they being used? How effectively? For what purpose? By whom? The time has come for basic factual research into the patterns of producer-distributor-user relationships. Research — not opinions, not guesses, however qualified or self-assured may be the guesser. So many of us are there who "know" so much that may not really be so at all.

The basic data are readily available in the records kept by the producers and by wholesale and retail distributors. It will cost money to gather, collate, analyze and interpret them. But valid policy and program can be built only on a solid factual base. A statistically valid data format, once the questions and issues are clearly defined the material on which answers are to be based may come at relatively low cost from the sources themselves. The costs of collating and analyzing would not be too heavy if shared by the chief likely beneficiaries.

### Wanted — Research . . .

A consideration of the extent and methodology of research in audiovisual education in school and government service, and recently in mass com-

munication and educational television, would reveal how far the religious AV field lags in this respect. Less than one percent of the degree dissertations on AV topics deal with church applications and even most of these theses are very narrowly conceived. It is time to remedy this.

### . . . on the Local Church Level

There is need for a thorough motivational research program on the local church level to find out why certain materials were selected and by whom. Why not others? Was it because of some published evaluation, such as the Audio Visual Resource Guide or Educational Screen's Church Department? Did the user's experience bear out that evaluation? Always? When not, why not? Where was the material used? How? When? For what type audience? With what effect — in the opinion of the leader? User group reaction? Comments? Would it be used again? For the same purpose? Same audience? Different purpose and audience? When? Why?

Does the local church feel it knows how to use AV material effectively? If not, what kind of know-how is lacking? How could it be supplied? By whom? How? In the opinion of William S. Hockman there is less grass roots know-how than ever before, partly because of excessive turnover in church workers, including the audiovisual chairman.

### Who Is the Church Audiovisualist?

How many churches have one? Who is he? What does he do? How was he selected? What are his status symbols? What is his background in church work? What is his relationship to the DRE — how often is he the same person? Relationship to the minister? To other church leaders? What does the AV chairman think of his own function — and functioning?

### And What of "Curriculum"?

To what extent is curriculum integration of AV materials actually practiced? Under what guidance? How strictly? Has, perhaps, the heavy unqualified emphasis on curriculum produced a side-effect of deriding and eliminating *all* use of motion pictures, etc., for fund raising, recreation, attendance boosting, "baby sitting" or other secondary applications of certain types of film? Does the primary curricular use of AV ban completely such periphery uses?

### Are Audiovisuals Today Technically Good?

Clergymen are known still to argue that if there were "good" films and

filmstrips they would be more likely to use them. What is a "good" film? Good for what? For whom? Says who? Why? If, by "good," *content* is meant, what are today's faults and what the sources of improvement? If *technical* quality is meant the same questions apply. Hockman states that "clergy say 'get quality up,' not knowing that it is way above where they think it is."

What of the alleged "Hollywood influence"? Is it good or bad? Or partly both? In what way? The pros and cons were discussed at least as far back as 1946, at Emory, when Dr. Frank M. McKibben put it thus:

"We may do many things in this field of our own. But it is altogether likely that we will be compelled to draw upon the technical skill and superb artistry of Hollywood to accomplish the ends we seek. *We shall need to learn the method of indirection in securing certain ends.* (Original emphasis). We are apt to try to do in this field what we have unwisely done in story telling. Not content to tell a story and let it do its own teaching, we moralize before and after we have told the story. Children quickly build up a defense against such procedure."

Any number of the films and other audiovisuals produced for church use now draw on this "Hollywood" skill and artistry. Is this "good"? Bad? How? Why? Again — who says so — and why? Does this apply more particularly to films custom-made for a specific denomination? Or to materials produced for broad interdenominational use? There is now enough "Hollywood" as well as non-Hollywood product for comparison, and broad enough audiences for research.

Much of current production is aimed at television, a field untouched in 1948. Many television productions subsequently go into group audience circulation. Are the two media wholly compatible? What do church audiences think about this? What do religious film library booking records show?

Producer, distributor, dealer, user — all have a vital interest in getting dependable significant facts. Only on the basis of well-founded factual data can we know even *what questions* to ask. Once we have the questions we will be able to get and to think about the answers. And — perhaps even act on them.

# FILMSTRIPS

by Irene F. Cypher

## Living in the Soviet Union Today

(7 strips, color; produced by the Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$39.75 per set, \$6.50 single strips.) Although it is much easier to arrange to travel in Russia today, relatively few Americans have as yet made extensive trips to this country we need to know more about. The producers of this series have drawn upon the photographs taken by twelve who did visit Russia in 1957 and 1958, and the result is a rather comprehensive pictorial account of home and school life and activities, agriculture and farming, shopping facilities, resources and transportation in modern Russia. Attention is focused on the cities of Moscow, Kiev, Leningrad and Tashkent. We see famous buildings, typical street scenes, recreational facilities and general activities. We become aware of the many contrasts among the people; the scenes and activities are those which appeal both to a photographer and to a student of social conditions. There is a friendly feeling to the series, and it seems less stilted than some regional geography materials. Perhaps this is because the pictures have human interest and show plenty of people going about their daily tasks, rather than merely presenting a series of buildings. It is material to be recommended for use with any class or group wishing to know more about what life in Russia is like today.

## The St. Lawrence Seaway

(Parts I and II) (single strips, black and white; produced by Visual Education Consultants, 2066 Helena St., Madison 1, Wisc.; \$3.75 each.) The current year has seen the opening of a great new sea lane which makes it possible for boats of all kinds to come directly from the Atlantic ports to Montreal and on to great inland ports such as Duluth. Part I of this set, "Natural Obstacles," shows us the work which had to be done to overcome natural geographical obstacles to this project. Part II, "Building the Seaway," outlines the steps taken in carrying out the actual construction work. The information is timely and the details included important for understanding the full value of this great

waterway to both Canada and the United States and also to world shipping interests.

## Understanding Poetry Series

(6 strips, color; produced by Popular Science Release, presented by McGraw-Hill Book Co., 330 West 42 St., New York 36, N.Y.; \$32.50 per set.) Really to appreciate poetry and the part it plays in our lives demands some understanding of the elements that enter into the writing of a poem. This series analyzes the part played by figures of speech, sound effects, rhythm, stanza and verse forms, and how to set about writing poetry. Diagrams and drawings direct our attention to the importance of similes, metaphors and metonymy; metrical foot, iambus, trochee and dactyl are all illustrated for us, and stanza, octave and sonnet are explained. We could wish that a record had been made to give greater effectiveness to the units on sound effects and rhythm; so much of the enjoyment of poetry is enhanced if it is expressed properly when read aloud. The series is well adapted to work in high school and college literature and writing courses.

## Picture Book Parade Filmstrip, Series II

(8 strips, color; produced by Weston Woods Studios, Inc., Weston, Conn.; \$42 per set, \$6.50 single strips). It is always refreshing to find some new story material available in visualized form. In this instance the stories are "Little Toot," "Caps for Sale," "Andy and the Lion," "The Circus Baby," "The Biggest Bear," "The Camel Who Took A Walk," "Lentil," "The Little Red Lighthouse." Booklets provide the complete story texts, and this material can be used many, many times. Children enjoy hearing stories read over and over, and this fact should be remembered when using story filmstrips. They should be encouraged to provide the story narration on repeated showings, and each viewing of a filmstrip can be made an occasion for very pleasant language work. In the original storybooks the illustrations were attractive, and this same quality has been retained in the filmstrips.

# SIGHT PLUS SOUND PLUS THE ECONOMY OF 8mm FILM...

Complete with microphone, in handsome fabric-finished case, **\$399.50**

## with the **ELITE** 8mm SOUND-ON-FILM PROJECTOR

With the Elite, your students learn more, learn faster, learn more thoroughly. That's because the Elite enables you to add any pertinent sound track—voice, music, or both—to economical 8mm film. Student interest and retention are tremendously heightened; costs are kept to a minimum.

**Think of the convenience!** You can show the same film to junior grades in the morning that you show to more advanced grades in the afternoon, keying the sound track to the level of understanding of each grade. You can erase and re-make the sound track as often as you wish, with full brilliance and fidelity. And, the Elite is so rugged, so fool-proof and simple to operate that you need no specially trained personnel.

## Tandberg **5** 3-SPEED, 4-TRACK STEREO RECORDER — PLAYBACK

**JOHN BROWNLEE teaching with NORELCO Tape Recorder:** The world-famous Australian baritone, beloved "Don Giovanni" of the 1930's and 40's and now Director of the MANHATTAN SCHOOL OF MUSIC, tape records with his NORELCO 'Continental' a difficult passage sung by pretty student JUDITH INGRAM. Afterwards MR. BROWNLEE played back this section of the tape to show his pupil precisely what needed further vocal polishing. "A high-quality tape recorder enables the teacher to let his pupils hear themselves as others hear them," says MR. BROWNLEE. "I find my NORELCO 'Continental' three-speed tape recorder an extremely versatile teaching tool, especially as it is capable of outstanding faithful, undistorted reproduction of vocal and instrumental timbres." The NORELCO 'Continental' is a product of North American Philips Co., Inc., High Fidelity Products Division, Dept. 1S9, 230 Duffy Avenue, Hicksville, Long Island, N. Y.

# Trade News

## Dowling Shoots Ektachrome

Current Pat Dowling educational films are all being shot on the new Eastern Ektachrome film; release prints are on Eastman color positive. The increased speed makes for more pleasing scale of light and shade in exteriors, and for greater latitude in lighting interiors.

## Admaster Expands

The entire building at 1168 Sixth Avenue, New York, has been taken over by Admaster Prints, Inc., producers since the middle '40s of slides for overhead projectors and other visual presentation services. Same day service and volume mailing facilities are offered.

## Three New Veeps at B-B-C

The growing interest at Brunswick-Balke-Collender in the school equipment market is reflected in the appointment of three vice-presidents to direct the School Equipment Division. One promotion goes to D. E. Warner, heretofore general sales manager; W. M. Miller takes charge of marketing; and J. W. Scalise, heretofore works manager, becomes vp in charge of manufacture.

## Print Damage Policy

McGraw-Hill announces a 25 per cent allowance on replacement orders for replacement of damaged or worn print of the same title. Replacement footage for do-it-yourself insertion, minimum order 10 feet, color 35 cents per foot, monochrome 15 cents. All measurements are from leader start mark, or first frame of main title, or last frame of "The End."

## Animation via Rotary Polarization

American Optical Co., by arrangement with Technical Animations, Inc., has adapted the principles of rotary polarization to the "animation" projection of transparencies in overhead, stereopticon or trans-illuminated display devices. It is claimed that this makes it possible to add any flow motion, in any direction and at almost any relative speed, any rotational or radiating action or other spectacular pre-designed effects, by adding the proper strip to the area desired to be animated.

## Film Factor in National Survival

So says Maurice B. Mitchell, president of Encyclopaedia Britannica Films, in narrating new service-instructional film, "The Unique Contribution," 35 minutes, sound, color, available on free loan. The film goes over much of the material presented by Mr. Mitchell at two Congressional hearings prior to the adoption of H.R. 864, and contains numerous excerpts from EBF films.

## Ups Leslie

Orr Industries, Inc. (note new corporate name) has named John M. Leslie, Jr., executive vice president in addition to his duties, continuing, as general manager. Prior to August 1958 he was with Ampex.

# SYLVANIA CERAMIC BLUE TOP

PROJECTION LAMPS... for all makes... all types... in all sizes

Use a Sylvania Ceramic Blue Top in your projector... your slides and movies deserve the best!

New Sylvania Ceramic Blue Tops are available in all standard sizes for any projector... to fill your exact requirements for clear, brilliant projection.

**Blue Tops offer these superior qualities:**

**Brighter**... Ceramic Blue Tops won't scratch, chip or peel like ordinary painted tops... machine-made filaments assure pictures bright as life.

**Cooler**... Ceramic Blue Top is bonded to the glass for improved heat dissipation... cooler operation assures longer lamp life.

**Longer Lasting**... Exclusive Sylvania shock-absorber construction protects filaments from vibration damage.

# CHART-PAK Transparent Tapes made this projectable chart in 12 minutes 15 seconds

**HOW LONG  
WOULD IT TAKE  
YOU TO  
DRAW IT?**

CHART-PAK printed and solid color transparent tapes are specifically designed for audio-visual presentations on overhead projectors. They're ideal for maps, charts, plant layouts, transparencies and slides, as well as for identification. Will not obscure material underneath. In red, blue, green and yellow, precision slit 1/32" to 1" wide, with pressure-sensitive adhesive backing guaranteed not to melt. Write for full details or see your Chart-Pak dealer. He's in the Yellow Pages under "Charts-Business."

**CHART-PAK saves time... saves money!**

## CHART-PAK, INC.

ORIGINATOR OF THE TAPE METHOD OF DRAFTING

129 River Road, Leeds, Mass.

## Blueprint "Oscar"

The International Association of Blueprint and Allied Industries has started an annual achievement award in the form of a gold statuette, created by the designer of Hollywood's famed "Oscar." First winner—Joe W. Coffman, president of Technifax Corporation. As in the case of NAVA, manufacturers such as Technifax are non-voting members of the Association.

## Triple-Screen Travel Show

A 3-projector, 3-screen show (total screen area 36 x 12 feet) will be a highlight at the national convention of the Photographic Society of America, October 9th, at Louisville, Ky. So sure is photographer Don Nibelink, of the pictures he is going to get on each day of his pre-planned schedule that he has made up all his titles in advance.

## HELPFUL BOOKS

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgar Dale. 384 pp. 1400 illustrations. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$15.00.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Walter Arno Wittich and Charles F. Schuller. 570 pp. 249 Illustrations, 14 Color Plates. Horner & Brothers, 49 E. 33rd St., New York 16, N.Y. 1957. \$6.50.

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgor Dale. 544 pp. Illustrated; and with 49 full-color plates. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$7.75.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Eleventh Annual Edition, 1959. Educators Progress Service, Dept. AVG, Randolph, Wis. \$6.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Halsted, M. A. Fifth Annual Edition, 1959. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 19th Annual Edition, 1959. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**MITCHELL'S MANUAL OF PRACTICAL PROJECTION.** 450 pp. Illustrated and cross-indexed. Covers every aspect of motion picture projection. Material presented in easily understood language — not too technical, yet technically accurate. Most complete and practical handbook for projectionists ever published. International Projectionist Pub. Co., 19 West 44 Street, New York 36, N. Y. \$6.00.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation. By William Lewin and Alexander Frazier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$2.95 an approval.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Alpark Educational Records, Inc., 40 East 88th Street, New York 28, N. Y.

## TRADE NEWS

William C. Stuber

### In Memoriam — William C. Stuber

William C. Stuber, the man who succeeded George Eastman as president of the Eastman Kodak Company (in 1925) died on June 17, at the age of 95. One of the foremost pioneers of the photographic industry, Stuber was noted for his unmatched knowledge of photographic emulsions and other basic technological aspects of the photo industry and the fields it served. He joined Eastman in 1894, retired as chairman of the board in 1941, after 47 years of active executive service. On his retirement in 1941 he was elected honorary chairman of the board.

### Holiday Abroad for Best New Use

An all-expense holiday trip for two to Brussels and Paris is the prize for finding the best new use in industry of Beseler's "Slide-O-Film" transparency film, now available in width up to 18". Entry blanks at photo stores, or from the Charles Beseler Co., 218 S. 18th St., East Orange, N. J.

### British TV Camera Here

The Marconi Mark IV camera and the tubes made by English Electric Valve Company, Ltd., are to be distributed in the United States by Ampex. The 4½" image-orthicon tube in the British-made camera reportedly makes for better videotaping than the 3" tube of the American made cameras. It is reported that all controls affecting picture quality of the Marconi Mark IV camera can be located in the control room, leaving the cameraman free to concentrate on photography.

### Enter the "Shortstrip"

Audiovisualists have a new word to learn — "shortstrip." It was introduced last month in our Encyclopaedia Britannica advertisement of two series of short (14 frame) filmstrips in color that are designed specifically for individual viewing by students, just as a book from the classroom library would be read individually. The strip may be projected also for class discussion but emphasis in both the strip and in its accompanying lesson

material is on individual use in hand desk viewers. The first two series, each containing 12 titles, are "Exploring Wisconsin Science" and "Learning About People." Complete with plastic hand viewer the sets sell for \$19.90 each, extra strips \$1.66 each, extra viewers \$1 each.

### Sterling Offers Technicolor Catalog

A free color-processing catalog is offered by Walt Sterling Color Slide Woodmere, L.I., N.Y., via a stamped self-addressed envelope. Sterling, source of over 4,000 world travel color slide announcements appointment as a franchisee TECHNICAL dealer.

### 43 Videotapers

Forty-three educational television stations affiliated with the National Educational Television and Radio Center are being equipped with Ampex Videotape recorders paid for by a \$2,706,000 grant from the Ford Foundation. A similar installation at the NET center at Ann Arbor will select and speedily reproduce programs for its member stations.

### "Audio Record" Discontinued

After more than 13 years of publication, Audio Record is being "put out to pasture," according to an announcement by Audio Devices, Inc. Although, it is stated, other publications now deal adequately with "every aspect of high fidelity," this highly professional and most interesting house organ will surely be missed. The annual "Tape Recording Directory" will be continued.

### Johnson Hunt Moves

Johnson Hunt Productions have moved from their former South Pasadena address and are now located at Film Center, La Canada, Calif. (Lah KahnYadd please).

### B-B-C Furniture Tours Museum

The school equipment line, including units housing audiovisual equipment, will be part of the national "20th Century Design: USA" touring collection to be shown at museums in eight major American cities, starting with the Albright Art Gallery, Buffalo, and including Cleveland, St. Louis, Minneapolis, San Francisco, Dallas, Portland and Dayton.

### Daylight Projection by Genarc

Pennsylvania Railroad's 125th Anniversary was commemorated in part by continuous daylight projection of slides showing some of the road's earliest pictures. The Genarc 3,000-watt projector, with its 4,000 lumen delivery to the screen, outshone even the most brilliant advertising displays in the bus station.

### Margery Weiss in Toronto

Margery Weiss announces incorporation of Educational Film Distributors Ltd., and moving of head office from Ottawa to 47 Dundonald St., Toronto.

Disney Art Exhibits

## Museums Show Disney Art

The "Art of Animation" a la Disney is being shown in art museum exhibits across the land by means of 33 silent 8mm projectors coupled with Cousino endless-loop sound tape cartridge players, plus one 16mm sound projector. Three such displays are presently touring the museums, which contract for the shows with the American Federation of Artists, with Disney footing the bill.

## People in the News

George L. Carrington, Sr., Chairman of the Board of Altec Companies, Inc., died June 19, age 57. He was a pioneer in the design of early radio and sound motion picture equipment. The construction of the first radio station in New Orleans was supervised by him, as were the first sound motion picture installations by Electrical Research Products, Inc., beginning in 1928. In 1935 he became ERPI's Assistant General Operating Manager, and in 1937, with L. W. Conrow, organized the Altec Service Corporation of New York. He was a member of SMPTE, Motion Picture Pioneers of America and Acoustical Society of America.

Philip (Bob) Kranz has been appointed Director of Educational Film Sales, Inc., in the Pathe News, Inc. program of developing and distributing a comprehensive library of educational subjects, according to an announcement by Barnett Glassman, president. Kranz has been with National Telefilm Associates and with Cornell Films, and is a former associate editor of Young America Magazine.

Walt Renner, EBF representative in downstate Illinois, has been appointed district manager for Florida.

Carl Schreyer, Bell & Howell vice-president of marketing, announces the appointment of John Trux as sales promotion manager, in charge also of product packaging and coordinating of dealer cooperative advertising programs. Trux has been assistant national advertising manager for RCA-Whirlpool Sales.

Robert T. (Bob) Kreiman has joined Argus Cameras, as sales manager — national accounts. He was with Bell & Howell for nearly 10 years, serving as audio-visual sales manager between 1955 and 1958.

Clinton H. Harris has been appointed president of Argus Cameras, a division of Sylvania Electric Products, Inc., according to an announcement by Robert E. Lewis who moved up from that post to the presidency of the parent company.

Veteran of 25 years experience in electronic service, William H. Moenter has rejoined S.O.S. Cinema Supply Corporation, in charge of the servicing of all types of theatre, kinescope and other electronic equipment.

Robert L. Withers, Sr., sales manager of Plastic Products, Inc., takes on the added title of vice-president. The firm's Luxout and Dim-out draperies are noted classroom light control media.

Paul Cox (Coast Visual Education Co.) in conjunction with John Sutherland Productions Inc., heads the new Classroom Film Distributors, Inc., with expanded resources that will continue in distribution through the Hall-Hoynes-Pacey-Morehouse sales group. Mr. John Sutherland has established a subsidiary, Sutherland Educational Films, Inc., with Mr. Raymond Denno as executive vice-president, to extend his industrial facilities into the educational production field, with two classroom films completed—**Combustion and Chlorine—A Representative Halogen.**

H. Williams Hammer has been elected president of Wilding Picture Productions, Inc., succeeding C. H. Bradfield, Jr., who becomes chairman of the board. Hammer joined the Wilding company in 1934 and served as general counsel and vice-president. Bradford became president in 1947, on the death of the founder, Norm Wilding.

Elmer B. Winter, Agricultural Extension Editor at the University of Missouri, has taken the place of Les Schlup, retired, as Director of the Information Programs Division of the U. S. Department of Agriculture's Federal Extension Service.

## 48-Lessons on Genetics

Beginning next January, McGraw Hill will place in distribution a 48-lesson series of instructional films on "Principles of Genetics." Heading the list of 15 leading authorities in the field who will present the branch of the science in which they specialize are three Nobel prize winners: Dr. Hermann J. Muller (Indiana University), Dr. George W. Beadle (California Institute of Technology), and Dr. Joshua Lederberg (Stanford). The films are being produced in the Calvin Studios, under a grant from the Ford Foundation for the Advancement of Science, made to St. Louis University and educational station KETC-TV.

## “They See What You Mean”

- Advantages of overhead projection • Principles of transparency design
- Invaluable to teachers, executives, salesmen

Here, in 88 fact-packed pages, is a complete treatise on overhead projection . . . its advantages . . . and how to use it effectively. Prepared by Ozalid's Audio Visual Department experts, it contains hundreds of tips on preparing transparencies by every known method, simply and inexpensively. Reveals secrets of successful presentation techniques. Tells how to create visual ideas. Profusely illustrated. “Must reading” for anyone who is using, or intends to use, overhead projection.

Only \$3.75 at your nearest Ozalid Audio Visual dealer (listed). If he cannot supply you, write to: Ozalid, Dept. 1-10, Johnson City, N.Y.

# PHOTOPLAY FILMSTRIPS

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. **\$7.50**

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. **\$7.50**. With guide, **\$7.80**.

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. **\$7.50**. With guide, **\$7.80**.

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. **\$7.50**. With guide, **\$7.80**.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. **\$7.50**. With guide, **\$7.80**.

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. **\$7.50**.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. **\$7.00**. With guide, **\$7.30**.

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. **\$7.50**.

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. **\$7.50**. With guide, **\$7.80**.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. **\$3.50**.

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. **\$7.50**. With guide, **\$7.80**.

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. **\$7.50**. With guide, **\$7.80**.

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. **\$7.50**. With guide, **\$7.80**.

**ARE YOUR WINDOWS AS MODERN AS YOUR METHODS?**

Audio-Visual teaching makes your coverings out of date unless...

**THEY MAKE ANY ROOM BLACK-OUT DARK IN SECONDS... EVEN AT NOON!**

**YET GIVE AN INFINITE RANGE OF LIGHT CONTROL!**

**AND COST LITTLE TO START WITH... LESS TO MAINTAIN!**

...ure, black-out coverings get the room dark. But they don't cut down on glare. Sure, conventional coverings control daylight. But they don't achieve an effective black-out. That's why both are as out of date as a one-room school! Only Flexalum Audio-Visual blinds can give you the precise light control you need for everyday class activities... and also plunge the room into absolute darkness for Audio-Visual teaching. Reasons: Flexalum is made with more slats, which means greater overlap—plus special light channels which keep light out around the sides. All this and you save, too. Because Flexalum also gives more years of service than any other type of window covering... a promise we back with a five-year written guarantee. Look into Flexalum for your school.

**AUDIO-VISUAL BLINDS**  
*Flexalum*®

Newest Flexalum exclusive: plastic-lined side-channels eliminate noisy "flutter"

## On the Screen

### Cover Scene

Ted Knight, his puppet "Suzy," Lassie and Jon Provost are shown in a Lassie segment *The Puppet*, filmed by Frenal Productions, Inc., for television. Knight also appears in Frenal's first educational film, *Let's Build a Boat*. The 16mm color film was prepared under the supervision of the Los Angeles City Board of Education and is intended for the elementary grades.

### Can You Afford AV Disasters?

Reading John Borza's story (page 533) of the disastrous flood which destroyed so many dollars worth of audiovisual equipment and materials, makes us stop and think. Think of the numerous AV libraries and equipment pools housed in out-of-the-way places — abandoned cellars, rickety outbuildings, space judged "unfit" for any other purpose. In places like these equipment and materials fall easy prey to water, fire, and more insidious dangers such as abrasive dust and grime.

How do schools justify stashing away an AV center, a function valuable both in terms of financial investment and educational services provided? How can they afford to take the chance of seeing equipment, for which they have budgeted long and hard, and sometimes irreplaceable materials go

down the drain? It is definitely time to *Get AV Out of the Cellar!*

### Videotape for School Use?

After noting the predictions on the future of videotape in educational situations (page 526), some of our readers will, we hope, come up with ideas of their own to share with others. It is very possible that audiovisualists connected with smaller schools or school systems will approach the problem from viewpoints quite different from those of the leaders we solicited and equally interesting.

### Articles to Come

In the next issues we will present subjects ranging from complex language laboratory installations to simple scale models, used to bring elementary pupils in contact with the areas they are studying. Readers will learn of one university's use of AV in the teaching of extension courses — and the efforts that went into creating an AV center in an already established school. Also waiting are the details of a Texas project in more efficient staff utilization, involving teacher teams, clerical aides, and of course audiovisuals.

The December magazine will again contain summaries by leading authorities of 1959 activities in the AV world as well as their forecasts of the future.

# HAVE YOU HEARD?

## News About People, Organizations, Events

Attending Texas Cooperative Conference were (left to right): O. L. Davis, Jr., associate secretary, Association for Supervision and Curriculum Development; Mrs. Gladys Polk, president, TASCD; Jack McKay, president, TEXAVED; Dr. Harold Wigren, etv consultant, National Education Agency; Mrs. Irene Davis, chairman, School Libraries Division, TSTA and TLA.

### Texas Instructional Materials Conference

"Secondary in importance only to the teacher in our educational process is the material she makes available to her children," Dr. Chandos Reid, assistant to the superintendent in charge of curriculum, Waterford Township Schools, Pontiac, Michigan, told curriculum supervisors, teachers, librarians and audiovisual consultants attending The University of Texas' first Cooperative Conference on Instructional Materials.

Taking as its theme, "Extending Educational Horizons Through Effective Use of Instructional Materials," the conference was an unusual one from the standpoint of involvement. In addition to the Texas Association of Supervision and Curriculum Development; the School Library Division of the Texas Library Association and the Texas State Teachers Association; and the Texas Audio-Visual Education Association, sponsoring organizations, many members of the academic faculty of the University participated in its various activities.

Classroom teachers attending the three-day meeting were assured by Dr. Harold Wigren, educational television consultant for the National Education Association that television was a "neutral medium": only the teacher could make it what it was.

Unique feature of his discussion was

a "feed-back" session in which informal groups were confronted with two questions: "What can television teaching do that no other medium can do?" and "What can television not do that a teacher or other learning tool can do?" and the results reported back to the group.

In connection with local implementation of the National Defense Education Act, Ralph P. Frazier, specialist in science equipment and materials for the U.S. Office of Education, emphasized two ideas: one, that care and planning must go into the selection of equipment and materials; and another, that teachers must be trained in the use of these things.

Utilizing an overhead projector to outline new developments in the area of science teaching, Dr. Addison Lee, director of the Science Education Center in the University's College of Education, explained that science teachers must find ways to enable individual students achieve educational goals on their own initiative without undue reliance on the teacher.

Dr. Lee also conducted a science teaching demonstration in which he employed such instructional materials as magnetic board models and time-lapse photography to illustrate a biology lecture on the chemical composition of chromosomes.

Various instructional materials, organized around an eighth grade science unit, "Properties of Air," were

used by Mrs. Nettie Shaw of Carthage to demonstrate the "cross-media" approach.

Special contribution of the Summer Institute was four group sessions on use of the language laboratory. Supervised by staff members, these groups learned how drill tapes were prepared for practice and repetition and how tape recorders and earphones were replacing the lecture method in the classroom.

The conference provided facilities for preview and evaluation of teaching materials in the areas of science, math and foreign language. Teaching displays and commercial exhibits also were featured.

In a summarizing session, the group agreed to report conference proceedings to local groups; permeate the thinking of co-workers for better utilization of materials through pre-service education; maintain contact with other professional groups; and work with community groups in utilizing materials used in the schools.

Planning the conference were members of participating organizations: Mrs. Irene Davis, Mrs. Edith Cosgrove and Mrs. Louise Van Meter, Texas Library Association; Dr. Gladys Polk, Mrs. Bertha Brandon and Miss Gladys Henninger, Texas Association of Supervision and Curriculum Development; Jack McKay and Dr. Ernest Tiemann, TEXAVED.

### People in the News

JAMES W. HULFISH, JR., is the new Director of Information for the National Audio-Visual Association. He previously served as Administrative Assistant to the Executive Vice President of the United States Wholesale Grocers' Association.

HAL F. RIEHLE has been appointed Assistant Chief, Audio-Visual Center, at the United States Air Force Air University, Maxwell Air Force Base, Alabama. He will coordinate production of instructional materials and develop and improve teaching methods involving these materials. Previously, Mr. Riehle was coordinator of audio-visual services at Northern Illinois University and assistant professor in the AV departments of the University of Florida and Florida State University.

where you need it! when you need it!

There's no need for a special room assignment, no delay, when the classroom has LEVOLOR A.V. (Audio-Visual) VENETIAN BLINDS. These blinds give complete control of ambient light to suit the subject, projector and student activity.

Today, any classroom can be converted for Audio-Visual instruction inexpensively by the installation of LEVOLOR A.V. BLINDS.

Write for Levolor's invaluable survey report "How Dark Should Classrooms Be For Audio-Visual Instruction?" No charge or obligation. Write to Audio-Visual Dept., Levolor Lorentzen, Inc., 720 Monroe St., Hoboken, N. J.

COPYRIGHT: LEVOLOR LORENTZEN, INC.

STEPHEN F. KEEGAN, former editor and publisher of *Film A-V News*, has been named special assistant to Barnett Glassman, president of Pathe News and head of the press department.

ALBERTA L. MEYER has been appointed executive secretary of the Association for Childhood Education International. She formerly served for nine years as consultant in the Division of Audio-Visual Education for the St. Louis (Missouri) public schools.

BRICE HOWARD, formerly an NBC television producer, is now manager of Michigan State University's educational TV station WMSB. The position was formerly held by Dr. Armand L. Hunter, director of broadcasting, who coordinated all university activity in television, radio and closed circuit TV broadcasting. Dr. Hunter will continue as director.

MRS. BEATRICE S. SIMMONS, Secretary of the Illinois Audio-Visual Association, is now Film Consultant in the Illinois State Library. Her previous post was with the State Superintendent of Instruction.

CURT LEHMAN, AV director of the South St. Paul schools, is the new president of the Audiovisual Coordinators Association of Minnesota.

DR. DON G. WILLIAMS, director of the Syracuse University Audio-Visual Center, was elected president of the International Liaison Center of Motion Picture and Television Schools. The Liaison Center, an associate member of the UNESCO Communications Media Center, has as its purpose the stimulation of information exchange on film production methods and film and television production training techniques.

LORAN C. TWYFORD has been appointed to the New York Division of Educational Communications as a consultant in audiovisual methods and materials and educational communications in general. Formerly he was director of the Instructional Film Research Program at Pennsylvania State University and Associate Professor of Audiovisual Education at Michigan State University.

a graduate program in 1960 for master of arts degrees; and renewal of the Briggs Family Foundation scholarship grant of \$5,000.

Other progress cited was: installation of kinescope facilities operated cooperatively with WTHS-TV, and construction of custom-designed, high-speed, motion-picture negative processing machine.

Twenty radio, television, and film courses were taught in the first semester, and 17 in the second. Students majoring in the department numbered 156.

Three Miami radio stations, WGBS, WCKR, and WQAM, broadcast 119 programs produced by the department.

Three Miami television stations, WTVJ, WCKT, and WTHS-TV, broadcast 134 programs produced by the department.

The motion picture section photographed 56,000 feet of 16 mm. film; kinescoped 13,000 feet; processed 445,000 feet of negative, printed 402,000 feet and recorded 40,000 feet of magnetic sound film and 319,000 feet of tape.

## Vancouver Festival

Twenty-five countries participated in the second annual Vancouver Festival, from August 3-15. From the 250 entries, 114 films were chosen as worthy of presentation.

An international panel of judges, comprised of James Card, film curator of Eastman House, Rochester, N. Y., George Tabori, Hungarian-born screen writer and playwright, and Osmond Borradaile, Canadian motion picture photographer and director, chose award winners on the closing night. Winners were: *Documentary* — "A Soho Story," Great Britain; *experimental* — "Two Men and a Wardrobe," Poland; *children's* — "The Story of Small and Big Kids," Japan.

## University of Miami Progress Report

High points in the year ending May 31, 1959, were: graduation of 29 students majoring in the department's subjects; completion of a \$60,000 color film series, "Survival in the Sea," for WTHS-TV and the National Educational Television and Radio Center; a contract with the U. S. Office of Education for a two-year, \$60,000 research experiment in summer TV teaching; academic approval to start

The **KEYSTONE** Standard Overhead Projector  
is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Standard (3 1/4" x 4") Lantern Slides, Polaroid Slides, and Handmade Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2 1/4" Slides, Strip Film, and Microscopic Slides.

It is useful —

**In the Science Category** with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

**In the Mathematics Category** in teaching Number Combinations tachistoscopically; Solid Geometry with Stereograms.

**In the Modern Languages Category** in teaching French and Spanish with Tachistoscopic Units.

Write for Further Information or a Demonstration by our Local Representative. KEYSTONE VIEW CO., Meadville, Pa. Since 1892, Producers of Superior Visual Aids.

# At the head of the class!

Using the projector as a blackboard.

Building up a composite image with several sheets of film.

**THE OVERHEAD PROJECTOR** keeps the teacher in front of the class, projecting his own slides, facing his class at all times, observing reactions, and adjusting his presentation to the response of his pupils.

There is no need for a separate operator, with an accompanying system of signals. The projector complements the teacher rather than replaces him. The teacher selects his own pace, extemporizing as he wishes; commenting before, during, and after projection.

He uses the screen as a blackboard, writing or drawing at will on slides or sheets of transparent plastic, without turning away from his class. Single or multiple sheets of film are easily superimposable on the slides, allowing the teacher to unmask transparencies in progressive disclosures, or to build up several components into a composite image.

Slides are large (8" x 10"), and easy to make. Rudimentary art skills produce dramatic, colorful transparencies.

If you wish to learn more about the Overhead Projector, please write to Section OP, Visucom Laboratories, Technifax Corporation, Holyoke, Massachusetts. Please indicate in the letter the nature of your interest.

## Calendar

- Sept. 28-Oct. 1 — Industrial Film and AV Exhibition, New York City.
- Oct. 5-9—Society of Motion Picture and Television Engineers, 86th semi-annual convention, Statler-Hilton Hotel, New York City.
- Oct. 13-15—Industrial AV Association, fall meeting, Princeton Inn, Princeton, N. J.
- Oct. 20-22—Technifax 16th Seminar—Workshop in Visual Communication, Holyoke, Mass.
- Oct. 23-24—Illinois Audio-Visual Association, fall meeting, Moline, Ill.
- Oct. 26-30—Society of Photographic Scientists and Engineers, annual national conference, Edgewater Beach Hotel, Chicago, Ill.
- Oct. 27-30 — National Association of Educational Broadcasters, Sheraton Cadillac Hotel, Detroit, Mich.
- Nov. 8-14 — AMERICAN EDUCATION WEEK.
- Nov. 20-21—Michigan Audio Visual Association, fall meeting, Western Michigan University, Kalamazoo, Mich.

## AV Courses to be Televised

A course in audiovisual education will be televised in test areas of the United States. The lessons, 42 in number, include audiovisual equipment, its classroom usage, and techniques of teaching with audiovisual materials. This project will be executed by Professor Wesley Meierhenry, University of Nebraska; Professor C. F. Schuller, Michigan State University; V. B. Rasmussen, Wisconsin State College, La Crosse; Lee Campion, St. Louis County Schools; Philip Lewis, Chicago Board of Education; F. A. White and W. A. Wittich, University of Wisconsin; Robert Suchy, Milwaukee Public Schools. The lessons will be kinescoped this fall and broadcast at the beginning of next year.

## American Science Film Association

The formation of an *ad hoc* committee to organize an American Science Film Association was announced today by Dr. Randall M. Whaley, Associate Dean of the School of Science, Education and the Humanities at Purdue University. The Com-

mittee, consisting of a group of scientists and film specialists, was formed in Washington early in July, in response to recommendations made at an "Interdisciplinary Meeting on Films and Television in Science Education," called by the Advisory Board on Education, National Academy of Sciences — National Research Council.

Organizing committee members are: Chairman: R. M. Whaley, Purdue University; Vice Chairman: A. B. Garrett, The Ohio State University; Vice Chairman: Carl Allendoerfer, University of Washington; Treasurer: Donald G. Williams, Syracuse University; Secretary: Robert E. Green, National Academy of Sciences — National Research Council. Other committee members are: John Flory, O. S. Knudsen, Richard H. Orr, Daniel Rochford, Edwin W. Roedder, H. Burr Roney, Robert Wagner, Willard Webb.

It is expected that formal organization of the Association will be completed in 1960.

## East Carolina College Holds AV Workshop

Sixty-six students from six states attended the second annual summer Workshop in Audiovisual Aids held recently at East Carolina College, Greenville, N. C. The Workshop was directed by Professor Marguerite Vanderclark Crenshaw of the College's Department of Library Science. Guest consultants included: Cora Paul Bomar, state supervisor of libraries; Wendell W. Smiley, librarian and technical director, Department of Radio and Television; Jane F. White, Department of Business Education; Anne Dunn Ross, AV supervisor of Durham County public schools; and W. Gordon Gibbs, business machines representatives.

Current projects in which producers of visual aids and textbook publishers are co-operating were studied extensively, and the making of a wide variety of visual materials for demonstration lessons by project committees, and a tour of the East Carolina College television and radio station added to the workshop program.

## International AV List

The World Confederation of Organizations of the Teaching Profession recently published a catalogue entitled *Audio-Visual Aids for International Understanding*. The catalogue converts into a card file system, and contain over 1200 AV materials.

Copies are available from WCOTP, 1227 6th St., N.W., Washington 6, D. C. Price, \$2.50.

**PROJECT  
YOUR  
SLIDES**

30 FEET WIDE**

**WITHOUT  
DARKENING  
ROOM**

*Old-fashioned, incandescent projectors limit you to small screens and small audiences —*

For that convention, sales conference, technical meeting, or training school present really big, brilliant, full-of-detail pictures. Project 3 1/4" x 4" and 2" x 2" slides with a

## STRONG UNIVERSAL ARC SLIDE PROJECTOR

even where darkening the room is impractical, or where it is desirable to maintain illumination for taking notes. Plugs into any 110-volt A. C. outlet. Easy to operate. Complete with blower, power transformer, arc lamphouse with motor-fed carbons, and choice of objective lens in the range of 6 1/2 to 20 inches inclusive. Available with Electric Changer which holds 70 3 1/4" x 4" slides which can be changed by remote push button control.

Used by Ford, National Cash Register, General Motors, S. S. Kresge, General Electric, Eastman Kodak, Hamm's Brewery, United Air Lines, Westinghouse Electric, Lockheed Aircraft Corp., Detroit Edison Co., Massachusetts Institute of Technology, Purdue University, advertising agencies, television stations, and many government agencies.

*Write for literature and prices. Suitable trial period can be arranged.*

A SUBSIDIARY OF GENERAL PRECISION EQUIPMENT CORPORATION

JOHN BORZA has been Chief of the Bureau of Visual Education for the Cleveland Board of Education for almost four years. Formerly, he did audio-visual work in the evening adult education division of the Cleveland Public Schools, produced training visuals for the Ford-Ferguson Tractor Company, and rejoined the Cleveland Schools as head of the production department. Mr. Borza has produced several educational sound films, and is in charge of filming the Cleveland Browns football games. He also teaches courses in audio-visual practices and film production at Western Reserve University.

★

PHILIP FAYEN is Audiovisual Director and a sixth grade teacher at Kimball School, National City, San Diego County, California. Audiovisual education was his minor during graduate work at Florida State University, and he has been responsible for the AV program in the various schools in which he has taught.

★

GILBERT HAGERTY, whose archaeological findings make up the story on page 536, is coordinator of visual aids and speech arts at Rome Free Academy, Rome, N.Y. His varied activities have included publications of articles, stories, verse and plays, radio announcing, historical research and little theater work, as well as three years with the U.S. Navy Visual Aids Department. He is also newly-appointed Director of the Ft. Stanwix museum.

★

ROBERT A. MINER is Manager, Market Planning Department, Ampex Corporation, Redwood City, Calif.

★

OLWYN O'CONNOR is an assistant in the Audio-Visual Department, Schenectady (N. Y.) public schools.

★

DEPARTMENT EDITORS are: AUDIO—Max U. Bilderssee, audio education consultant, state department of instruction; AV IN THE CHURCH FIELD—William S. Hockman, Director of Christian Education, First Presbyterian Church, Glens Falls, N. Y.; FILM EVALUATIONS—L. C. Larson and Carolyn Guss, both of the Audio-Visual Center, Indiana University, Bloomington; FILMSTRIPS—Irene F. Cypher, Associate Professor of Education, New York University.

# The Art of Listening

by Olwyn O'Connor

THE inability of our people to listen is a direct result of the electronic age we live in. Adjustment to the ever-increasing sounds about us frequently takes the form of unconsciously "tuning-out" everything that does not *immediately* grasp and hold our attention. Since listening is one of the four basic components of communication, we can ill afford to ignore the significant noises and become a nation of poor listeners.

Business and industry recognize that listening deficiencies prove costly in dollars and time and are currently including listening comprehension in their training courses. Colleges and universities are beginning to offer courses in listening.

Reading, writing and speaking have long been basic educational curriculum, but listening has, until recently, been largely ignored. Educators must recognize the potential danger and work toward developing listening skills with the young child.

Good listening does not come about through mere practice *unless* we are practicing good listening habits. If we can teach the child listening habits that develop and refine with his maturation, a significant communication problem may well be solved. The "unlearning" of poor listening habits in adult life would then be unnecessary.

Audiovisual equipment and materials are "naturals" for teaching effective listening skills. The classroom orientation prior to listening to records, viewing films, filmstrips, etc., establishes a favorable frame of reference for listening and seeing. Such materials also illustrate the inter-relationships of visual stimuli in conjunction with audio. Listening is thus demonstrated as not just hearing but as a composite awareness and interpretation of all stimuli present.

Group listening to the spoken word or music provides motivation for the individual child's attention.

The young child, by his very nature, wants to conform and make the same overt responses as his classmates.

Program repetition is recommended in the initial experiments in order for the poor listener to practice attentiveness and "hear" what he missed. Introspection, if encouraged, will provide the average child with sufficient knowledge of his individual deficiencies to demonstrate more self discipline when the next program is presented.

The use of folk music, for example, may be successfully used to demonstrate listening skills on the elementary level. The sea chantys, war songs, work songs, etc. tell a story as well as give insight into the daily lives of the people depicted. How much can we learn from the word pictures of "The Eric Canal"?

At more advanced level, classroom discussion of radio and television programs are especially profitable. Emphasis and detail are noted as well as where specific intent of program was lost or came to fruition.

The tape recorder offers obvious and unlimited possibilities for demonstrating listening skills.

Person-to-Person communication may also be illustrated via audio-visual materials. A slide is placed on the screen with one-fourth of the class viewing it while the remainder are out of the room. Each of the viewers then communicates the details of the slide to one of the second fourth, etc. The last fourth repeat aloud what they have been told by the third fourth. The chain loss in oral communication is easily and enjoyably demonstrated by having the entire class view the slide together.

If statistical research surveys are correct, the average American spends 45 percent of his waking hours listening!!! We must close this instructional gap and teach our children to listen to learn if we are to fulfill our obligation to society.

to

Fifty  
Chief  
State  
School  
Officers

We have just seen your new book, and we are disappointed in it. In fact, we just can't figure out, considering all the care and attention you gave to the preparation of this book, why you treated audiovisual materials and equipment the way you did.

We fear that local and state school authorities may be misguided about audiovisual materials and equipment in relation to the National Defense Education Act, if they follow too closely your "Purchase Guide for Programs in Science, Mathematics, Modern Foreign Languages." The trouble is that for the most part your Guide deals with AV materials and equipment quite indifferently and there are some serious omissions. Although audio equipment is an integral part of the language laboratory recommendation when it comes to the science and mathematics part of the Guide audiovisual materials are regarded as relatively unimportant and not essential.

Your Guide purports to tell school authorities "what to purchase and how to get full value for school funds expended." But let us cite just three unfortunate examples with reference to audiovisual equipment: (1) You state that it's more important to have four different kinds of globes in a general science classroom, namely Blank, Celestial, Hall Tellurian, and Terrestrial, than it is to have a still or motion picture projector! (2) You have completely ignored the existence of such an important and valuable tool as the opaque projector! Its value in science classrooms has been proved over and over again in the past fifty years. (3) You recommend standardizing on projector stands "sturdily constructed of wood" when no reputable audiovisual dealer has sold such a piece of equipment in the past decade!

As further evidence of the disappointing treatment you give to audiovisual materials, you list seventy-four columns of books that would be helpful to schools, and you don't name a single motion picture, filmstrip, lantern slide, tape recording, or phonograph record. You list nearly two hundred publishers and book dealers and you don't name a single producer of audiovisual materials or a single audiovisual dealer.

Such oversights raise a lot of questions:

What happened? Why have you treated audiovisual matters in this way?

Why did you work so closely with The Scientific Apparatus Makers Association who "supplied substantial funds to provide for the necessary special staff in the National Bureau of Standards" and not at all with the National Audio-Visual Association?

Why did you have a subcommittee of "officials and technical personnel from companies manufacturing scientific instruments and apparatus," and not consult at all with manufacturers of audiovisual equipment?

Why is it that among the one hundred thirty-three educators to whom you acknowledge "with appreciation their generous contributions" only two have any distinction or connection with the professional audiovisual field?

Why did you have the assistance of the American Association of School Librarians and the American Library Association and not that of the N.E.A. Department of Audiovisual Instruction and the Educational Film Library Association?

You can see, Sirs, that not only are we disappointed in the Purchase Guide, we are disturbed. Not only have pertinent and important groups of professional educators and educational suppliers been overlooked, but you may misguide some local and state school authorities whom you are trying to help. We hope that you will be concerned about this, and that steps can be taken immediately looking toward the publication of a supplement to or a revision of the Guide.

*Paul C. Reed*

At the new Cardinal Mooney High School, Youngstown, Ohio, selected by A.A.S.A. for its exhibit of outstanding school designs, Sister Marijane, O. P., says:

**“Modern facilities and up-to-date equipment give these boys a better picture of the tomorrow they’ll live in.”**

“In our Air-Science course, for instance, we ride with jet planes, track rockets into space, follow missiles to a target, explore the surface of the moon, look into the heart of a wind tunnel. This course is filled with similar interesting and important modern-age experiences. Yet, without the contemporary facilities this new school offers, such a course would be impractical. Without up-to-date audio-visual equipment like this Kodak Pageant movie projector, such a course would be next to impossible.”

Concern for the future of today’s youngsters must

entail similar concern for adequate teaching facilities and reliable equipment. The Kodak Pageant 16mm Sound Projector more than satisfies school standards for projectors. You’ll see its above-normal picture brilliance in only half-darkened rooms.

You never need to oil it, never need to keep oiling records. Students and teachers can operate it easily after one try.

*Your Kodak AV dealer will demonstrate anywhere and any time you say. Or write for Bulletin V3-22; no obligation, of course.*

Kodak Pageant Projector >

# VIDEOTAPE

Videotape installation (RCA)

*Videotape recording is one of the challenging new electronic materials for communication. Up until now, its use has been pretty well confined to the recording of material to be transmitted by television. Does it hold other promises for education? Is it a challenge to film?*

*The predictions, often frankly dreams, of many of the foremost leaders in the audiovisual field are here presented in symposium.*

THE Industrial Revolution occurred when it became possible to reproduce endlessly the work of a master craftsman. Moveable type, film and tape recordings have revolutionized the making of duplicate records of information. A revolution in communication has occurred when we can bring a rich, full-bodied event to the individual instead of taking him to the event. Videotape provides a unique, revolutionary, new instrument for this purpose.

Edgar Dale  
Professor of Education  
Ohio State University

I really do not see the challenge, from an educational point of view, of "videotape recording."

What does videotape offer, other than immediate playback, that is not now provided through motion picture film? I can appreciate the value of immediacy in programming news and other public information TV programs. But so far as instructional materials for school use are concerned, immediacy of playback is of secondary or even tertiary importance.

We certainly do not select textbooks solely on the basis of the recency of their printing. Neither, I believe, should we select other instructional materials on the basis of such a criterion. Whether an AV instructional presentation is on videotape or motion picture film is immaterial—just as it is immaterial whether an audio presentation is on disc or tape. We should be concerned with *what* is presented rather than

# Its Promise for Education

whether the presentation be done electronically, mechanically, or optically. Let's leave the methodology of presentation to the scientists and engineers. We have our own problems in improving educational materials.

**Seerley Reid**

Chief, Visual Education Service,  
U. S. Office of Education

**V**IDEOTAPING promises in the near future to make educational TV programs generally available at a choice of broadcast times, reducing class-scheduling difficulties in schools. This off-the-air videotaping is still beyond our grasp with regard to design and cost but is coming closer, with enormous potential impact on AV resource programs. Now, looming in the distance, we see the even more fascinating possibility of electronic photography ultimately replacing the chemical processes on which existing cameras and projectors are based. Resultant technical efficiency gains, and reductions in duplicating costs are hard to estimate potentially but too important to neglect in the very long view.

**Edward G. Bernard**

Director, Bureau of AV Instruction,  
City of New York

**M**AGNETIC tape recordings are presently serving as "memory aids" for complex electronic brains and are also being used as the control elements in the guidance of missiles and rockets. Video magnetic tape is becoming more and more in use for recording television programs for future telecasting. These, and many other interesting developments in the magnetic tape recording field, have tremendous implications for education.

Sometime in the foreseeable future there will be one basic audiovisual machine in every classroom. This one machine will replace motion picture, filmstrip, slide, opaque, overhead, and micro-projectors. It will also replace record players, tape recorders, radio and television receivers, and small public address units. This machine will be capable of doing everything all the above named devices can do including presenting materials in color.

What will it be like? I predict it will look somewhat like a combination of a television receiver and a tape recorder. The screen will be much larger than present television screens and will be flat similar to a framed picture instead of elongated like the TV picture tubes of today. Also, scanning lines will not be as apparent as they are in today's receivers. The picture qual-

ity will be far superior to either the projected or television pictures of today. There will be improved tonal and color quality.

What will these audiovisual machines do? I predict that pre-recorded video tapes, similar to present day educational films, will be available in ample quantity to meet the needs of a space age educational system and these tapes will be retained in each individual school for immediate use when needed. Filmstrips, slides, opaque pictures, and transparencies will also be available on pre-recorded tapes by use of the film-o-graph technique. Of course, these machines will receive and reproduce television and radio programs, and its tape mechanism will do everything present date tape recorders will do.

While it is predicted there will be such a machine as described above in every classroom, there will be a second machine but probably only one per school. This second machine will have the capability for recording on magnetic tape all kinds of pictures and sounds. It will be capable of recording on tape television and radio programs, motion pictures from film, filmstrip, flat pictures, transparencies, objects and models, even live action. This recorder will permit the teacher to prepare almost any type of visual and/or auditory materials for presentation to classes.

A revolution in education is overdue. In my opinion education has made possible the tremendous technological advances of today; now it is time for these technological advances to make possible an education suitable for the space age. If we do not have this educational revolution we will have the tragic consequences of education's child (our modern culture) looking after an old out-dated and senile educational system, which will not be able to produce an educated people capable of coping with the requirements of a space age. If this educational revolution does materialize, it will result in achievements far beyond our greatest dreams.

**Walter S. Bell**

Director, Audiovisual Education,  
City of Atlanta, Georgia

**C**RYSTAL-gazing in videotape in education is a precarious business, since the educational utility of this new device depends on: (1) engineering ingenuity, (2) educational changeover to electronics, and (3) educational acceptance of the electronic age.

To any one familiar with inventiveness in the exploding field of electronics, the foreseeable achievements seem almost without limits. It is easy to foresee the direct feed-in of videotape to the TV classroom receiver. This will require (a) modification of the receiver to accept signals from the tape and (b) reduction in tape cost by

several orders of magnitude. Once this is achieved, tape rather than film can become the commodity of motion pictures in education.

Picture quality on a 21" receiver will certainly not be reduced by videotape. For large screen projection, e.g., for large classroom or auditorium use, the problem of picture quality is more complicated. Available big-screen TV projectors are far from satisfactory. The problem of the large TV screen is that of the separation of the horizontal scan lines of the present TV system. TV involves optical scanning, photography does not. However, since the theory of electronics is very well developed (in contrast with that of photography), the scanning problem is easily reducible to engineering technology and the technologists are very clever fellows.

Given the technological developments, the production of tape libraries for school use, and the phased changeover from film to tape, the limits of videotape in education are largely those of limitations of the imagination, creativeness, and downright professional competence of school administrators and teachers. The handwriting on the wall is: "Get ready for the electronic age in education tool!"

**Charles F. Hoban**  
Research Professor of Education,  
Institute for Cooperative Research,  
University of Pennsylvania

**V**IDEOTAPE recording (1) makes possible rapid exchange of whole courses or special sections of courses.

(2) Makes possible more economical revision of courses.

(3) Home recorders will make possible great personal libraries of academic-cultural information. A flexible library.

(4) Special international events will be re-recorded (a la Geneva) and shown throughout the world in a matter of hours—or minutes.

(5) All uses of VTR mean easier and more rapid accessibility of information—both trivial and important—a kind of literal omnipresence of impressions generated by others than the consumer, truly a flow in which the future will swim.

**David C. Stewart**  
Assistant Director, Joint Council  
on Educational Television

**T**HE more I look at the development in the area of instructional tools, the more I am convinced that we are going to need better teachers to use these aids efficiently. It seems to me that the more choices the teacher has to make as to materials and devices, the better educated the teacher will need to be in order to make the proper choice to fit the needs of the class. With the wonderful new electronic aids being developed, we some times fail to recognize this fact.

Although the videotape recorder is still too costly and complicated to consider for immediate use in the classroom, I feel it has great potential. Think of what the creative teacher could

do with this device in the way of local production. TV programs can be easily taken off the air and used at a time when they will fit the classroom instruction. Due to its flexibility, the material not needed can be quickly edited out. Questions, visuals, comments could be inserted to make the audiovisual material fit the specific class situation. Teachers could photograph demonstrations, field trips, outstanding events, for use in the classroom. The videotape recording in the hands of a creative teacher has unlimited possibilities. In the hands of the non-imaginative teacher, it is but another tool to complicate the teaching situation.

**Arno de Bernardis**  
Assistant Superintendent,  
Portland (Ore.) Public Schools

**W**E all know how much today's tape recorder has contributed to our capacity as teachers to provide a variety of essential audio learning experiences. To any number of teachers, the tape recorder is *the* teaching tool, *par excellence*: To me it seems only logical to suppose that the videotape recorder, combining in effect the advantages of the present tape recorder with those of the motion picture camera, will similarly influence teaching. If the spread of use of the videotape recorder were also to be accompanied by a corresponding increase in the number of trained audiovisual materials specialists to work directly with teachers to adapt this and other media to educational purposes, results could be revolutionary.

**James W. Brown**  
Professor of Education  
San Jose State College

**E**LECTRONIC canning of television images and sounds on videotape presents an even greater challenge to educators than the advent of television. For the present, videotape cost is prohibitive for extensive educational use. However with experience and improvement of the art as it is applied to business, industry and professional needs its cost will be reduced to a fraction of its present level. When this occurs, educators will have an instrument which will provide the flexibility needed to apply the medium of television to the whole gamut of education. Perhaps videotape will simply be another item in the kit of tools we already have. However, since it is apparent that most schools are going to be equipped with television receivers, I wonder whether the TV screen via videotape may not become most often used device for presenting visual images in the classrooms. As such we may find the celluloid film and the motion picture as we know them today obsolete. Film libraries will then become tape libraries and other revolutionary changes in audiovisual education will follow.

**Francis W. Noel**  
Int'l Cooperation Administration,  
AV Education Advisor to Gov. of India,  
National Institute of AV Education,  
New Delhi, India

**T**HE forward march of progress in communication media is increasingly becoming a race with our ability to make intelligent use of them in education. Videotape is one example of this. At a period when educators, generally, are still a bit hesitant about employing motion pictures and TV as integral rather than peripheral tools of instruction, we have the prospect of an instrument which can readily and accurately record any audiovisual impression from anywhere and play it back, when desired, at the push of a button.

But one thing seems certain—that teacher education and teaching methods must adjust much more rapidly in the future than they have in the past or the primary responsibility for educating our society will pass from the schools and colleges as we know them into the hands of other, and probably less desirable, agencies.

**Charles F. Schuller**  
Professor of Education and  
Director, AV Center, Michigan  
State University

**I**N the future videotape recording will be an everyday tool, indispensable in many teaching situations. For example, teacher trainees and students of public speaking can see and hear themselves immediately. Surgical operations, videotaped in color, can be re-run to emphasize techniques for students and practicing surgeons. Closed-circuit and broadcast ETV instruction can be taped for later use to avoid schedule conflicts. Busy administrators can record instructions with visual demonstrations for viewing by teachers and staff at times convenient to all. In other words, VTR will be taken for granted and used as much as imagination will permit.

**C. M. Braum**  
Engineer, Joint Council on  
Educational Television

**I**T seems reasonable to predict that videotape will ultimately replace film for use in what we now know as 16mm motion picture projectors. Of course this change will require a radical redesign of equipment, but the outcomes will be dramatic and the advantages considerable. The electronic approach provides a virtually unlimited source of illumination for actual daylight projection in any classroom situation. Central tape depositories will replace film libraries for school systems and districts, and will receive newly released productions via special channel radio broadcasts or transmissions on coaxial cable to enable such subscribers to quickly record the latest items. Once the master tape is made any number of high-speed "dups" can be produced as needed to fill all requests from schools on the exact date desired. In this way, storage of multiple prints and their attendant obsolescence are eliminated. Splicing-in repair footage also becomes a thing of the past, and inspection is necessary only to remove worn pieces of tape since a new recording is made for each order. In this way, almost the original quality

of the production is maintained, since progressive deterioration peculiar to film is substantially reduced with tape.

Limitations of space do not permit really delving into this fascinating subject. The following items still should be covered:

- (1) Centralize records on videotape.
- (2) Magnetic tape materials for use in still cameras with electronic translators for immediate reproductions.
- (3) Maps, charts and graphs recorded on 3x5 sheets of mounted magnetic tape. In use these would be inserted in a slot-like device for reproductions in full color and 3D on the flat classroom viewing screen.

**Philip Lewis**  
Director, Bureau of Instruction  
Materials, Chicago Board of Education

**T**HE introduction of videotape recording in the field of communication parallels the coming of the jet engine into the field of transportation. Just as the jet engine has introduced a new concept in transportation, so videotape recording will challenge each of us to study and analyze the impact which it will bring in the field of communication. Within the next decade or two, we can anticipate many modifications which will make it possible for videotape to replace film in the transmission of ideas. Only as we grasp the significance and importance of this technological development will we be able to modify our attitudes to accept this medium of communication in our educational activities. Videotape will find its proper place in the constellation of communication's media and will partially or entirely replace our traditional method of communicating by motion picture film.

**Ernest Tiemann**  
Director, Visual Instruction Bureau,  
The University of Texas

**T**HE videotape recorder is potentially the most promising educational tool for the analysis and improvement of tasks heretofore considered "hopelessly" complex. By this means the learner can perform his task and can, immediately *afterwards*, see and gauge the direction and magnitude of his errors. In other words, the recorder provides the most necessary ingredient in motivated learning—"immediate feedback."

**Henry A. Bern**  
Head, Research Dept., AV Center,  
Indiana University

**T**HE future of videotape in non-TV applications lends itself very well to "dreaming," as long as one is in a position to ignore two rather important aspects: cost, both initial and upkeep; and the technical skills needed to operate and maintain the equipment.

Any dreams relating videotape recording to

wide usage in any but the wealthiest schools must be predicated upon an impending breakthrough in technical developments which will remove videotape recording from its present costly shackles. Unless videotape is something other than a plastic strip with a magnetic coating, it seems unlikely that costs will be reduced appreciably.

But the new techniques will come; we only lack foresight as to the date. Our dreams should include a challenge to the inventors and designers to hasten the technological progress which will lead to a new, less costly method of ultra-wide-range recording. I believe that the inclusion of this reservation will lend credence to these forecasts and will lead the uniformed not to expect too much from the industry.

**Merlyn C. Herrick**  
Lecturer in Education and  
Production Supervisor, Indiana University

**I.** Videotape will bring picture language much closer to the written word in terms of immediacy and availability. One of the impediments to picture communication is the great time and effort it takes. In the future—letters may be interpersonal face-to-face exchanges, minutes of meetings may be re-enactments of all the subtleties of human interplay, hearing a language will involve much seeing as well as hearing of the learner's performance.

**II.** Feedback will be greatly enriched by pictures, with perhaps some startling effects. (a) Many of the human inconsistencies and much of the ignorance due to mismatches between verbal labels and the real world will be removed. The correcting and compensating effects of pictorial feedback would be much more readily available and would occur much more frequently if videotape were widely used. (b) What will happen when the human image becomes as familiar to its owner as his handwriting? Will the sight of his own behavior in many situations make him introvert or extrovert, conformer or reformer, follower or leader, well adjusted or maladjusted? Can the student in screening the tape for the previous day take a more detached and dispassionate view of a school situation that was highly charged at the time?

**III.** In the school situation many uses could be made of videotape. The following presuppose two things: that classroom activities would be fully documented at frequent intervals each year, and these records be so catalogued as to make any unit readily available. (a) Pictorial report cards would provide parents with unique insights into Johnny's behavior. These should probably be screened by parents and teachers together—and perhaps in part with Johnny. (b) Teachers could much more rationally evaluate pupil growth by comparing earlier with later taped performances. (c) Thorough case studies of problem children could be made by retracing the sequence of events through their years in school. Equally important studies could be made of successful children. (d) Teacher training could come out of the ethereal world of books about children and curriculum and learning. Student teachers would already have "been in" many classroom situations, "experienced" in-

dividual differences among students, "participated" in discipline problems, etc., via tape before doing it themselves.

If all this should come true, two dramatically opposite outcomes are possible. Tapes could become a benevolent instrument conducive to fuller understanding, respect and support for the teacher. Or they could become a vicious instrument of partisan control of the teacher.

**Malcolm Lee Fleming**  
Instructor in Education and Supervisor  
of Motion Pictures, Indiana University

**O**n an evening early in May, Ralph E. Lovell, a member of my seminar at UCLA, was describing for us a new system of editing videotape, developed by himself and others at the NBC studios in Burbank.

A few short months ago videotape was still in the experimental stage. Today it is much in use in television, because it reproduces visual and auditory images with high fidelity and can be edited with precision.

Will videotape and education join hands? Of course they will. But when, where, and under what circumstances none of us can predict. In our feeling of high esteem for the handiwork of the electronics engineers, we must not forget that to a child perceiving an image on the screen, the technique of putting the image before him is not as important as is the image itself. We still need to know much more about how children learn.

**F. Dean McClusky**  
Professor of Education,  
University of California, Los Angeles

***Some responding experts predicted no real educational future for videotape. Here are their comments***

**I**N view of my complete ignorance in regard to videotape recordings, I am afraid that what I might have to say would perhaps be as enlightening as what glass makers have to say about "Visual Aids." In view of this, for me to attempt to jot down any thoughts that I might have on this subject would be at a disservice to the readers of our magazine.

---

I really don't know enough about videotape to make any pronouncement. I am hoping to learn more about it and will look forward to seeing what other people have to say in your symposium.

---

I'm sorry, but I don't think I should participate in your symposium on videotape recording. The reason is that I don't like to take a negative viewpoint, but I have very little faith in the future of videotape recording for educational purposes. I know it will find some sort of a place, but I can't feel that it will be really used, as our present audiovisual media are.

# The Videotape Recorder

by Robert A. Miner

Reprinted with permission from the *Journal of the National Association of Educational Broadcasters*, May, 1959.

**I**N April, 1956, a new and unexpected invention called a videotape recorder suddenly captured headlines on newspaper front pages, throughout the nation. The influential New York Times, in its front-page article, forecast that "electronic photography" would have implications far beyond the television service for which it had been invented. The excitement in the broadcast industry trade press was nothing less than tumultuous. What, exactly, then, was this new invention — the videotape recorder — which had created such a stir?

In its simplest terms, the videotape recorder is a device which records on a strip of magnetic tape the electrical signals which emerge from a television camera system, very much as the familiar audio tape recorder records on a narrow strip of magnetic tape the electrical signal which emerges from a microphone system. All the things which audio tape recording did for sound, the videotape recorder is capable of doing for television; the machine will record both picture and sound, as it is being picked up in the studio, and immediately replay both picture and sound, without a trace of visible deterioration. Like an audio tape, a television tape recording can be erased, and a new recording placed on the same tape, over and over, as desired. Like an audio recorder, the videotape recorder is push-button operated, and capable of full picture and sound fidelity in the hands of a relatively inexperienced operator. (Maintenance on the videotape recorder, like maintenance on all television equipment, naturally requires the services of a trained expert.) Like an audio tape, a television tape recording can be recorded on one machine and played back on another, or copies of the original tape can be made and played back on many other machines.

Physically, the videotape recorder, as it is manufactured today, consists of a handsome console, a little bigger than a kitchen range, on which the tape is loaded and threaded, and on which are located the meters, dials, and push-buttons with which it is operated, and two cabinets of a size and type found throughout radio and television broadcasting, which contain the electronics chassis that are used to amplify, modulate, and otherwise process the television signals.

In use, the videotape recorder is a convenient high fidelity recorder and reproducer of television sound and pictures, and may accurately be regarded as the television counterpart of the professional high-fidelity sound tape recorder. It is not, of course, a sort of electrical counterpart of a moving-picture camera. Just as the recording of sound requires one or more micro-

phones, artistically placed for best pick-up, videotape recording requires one or more television cameras, artistically placed for best picture pick-up, and, of course, one or more microphones to pick up the sound which accompanies the picture. Just as good sound recordings are "monitored" by experts during the recording session, television tape recordings are monitored by skilled television directors and technicians, to insure good picture recording. The physical equipment required to make a television tape recording is exactly the same as that required to produce a good television broadcast — television camera, television cameraman, studio monitor, and skilled studio monitoring technicians — the difference being that the electrical signal which contains the picture information is fed through cables to the videotape recorder, instead of being fed to a television transmitter. The videotape recorder "remembers" every detail which is fed to it, and will replay, in electrical form, the information it has received through cables, over and over, as desired.

Videotape recording, thus, is a wholly new way of storing moving pictorial information, a memory for the television camera, which does not depend upon chemicals, which is capable of immediate replay, and whose medium can be erased and re-used many times over. In many ways, it is a supplement to motion picture photography, and in other ways, most of them in television, it is a replacement for photography. New functions, which never before could be performed, are now within reach through videotape recording; some functions which photography has handled in the past can now be handled more conveniently and efficiently through videotape recording; and, of course, just as television has not replaced motion pictures, many services, such as theater motion pictures, are unaffected by videotape recording.

The principal application of videotape recording to date has been in the field of commercial television. Most of the performance abilities of this recorder which led to its acceptance by commercial television also lead to applications in the educational television field. Some of these applications have been grouped together and outlined below.

I. Many applications are related to the pre-recording of TV lessons. Such pre-recording applications include the following:

(a) A pre-recorded backlog of TV lessons in each course can be developed for use when the TV teacher is unable to be present for reasons such as schedule conflicts, etc.

(b) The schedules of outside talent will not necessarily coincide with the most desirable time for TV presentation to students. Such schedule

conflicts can be eliminated through pre-recording of programs.

(c) TV lessons will frequently benefit students in another TV area outside of that covered by the originating TV system. Pre-recording of lessons will enable such programs to be viewed outside of the range of a specific TV system without incurring microwave interconnection costs. This is made possible through interchange of tapes from one TV system with a videotape recorder to another.

(d) Pre-recording of TV lessons reduces the inherent pressure of live presentations without losing the impact of live quality.

(e) Pre-recorded TV lessons can be potentially better teaching tools than live presentations inasmuch as they allow a teacher to review her presentation and set the pace of her lesson to meet the requirements of her students. Those portions of a lesson that either drag or move too rapidly can be corrected in advance of playback to the student viewing audience so that the TV instruction can be as nearly perfect as possible.

II. Under different circumstances, it is more advisable to record a lesson simultaneously with its presentation to the student viewing audience. Such applications are as follows:

(a) A series of lesson sequences recorded on the videotape recorder can be built up for loan to other educational institutions.

(b) Many times the scheduled presentation of a TV lesson will not coincide with the most desirable viewing time for all classrooms within a particular TV system. Under these circumstances, it is much easier to record the initial presentation and repeat the lesson at a later time through playback of the recording, rather than a repeat live performance.

III. Recorded lessons, whether they are acquired through pre-recording or simultaneous recording, can either be stored for future use or the tape can be erased and be used for another lesson. In those instances where lessons are stored for future use, additional recorder applications become feasible. The TV lesson series stored on tape can be repeated the next semester or the next year, as the case may be, through playback of recorded tapes, rather than repeating the live TV instruction.

(a) The required up-dating of material in stored TV lessons from one use to another can be accomplished very easily with magnetic tape. This is done either by erasing and re-recording those segments of the total year's teaching that are to be up-dated, or by splicing in new tape sections to replace that portion being up-dated.

(b) The up-dating of subjects from one year to another will not require as much time as the preparation and presentation of the original lesson required. Teaching time of the instructor making the original presentation has therefore been made available for other assignments, such as the teaching of another level of the same subject or a related subject, yet the impact on students viewing the tape playback is identical to the original live presentation.

(c) Area repositories can be established for TV lesson recordings, enabling an evolution to start by using the best teachers in an area to teach a particular subject. Such recordings can

then be used by schools in the area according to their own schedule requirements.

IV. A permanent school documentary materials library of recorded tapes can be established for inserting into live lesson presentations to enhance the educational value of the program.

(a) Significant public events can be recorded on the videotape recorder for retention in this library. Visiting specialists can be recorded. Rare physical, social, economic and similar phenomena and events can also be recorded. Field background information for history, science, industry, etc., can conveniently be recorded for this library on tape.

(b) Laboratory experiments can be recorded under the best possible conditions and at considerable expense when necessary, by large sponsoring organizations. Time, effort and money involved will be justified by the great numbers of students who will be able to view the experiment through many subsequent playbacks of this lesson.

V. The videotape recorder also is a valuable tool for scholastic training and self-improvement of TV teachers. Applications in this category are:

(a) TV lessons can be recorded for post evaluation and study by groups of TV teachers and their classroom counterparts.

(b) TV lessons can be recorded in advance and used as a basis for self-correction, both for the teacher and other members of the production staff, through observing a playback of their lesson in the classroom and noting the effect on students and classroom teachers.

(c) Recorded lessons can be played back for analysis by the teacher and director to eliminate those portions that drag or require strengthening from an educational point of view.

(d) Experimental lessons can be recorded on tape in selected subjects at various grade levels for exchange with other TV teaching projects for purposes of evaluating the content, lesson structure, teaching techniques, etc.

(e) The videotape recorder will also serve as a valuable rehearsal tool to assist TV teachers and the production staff to acquire confidence and the best possible lesson presentation.

VI. There are other applications of the videotape recorder aside from the direct lesson applications outlined above. These include the development of a library containing typical video teaching tapes in a variety of subject areas and grade levels for demonstration uses with:

- (a) Parent groups.
- (b) Visiting educators.
- (c) Service clubs.
- (d) Sessions at professional educational meetings.
- (e) Teacher-trainees (in-service, teacher colleges, new teachers in county).
- (f) Boards of education.
- (g) Pre-recording of PTA programs.
- (h) Evening adult education subjects.

The foregoing certainly does not represent the total list of applications for videotape recording in the field of educational television. It is meant only as a stimulus to examining the possibilities of this new electronic tool to determine its correct role in assisting educationally or economically any particular teaching endeavor.

flooded area as seen from the Bureau of Visual Education looking across East Blvd.

by John Borza

## Get AV Out of the Cellar!

**F**OUR months ago, a disastrous flood invaded the Bureau of Visual Education of the Cleveland Public Schools. A three-hour rain ruined approximately half a million dollars worth of audiovisual equipment and supplies, to say nothing of the damage done to the building, furniture, supplies and other installations.

The building housing the Bureau, formerly the School of Education of Western Reserve University, was more than adequate to carry on the following operations:

(1) On the second floor was the sound motion picture production studio and complete photographic processing, graphic arts and special audiovisual equipment maintenance;

(2) On the first floor were two screening rooms, conference rooms and general and administrative offices;

(3) In the basement major operations were carried on. Here were facilities for housing and storing all equipment and materials used for circulation in our schools: 5,756 motion picture prints; 14,852 filmstrips; over 300,000  $3\frac{1}{4} \times 4$  slides; 5,069 2x2 slides; 1,580 study prints; 575 exhibits; 247 pieces of sheet music; 66 sound motion picture projectors; 37 silent motion picture projectors; 109 combination 2x2 and filmstrip projectors; 13 opaque projectors; 15 tape recorders; 8 sound filmstrip projectors; 11 various types of automatic audiovisual equipment; 73 screens in sizes from 50x50 to 8x10 ft.; 61 various pieces of audiovisual and photographic equipment.

Doan Creek, which runs through the University Circle park system, was at one time open. While the creek was still open, the undeveloped acres of the highlands absorbed most of the rain water. Even after the creek went underground the culvert was large enough to carry away the excess rainfall. However, within the last five years the suburbs in the highlands have expanded at a tremendous rate. Insufficient sewage development was first felt three summers ago when, after a heavy rain, the culvert

could hold no more water and the storm sewers backed up.

At that time, the gymnasium at the Bureau held about 1500 pieces of audiovisual equipment recently serviced and ready for the September opening of schools. The five summer servicemen had their job to do over, but they were able to salvage all this equipment because it was not completely submerged.

Preventive measures were taken by installing sewer back-up traps and a sump pump. These preventive installations were effective and apparently took care of ordinary conditions.

However, on June 1 of this year for a period of three hours, four inches of rain fell on the higher grounds over an area of 8.6 square miles. Because the ground could not absorb this unusually heavy rainfall and because of inadequate sewage facilities, the water followed the only course left—down the roads and hillsides and into the University Circle area at the rate of 2,860 cu.ft. per second.

The back-up sewer traps held the water from coming into the building, but the water rose above the basement window sills. The pressure became so great that it burst the windows and doors and demolished two interior walls.

During the height of the flood, the water in the Bureau of Visual Education building measured 17 feet. The waters receded during the night and the next morning we were greeted by a sea of mud surrounding the building. Slides, exhibits and filmstrips were picked up for blocks in the surrounding neighborhood.

Realizing that the water-soaked equipment was a total loss, our immediate problem was to salvage as much material as possible. Fortunately there is a 16mm film processing plant in Cleveland. All the motion picture films were rushed to Labcraft for cleaning. With the purchase of an outdoor swimming pool it was possible to keep the films under water until they could be put through the continuous-processing machine. By keeping the films wet the silt from

Water rising above basement window sills.

Pressure bursts windows and doors: demolishes two interior walls.

Materials were often found blocks away.

Swimming pool preserved wet films until they could be processed.

the flood waters could not dry and impregnate the emulsion.

Temporary quarters for film inspection were immediately set up at the Bureau of Visual Education, where film inspectors checked all salvaged films and spooled them onto new reels and placed them in new cans. This measure was necessary because rust had already set in on the old ones. Salvaging of colored film continued for eight days before the emulsion deteriorated. Black and white film lasted for ten days. A total of 3,674 prints were caught in the flood and our loss was 1,314 prints. We salvaged a total of 1,097,162 feet of film at a cost of one cent per foot.

The filmstrip salvage operation was similar. Many hands were needed to do the work as soon as possible. Sixteen students were hired from a nearby high school. They worked four hours every day after school. Photo-developing trays were filled with water and a wetting agent. The filmstrips were swished through the trays and then squeegeed and hung up to dry. The next job was to identify and label the salvaged filmstrips and put them into new plastic containers. The students handled 10,830 filmstrips, and of this number 90 percent were recovered. However, 2,754 filmstrips were never found again after the waters receded.

The loss of the models and exhibits, made by the W.P.A., cannot be measured in money. The real value was in the popularity of this material with elementary children.

Nor can a dollar and cents value be placed on the  $3\frac{1}{4} \times 4$  and  $2 \times 2$  slides. If it were possible

to replace all the lost slides, the raw materials needed would cost more than \$306,000. The replacement cost of the filmstrips is about \$19,500. The replacement cost of motion picture films is about \$78,000. The replacement cost of the audiovisual equipment is about \$59,000. Maintenance parts and equipment have been replaced at a cost of about \$15,000.

Just before the disastrous flood struck we were preparing for our summer equipment maintenance work. Repair parts for this job had already been received and they were completely inundated. Thousands of dollars worth of equipment parts were saved by soaking them in penetrating oil. The audiovisual equipment that was caught in the flood waters was a total loss and is now waiting to be cannibalized for usable parts. In the meantime, temporary quarters were set up in order to carry on maintenance work.

Plans are now being made to house all of the Bureau of Visual Education operations above the basement level. The Cleveland Board of Education does not carry insurance so that the replacement of all lost materials and equipment is being made from the Replacement Fund.

We in Cleveland hope that other school systems will benefit from our sad experience. There is no time like the present to take a second look at the housing of your audiovisual equipment and teaching materials. If they are stored in a basement, as it seems in too many cases, what are the probabilities that they too could be caught by the waters from a flash flood?

# Students Bring History to Light

by Gilbert Hagerty

**G**ILBERT Hagerty started this work because he is deeply interested in archeology. By a combination of historical and geographical reasoning he believed that there had to be an overnight stopping place for travelers along the natural waterways connecting the developing West with the established Hudson Valley. Where else but along the Great Oneida Carry, where water travel was interrupted for a portage? In this area Mr. Hagerty dug.

Soon his students joined him at the digging. In the recently completed state-wide Essay Contest for students and teachers, conducted by the New York State Commission on Historic Observances in connection with the 350th anniversary of the explorations of Hudson and Champlain, Mr. Hagerty submitted the following summary of his class activity.

Because this is exceptional, inspired teaching, the editors of *EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE* bring this story to you as a superb example of the use of the field trip in instruction—a field trip which resulted in discovering the site of a colonial pioneer's home.

By virtue of the location of the digging it can be assumed that the colonial owner was directly connected with water transportation in the days of the bateaux—preceding the construction of the Erie Canal. By virtue of the artifacts already unearthed—clay pipes, a wide variety of pottery, glassware and the stems of glasses, as well as pewter, iron and silverware, it can be assumed that this indeed was the site of an Inn of the earliest days of the American Republic . . . probably the Inn at which DeWitt Clinton stayed when he first dreamed of a continuous waterway connecting east and west.

Mr. Hagerty was a winner in the contest—and spent two weeks in The Netherlands as a representative of the New York State Commission on Historic Observances investigating and verifying his discoveries. But this is not all—the new Fort Stanwix Museum in Rome, New York, was opened on August first of

this year. It is an immediate and direct outgrowth of Mr. Hagerty's work—and he has been named Director. Sic Semper audiovisualists!

—Max U. Bildersee

**F**or 170 years a fascinating story has been hidden in our community—hidden so well that no hint of its presence was discovered until the fall of 1958. Then it was by sheer chance that we, with the help of student groups, were able to save it from complete oblivion.

This story was written in hallowed ground which was literally being carried away for fill because the owner did not know what he was destroying, and no one had hitherto recognized its importance. But because of our action this destruction has been stopped, and cooperation of the owner has made careful archaeological investigation possible. We now have most of this story, complicated as it is, as it was recorded in the earth between the years of 1789 and 1805.

Because of its geographic location on the Great Oneida Carry, with its associations of colonial troop movements, fur trade and Indians, this site is of tremendous significance not only locally, but in the development of the waterway system from the western frontier to the sea. It was the focal point for the thousands who crossed from the Mohawk to Wood Creek and the West.

Because nothing in addition to the standard county histories has been recorded about this area for many years and scarcely any new information gained from primary research, we intuitively felt that this location should reveal something of importance. We were not wrong.

Briefly, our project is an archaeological one involving discovery and original research in

Students George Gibson and Lynn Hagerty studying a piece of crockery found in a well and a stratification shown indicating occupation levels.

Oneida County history. Preliminary investigations on a strategic plot of ground, ripped and torn by a bulldozer, showed evidences of an 18th century pioneer dwelling. This evidence places the occupation at a time when there were but seven or eight dwellings of whites between Whitestown and Oswego, and most of them were primitive huts. This we have from the report of a reliable eyewitness who was through the territory at that time. This spot we are investigating was the site of one of these dwellings, erected soon after the Revolution.

When the site was first discovered, we gathered every bit of material from the exposed surface. Since the ground was disturbed generally about a foot down from the surface and since there were three components in this general area, we were faced with the problem of classification. We filled wax milk cartons with this material and labeled them "general surface finds." We soon learned to distinguish the difference between the type of artifact we found on one end of the site from those found on the other end where there were two other occupations. In the fringe areas the materials, of course, were mixed. Fortunately there were still about fourteen inches of undisturbed soil to be examined in many areas where the bulldozer had just scuffed off the surface.

These areas of undisturbed soil were carefully examined, stratigraphy plotted, photographed, and the artifacts kept separate. Each area was coded and the artifacts labeled with the code mark. This gave us a core of information that we felt was valid in forming preliminary conclusions. The stratigraphy clearly showed that this ground had never been plowed or in any way disturbed before the bulldozing began.

Among the more interesting items found in the undisturbed stratification were many brass

and pewter buttons of varying sizes, both plain and with ornamentation; quantities of koalin pipe bowls and stems with a profusion of identifications as makers' marks and bowl designs; shards of household dishes with the characteristic 18th century blue figures on cream background, some of which we were able to reconstruct in part; several silver and brass coins ranging from the reign of George II through 1796, of British, Spanish, and American origin; iron axes, one a British military broad axe; ironware as crane hooks, hinges, hand forged nails, ox shoes, horse shoes, fragments of iron kettles, knives, bone handled forks with two tines; pewter spoons; glassware with pontil marks; personal ornaments; lead musket balls, gun flints; even a brass bung from a barrel, an exact duplicate of one found at Crown Point; and parts of many other items common to a pioneer household.

Of a more general nature we were able to determine the location of the building, once the long concealed well was found. There was no foundation to the house, only a dirt floor. A concentration of brick rubble and charred boards gave us the location of the hearth. Associated with charred boards were many short pointed sticks, the remains of burned saplings, aligned in a row, a foot under the ground and over the rotted and charred boards—dramatic evidence of the conflagration that brought them crashing in flames to the ground to be covered by smouldering debris. Here we have a suggestion of how the dwelling was constructed. Fragments of broken window glass and hand forged nails added to our information.

Animal bones scattered through the general debris gave an indication of the diet. Deer bones were prominent as were bones and teeth of other large wild and domestic animals. Salt water clam and oyster shells were abundant

Sifting previously disturbed areas for artifacts—left to right, Jim Butler, Bob Osgood, Ronnie Hart.

and in direct association with known 18th century materials. One wonders how these shellfish could be fit to eat after arriving here in the wilderness after the long trek from their nearest point of origin, New York City. One of our students found a reference showing that the Dutch as early as 1690 were pickling oysters in New York and sending them in casks to the Barbados in a thriving trade.

By correlating our information through scientific methods, we were stimulated to do further research in documentary sources. Gradually scraps of documentary evidence grew until we had a body of information to check with our archaeological findings. The documentary evidence and the archaeological evidence fitted beyond the point of coincidence. The cold statistical facts and the book passages lived.

The two remaining occupations suggesting the 19th century were identified by examining old maps. The maps told us that there were two inns at these points—one prior to 1850 and the other prior to 1876. One of our group found a reference in a letter by Dewitt Clinton stating that he had a fine dinner at an inn in this immediate area in 1810. The description of its location fits our site. The whole area has now been mapped and each component identified.

When enough samples of all this material had been gathered, some students who had taken part in the various expeditions were given a choice of the areas they wished to investigate further. For instance, one chose to make a study of the coins which had been found; another sorted out all the various samples of dish fragments to determine the variety of dishes, the number of kinds of dishes, and to make a frequency distribution of the occurrence of design types in order to determine the most common type of dish used. Comparisons were then made with dishes of known dates. The crinkle edge type with blue or green slip on cream seemed to predominate. We found that this type of dish appeared frequently on British camp sites of the Revolutionary period in the New York City area; and while not abundant, they also appear at Crown Point on Lake Champlain. Crown Point was not occupied after the Revolution. Further study showed us that a goodly proportion of other dish types that were found also fall into the Revolutionary period.

We have first hand information from two other local sites with Indian associations that yield these same types of wares. This information

will help us to place a time span on these sites in future investigations.

Another student chose to make a study of the glassware fragments, which appeared in a wide variety and most of which show the pontil-mark which is characteristic of 18th century hand blown glass. Another chose to study the buttons on the basis of type, design, construction, and time span. It is interesting to note here that we have one cast pewter military button of a Revolutionary soldier, with U S A on its face; the S intertwines with the U and A. By and large they all fall into the 18th century period.

The iron work interested another student, the kaolin pipes, another. Comparison of the knives and two-tined forks and the pewter ware with known 18th century types that have been found in debris of Revolutionary sites and which are to be found in museums offered a challenge. For our information on the kaolin pipes we are indebted to Mr. H. G. Omwake, an authority on the subject. The range of bowl ornamentation, stem bore, and makers' marks are all significant in determining their age span. Of 31 more or less complete bowls we have 21 with a 5/64" stem bore. The 5/64" stem bore was popular in English pipes from 1750 to 1800. The 4/64" bore was popular from 1800 on. We have 10 of these bowls. Again this strong statistical evidence points to the 18th century. One curious bowl has many Masonic emblems on it.

A student who was involved in nearly every group field trip and who had taken many of her own, set out to make some interpretations of her own. They were checked against the documentary evidence.

Not only have the scientific aspects of this project been intriguing, but the creative aspect of the work is shown by a short story by one of our group, based on the suggestions stimulated by our finds.

The archaeological evidence tells only part of the story. Many blank spots are filled in with documentary facts, but we examined details closely and consulted many sources. Our first clue came from a reference that stated very briefly that a Mr. X came to this area in 1789 and was one of the very first after the Revolution to take up residence at a point we can easily recognize today by the topographical features given. They match our site. This same Mr. X was listed as the head of a family in 1790 in this area when the first U. S. census was taken.

**EVALUATION STUDIES  
ON NEXT PAGE** ▶

available for only one year, the Chemistry course on Film with John F. Baxter, has already met with enthusiastic teacher response in classrooms throughout the United States. Teachers say that it is more than meeting the expectations of Dr. John C. Bailar, Jr.,

President, The American Chemical Society: "...it is our hope that this course on film will make it possible for the high school instructor to offer a kind of instruction in chemistry which can dramatically improve the teaching of this increasingly important subject!"

# "THE GREATER GAIN!"

## Major Evaluation Studies Show Tangible Benefits of Complete Courses on Film...

The objective findings of the major studies are proving the merits of the Complete Courses on Film. In approaching the studies, it is important to keep these basic facts (researched by National Academy of Sciences) in mind: 50 per cent of what we know in chemistry has been discovered or developed in the past 30 years. And . . . 90 per cent of what we know in physical science has been learned since 1940. How much modern physics and chemistry teaching essential to *Space-Age Education* is reaching the classroom? The bearing of this information is further amplified by a committee member for the *Fund for the Advancement of Education*, in writing about the results of the Chicago Study in Physics: "While these standard achievement tests (used in determining results) are based on typical high school courses in physics, the content taught in the film course is considerably greater, the inference being that students taught with film learn more physics though this is not always reflected in standard achievement tests."

The full-year courses on film are, therefore, answering the vital need for concentrated learning of greater amounts of scientific information . . . in a shorter time . . . by more students.

### The Major Studies and Projects:

#### Pilot Study—Science Research Associates— Introductory Physics on Film

Evaluation study—July, 1958—in 49 high schools—1,161 students. Films were projected in the classroom.

*"The results of the overall analysis showed a statistically significant difference between the gain-scores of those taught by the film method and those taught by the traditional method. Those taught by the film method had the greater gain."*

#### The Chicago Study—Introductory Physics on Film

Group tested: 117 Chicago Public High School students completing two full semesters of Physics on film. Films were shown via TV. Test instrument: Dunning Physics Test (Form BM). National percentile norms established by tests in 19 states, 77 high schools, 2,181 students.

Average scale score: Chicago group, 124. National percentile rank: 78.

*Comment by Chicago Committee: "The average IQ of our group was 116, while that of the whole group participating (national norm group) was 114. Hardly a sufficient difference to explain the very gratifying achievement of our group of 117 students . . ."*

#### American Institute of Physics—

#### A Study of the Teaching of Physics by Film and Television

Evaluation program carried out during 1957-58. Conclusions are based upon personal observation by advisory committee members, by interview, by teacher-administered standardized achievement tests, and by teacher and student questionnaires.

*While no statistically significant difference has been found . . . in the acquisition of facts of physics, there is a statistically significant difference in the ability to apply scientific principles to new situations in favor of the film group.*

#### The Wisconsin Physics Film Evaluation Project

Conducted at University of Wisconsin, 1957-58, under grant from the Fund for the Advancement of Education. Participating: Sixty non-metropolitan high schools in Wisconsin—1,332 students. The Films were projected in the classroom.

*Film-taught students were compared with control students on special tests containing the additional material found in the films. Results: significantly in favor of film-taught groups.*

#### Fund for the Advancement of Education— Rocky Mountain Project—Aspen, Colorado

June, 1959—Although directed toward exploring the benefits to small schools with special regard to adequate curriculum coverage, the project findings are applicable in principle to schools and systems of any size.

*Report from Colorado Teacher-of-the-Year: At close of year, achievement testing (in Chemistry) revealed that classes using films placed eleven percentile points higher than classes taught the previous year without the films . . . further, that the classes of the previous year had a higher average IQ.*

**Brain-storming Session**—Science teachers discuss aspects of filmed courses. Some questions: How much math needed? Teacher preparation before showing? Concepts? This and other illustrations here taken at Rocky Mountain Project—June, 1959.

**Teaching demonstrations**—Teacher demonstrates how film can be stopped to make comments, answer questions, then continued. Classroom teacher is free to handle special learning situations, check understanding.

**Ervin L. Cline, Arriba (Colorado) High School,** makes evaluation of effectiveness of Student's and Instructor's Manuals.

**Teacher Committee** examines suggested test questions furnished in Teacher's Manuals.

For addresses of where to write for copies of the published studies or complete summaries of them, contact . . .

# Criteria For

## AV Equipment

*The second and concluding article by Mr. Fayen, intended to provide those in charge of buying school audiovisual equipment with a detailed, down-to-earth set of selection standards. (See page 476 of the September issue)*

*by Philip Fayen*

### 16MM PROJECTORS

- a. Are the arms sufficiently long to accommodate a 1600-foot reel?
- b. Does it have a reverse switch?
- c. Does it have a sound-silent switch so both silent and sound films, which run at different speeds, can be used?
- d. Have you decided whether special features are needed or desirable, such as variable speed or permanent lubrication?
- e. Does it have a clutch? (A clutch on an ordinary projector is not needed in most cases. It will give a dull picture if completely stopped on a single frame and will burn the film if only slowed down because the fire wall has not been entirely lowered. If stopping or slow motion is needed, for football or baseball training films for instance, there are special purpose projectors which fit the bill perfectly and whose prices are fairly reasonable. Anyway, you can request the factory to remove the clutch control.)
- f. Does the intensity of illumination, as determined by a light meter reading, show it meets the minimum recommended? (If the projector has a 2" focal length lens which is focused on a 45 x 60"

beaded screen 27 feet away, then there should be a screen brightness of 10 foot-lamberts, or reflected light. This is measured by holding the light meter close to the screen to catch only reflected light—not in the projector's path—in a darkened auditorium having one-tenth foot candle reading before testing projector, as recommended by the Society of Motion Picture and Television Engineers.)

g. If you have no light meter, does the projector have a rating of 750-1000 watts? (If the screen brightness is insufficient, the tonal quality of the picture is reduced; if the picture is too bright, it causes optical fatigue and a seemingly washed-out picture.)

### SLIDE AND FILMSTRIP PROJECTORS

- a. Are the two functions of the projector easily interchangeable, with no tools needed?
- b. When set up as a slide projector, will it accept an automatic slide changer?
- c. When testing filmstrip function, does there appear to be any damage, such as film streaks, scratches, or torn perforations, after having turned a full filmstrip

through?

d. Are there 10 foot-lamberts registered on the light meter using a 3" focal length lens focused on a 60" x 45" beaded screen which is 17 feet away?

e. If you have no light meter, does the projector have a power rating of 350-500 watts?

### OPAQUE PROJECTORS

- a. Will it accommodate material up to 10" square?
- b. Does the temperature of the projected material desirably cease to rise in from two to five minutes? (Tape a mercury thermometer to heavy black paper the size of the projected area and have its mercury reading upward so it can be read on the screen. Another and less severe test is to use gray paper using the thermometer for the same reason; gray paper will absorb less heat than black paper so the reading should be lower and less harsh.)
- c. Is the fan of the down-draft type and not updraft so that light pieces of material will not be blown away?
- d. Does the projector have a power rating of approximately 1000 watts?

e. Is there a control, easily accessible, for an arrow indicator which should project on to the screen?

## OVERHEAD PROJECTORS

a. Does it have a power rating of 500-1000 watts?

b. Is there a small head on the projector so as not to block the view?

c. Is a minimum of keystone present?

## RECORD PLAYERS

a. Does the machine for classroom use have speeds of 78 and 45 r.p.m. (not as satisfactory as other speeds), 16-2/3 r.p.m. (for small records containing children's stories), and 33-1/3 r.p.m.?

b. Is it equipped with at least the ceramic type of cartridge, the costly but preferable variable reluctance type, or is it the crystal cartridge which is especially bad in regions of high humidity? (The variable reluctance costs about three times that of the ceramic but gives more than that in length of life and quality of performance.)

c. Does the tone arm (or needle arm) weight not exceed 6-8 grams for best reproduction and to avoid record wear?

d. If it is desired that the record player be equipped with a record changer, does the changer preferably feed by gripping the side or edges of the record? (Avoid those types which have the steadying arm overhead and the catch grabbing part of the center hole with the entire weight of the records on top. These catches will wear out and in short order wear away the record hole.)

e. Is the motor a "four-pole" motor for much smoother operation, or is it the less expensive but not as smooth "two-pole" type?

f. Do you find the speaker in a separate enclosure for best reproduction and can the speaker be shut off and earphones be plugged in for individual listening and so as not to disturb others?

g. Does the amplifier have a 10 to 15 watt power rating? (This will give fine performance at moderate cost.)

## TAPE RECORDERS

a. Are there at least the two speed operations of 3 3/4" (for making longer classroom recordings) and 7 1/2" per second? (The latter

speed is also for playing commercially recorded tapes in addition to classroom recording.)

b. Will the recorder accommodate 7" reels?

c. Does it have a tape footage counting device?

d. Will it transcribe from another recorder or record player with good fidelity?

e. Does the amplifier have a power rating of 10 watts, or at least 7 watts as absolute minimum for good performance?

f. With no tape inserted, does the amplifier have not more than 2 decibels of sound distortion when volume is turned up half-way?

g. Is this a four-track tape recorder, or is it two-track. (The latter costs less but allows only half as much recording.)

h. Do you have negligible "wows" and "flutters"? (These are variations in the regular speed of the tape and in the smoothness of the reproduced sound which can be readily heard with the ear if they are great. They are more common with the "two-pole" than with "four-pole" motors.)

i. Are you aware that carbon microphones are unsatisfactory for quality reproduction?

j. Is the microphone of the dynamic type if the climate is humid, or are you able to protect a crystal microphone from dampness when it is not in use?

k. Is the microphone's reception characteristic of the desired type? (Unidirectional, one direction for interviews, selected speaking; Bidirectional, two directions for limited conversations; Non-directional for all directions.)

## CRITERIA FOR PROJECTION STANDS AND CARTS

1. Is the stand 27" high and has it a top surface of at least 18" x 24" and light in weight for portability?

2. Are the uprights or legs straight and flush with the top or are they bent outwardly? (The latter style is supposedly shaped for greater stability, but creates a tripping obstacle which cancels out the stability advantage.)

3. Does it have four casters with two having locking brakes, or does it have only two wheels and two legs which necessitates lifting the cart whenever moving it is desired?

4. Are the casters equipped with rubber, or plastic, wheels of 3" or larger diameter, or are they metal and small? (Rubber and plastic will roll quietly in contrast to a

metal wheel which creates artificial thunder, and a generous-size wheel will pass over thresholds and small obstacles more easily?)

5. Does it have a metal shelf which is about mid-way down for storing or holding needed items?

6. Does the stand or cart have provision or facility for carrying a projection screen?

7. Is there a cart for each projector?

## OUTLINE OF SCREEN TYPES AND CRITERIA FOR SELECTION

There are two practical manufactured types: the wall-mounted models and the tripod-mounted projection screens, the latter being more commonly used. Also, there are four basic types of screen surfaces: 1) glass beaded, 2) matte, 3) metallic or aluminized, and 4) lenticular.

Glass beaded screens appear to have great brightness or reflection qualities within a narrow viewing angle, but the beaded surface introduces some roughness or graininess, and the brightness decreases rapidly as the viewer leaves the center line of projection.

Matte screens appear to have overall low brightness, but have uniform reflection over their entire surface and brightness does not depend upon the viewing angle. (Brightness may be increased with a brighter projector.)

Metallic or aluminized screens provide greater brightness than the first two if the viewer is sitting on or very close to the line of projection. The brightness falls off quickly when leaving this line and moving to the side and the picture has a slight graininess. It is especially suitable for use with stereo slide projectors and for color. (Neither the beaded nor matte screens are suitable for stereo projection.)

Lenticular type surface is the latest innovation on the market and appears to live up to claiming all the advantages and none of the disadvantages of the others. This screen has fine horizontal ribs to diffuse the light to a 100 degree viewing angle and to intensify the reflection. One manufacturer now has on market a screen with vertical as well as horizontal ribs which further increase reflection, even at greater vertical angles of projection (i.e., Radian Optiglow). This type would appear to have the greatest potential.

## CRITERIA FOR SCREENS

1. If it will be used for showing motion pictures, are you looking at 4 x 5" and 5 x 7" sizes which are the minimum areas you should consider?

2. If it will be used for opaque, filmstrip and slide projectors, are you considering square screens with 40 x 40" as the minimum size?

3. Does the screen suit the shape of the average room in which it will be used? (Long, narrow rooms usually need the beaded type; short, wide rooms can use the matte type to advantage; long rooms where color will be used or stereo use will be common should try to purchase an aluminized screen; soon for all room shapes, the lenticular type will probably be used.)

4. Can the screen surface be cleaned and is it mildew resistant?

## PURCHASING CRITERIA

1. Have you "shopped around" for the most reasonable price in this particular model? (Vendors will usually be more patronizing if you let them know that you are looking for the "best" price.)

2. Is the vendor willing to deliver the equipment and test its full performance and operations with all of the foregoing criteria in mind with you present to see him to it?

3. Has he checked to make sure that all accessories, such as spare projector and pilot lamps, spare reels, line cords, lens lint brush, etc., are present and in functioning order?

4. Has the vendor signed a guarantee which provides at least for a 90 day period during which servicing will be free for at least those defects which were not present at time of delivery testing?

5. Is the vendor willing to sign a written agreement that there will be no charge for furnishing loan equipment while school equipment undergoes repairs, if the equipment develops malfunctions within the guarantee period and the repairs needed fall under the printed terms of the guarantee?

Without enumerating them, it would be a truly great and wonderful thing if the best features of each type of equipment were to be combined into one or more makes. The increasing competition of educational television may force the manufacturers to redesign some of their products to make their use as pleasant and uncomplicated an experience as one would expect when

one considers their costs.

As it is, certain undesirable features in certain equipment or special features for special uses found only in certain apparatus must often be the deciding factor, and not quality of construction with economy of cost as it should be.

## First from PHILCO®...

## New All-Transistor TV Camera for Schools at only \$1445

Here's the camera that makes educational TV practical—dependable and trouble free . . . at a saving of hundreds of dollars.

A lightweight, maintenance-free, foolproof camera that anyone can operate. No matter how large the audience . . . now, everyone can participate in lectures, demonstrations, classroom sessions. Compare the quality of this newest Philco

TV camera with any other. To improve the quality of your audio-visual program . . . at dramatic savings . . . insist upon Philco TV.

Place your order now to assure early delivery. Write for Philco TV Planning Book, *Government & Industrial Division, 4702 Wissabickon Ave., Philadelphia 44, Pennsylvania. In Canada: Philco Corporation of Canada Limited, Don Mills, Ontario.*

# PHILCO

QUALITY FIRST!

# AUDIO

by Max U. Bildersee

We've been asked a great many questions about audio materials this summer—but the most frequent inquiry has been "Where can I buy this record?" And the "this" record can be any particular recording because at AUDIO FAIRS in Illinois and Indiana we had the pleasure of giving a great many interested listeners a chance to hear a variety of recordings.

The answer is not simple. To begin with, certain records, particularly those published by book publishers and designed to accompany particular texts, usually are available only through those companies, or their recording affiliates. Thus for records published by D. C. Heath, Ginn and Company, Appleton-Century-Crofts, Harcourt Brace and the Oxford Press, look to their salesman for their recordings.

Sales representatives from the American Book Company carry exclusively and sell discs produced under the AUDIO EDUCATION label.

Then there are the specialty records which are available only from the publisher. These include Encyclopaedia Britannica, McGraw-Hill (Popular Science label), Lexington, Columbia University, Newberry Award and Music Education Record Corporation. These must be secured from the publisher or, in the case of some you recognize, from their staff representatives.

Finally, the largest producers (the most important sources for such materials including Columbia, Decca, Folkways, RCA Victor and a host of others) present the simplest solution, for their product is available through local record dealers. For particular titles you may have to wait on a "special order" from the publisher but the records should be available to you through local sources.

Price? The record market is flexible. We cannot suggest that you "haggle" over price, but schools, libraries and other such institutional purchasers

should be able to secure a sizable discount from local dealers. Then, too, by submitting a tax exemption voucher to any source, schools should be able to secure a still lower price.

Finally—if the record you seek seems irrevocably lost or impossible to obtain through any channels—let us know and we will try to help you. We cannot always promise success—but we will try. Not too many weeks ago a college in Chicago sought information about recordings which were published in 1939 and which were last listed in a catalog about three years ago. We don't know that we found the particular discs sought, but we could recommend another title (and to our mind, superior) of very similar material. We may be able to do this much for you, too, and we shall be happy to try.

## Audio Fairs

With the coming of October and fair time in many parts of the country, it is appropriate to describe, at least in part, an "any time of the year" fair which you can undertake and sponsor yourself. And the AUDIO FAIR can add to the prestige of your audio-visual program, contribute markedly to your in-service training activities and serve as both springboard and announcement for expanded availability and use of audio materials.

All you need is some imagination to promote the fair—and a considerable stack of a variety of recordings.

We experimented with this device in a number of nearby school communities and teacher-training institutions before we reached the conclusion that the AUDIO FAIR required the participation—and the listening activity—of the individuals attending the showing.

The past summer at several mid-western teacher training institutions we tried it this way with some success we think. To begin with, we secured a great variety of printed materials . . . leaflets, flyers, catalogs, still pictures, indexes and so forth which we could give away. These were shipped to the point of the showing and placed on tables for anyone to pick up.

Then from our own collection of recordings we shipped a great variety of materials, representative of the work of a variety of producers. These too went to the point of the demonstration—and these too were placed on the table where they could be seen, handled and studied.

The selection of recordings sent was as broad as we could make it; broad in grade range, for it included records for pre-school children and readings

**NORMAN SINGER**, *Dean of the ASPEN SCHOOL OF MUSIC and Director of the ASPEN MUSIC FESTIVAL in Colorado*, uses his NORELCO 'Continental' to play a tape by a young pianist who has applied for admission to the celebrated summer school. "The NORELCO 'Continental' is our choice because the prime requisites for a tape recorder at Aspen are ruggedness, versatility and high fidelity," states MR. SINGER. "A first-rate tape recorder like the 'Continental' is an essential item for an active music school. By studying the tapes, students learn to criticize constructively their own compositions as well as their own instrumental and vocal performances." The NORELCO 'Continental' is a product of North American Philips Co., Inc., High Fidelity Products Division, Dept. 1S10, 230 Duffey Ave., Hicksville, L. I., New York.

in Greek for the college student; broad in subject matter, dealing with practically every area of the curriculum including music appreciation, the sciences, the arts and languages. Finally, the collection was broad in quality, for we included many of the fine recordings available, and a few somewhat less valuable from an instructional standpoint.

Finally, a catalog of the collection was available for study by those who attended the Fair.

The AUDIO FAIR started formally, with a short presentation describing the materials at hand, discussing the importance of teaching students to listen intelligently—stressing the constant application of audio comprehension in everyman's everyday training and living. Next there was a short description of the multitude of materials available to the audience to see, hear and appraise. And finally, the members of the audience were invited to try them out for themselves.

In each case, the host institution provided a variety of sound reproducers for the use that the groups might give them. We did *not* try to guide the listening to any particular group of records or producers, but rather urged that our guests browse.

It was simple for many to study the catalog, select a recording which seemed to fit a particular need or interest, find it on the tables of recordings and then sit and listen to all or a portion of the record.

We estimate that, in a few days of intensive showing of recordings, we saw and spoke with approximately a thousand people, and to many we introduced a new line of thought concerning specific types of materials and their applications to instruction and learning.

You can do the same thing for your teachers and for students in the teacher training instructions you serve. We will be happy to help you organize a local AUDIO FAIR for your own people by mail, and help you too to secure printed materials. What you must supply are the imagination, the promotion and the variety of materials for your participants to see, to handle and to hear.

**MANY VOICES**—A notable contribution to the audiovisual instructional field is a series of six separate recordings under this generic title. The recordings are intended, progressively, for use from the seventh to the twelfth grades in the study of English and are designed particularly to accompany the text series, "Adventures for Readers I and II," "Adventures in Reading," "Adventures in Appreciation," "Ad-

ventures in American Literature" and "Adventures in English Literature." The books and the records are published by Harcourt, Brace and Company (750 Third Avenue, New York) and are meant to be used on a parallel basis to excite both the visual and the auditory senses. A list of the titles in the six recordings would be too space consuming, so suffice it to say that the range of literary presentation covers all forms—poetry, drama, essay and

short story. Similarly, a complete list of authors would read as a "Who's Who" in literature but the range is from Chaucer to Churchill, from Shakespeare to Shaw and from the simplest presentation to the most complex.

The artists who perform are worthy, too, of mention. Actors and authors combine to give breadth, depth and life to the lines that are read. The entire series, without exception, is wor-

**— A WORLD OF SOUND ON FILE —**

thy of the consideration of every library and of every audiovisual director whose services involve the variety of tastes represented.

The recording "CHEMISTRY" (Audio Educational Aids, Box 250, Butler, Missouri) is designed for the student who has had considerable experience in the study of this science, and is seeking a quick, "overnight," review of the more common chemical elements including the name, spelling, symbol, atomic number, atomic weight and chemical valence; a list of the more important terms used in chemistry including the word, spelling and definition; and, a compilation of some atomic terms with the definition and, a compilation of some atomic terms with the definition of each. This reading or recital of information is unin-

terrupted from beginning to end.

The data presented is fundamental, and should be found in any modern secondary school chemistry textbook. Because, as already stated, the recording is meaningless to the student with no previous knowledge, the utilization is limited to refresher purposes.

Some junior high school students will profit from "THE PATRIOT PLAN" (Folkways Records FH 5710; 117 West 46th Street, New York 36) but senior high school students will find this a good background and documentary source for classes in American History. This recording, in addition to being used in direct classroom instruction, will be a worthy addition to a variety of libraries for both reserved listening and loan purposes.

"The Patriot Plan" involves the documents of the struggle for democracy in the western hemisphere. Included in the recordings and the accompanying seventy-two page book are "The Mayflower Compact," excerpts from "A Body of Liberties," "Roger Williams' Letter to the People of Providence" "Maryland Toleration Act (excerpts)," "James Otis on The Rights of British Colonists Asserted and Proved (excerpts)," "Sons of Liberty Speech" of Colonel Isaac Barre, "The Virginia Resolves," dramatized excerpts from "Patrick Henry's Testimony Before the House of Commons" and a variety of other materials involving such well known names as Samuel Adams, John Winthrop, John Locke, Andrew Hamilton; involving such milestones as the Zenger Trial, Witchcraft Trials and Town Meetings, and such issues as slavery, freedom of conscience, and of course, taxation.

This is more than a recording—it is a student's document which is at

once a reference source, a document information source and a useful instructional material. Junior and senior high school students are probably the youngest who can profit greatly from hearing these recordings, but surely teachers and college students can use the material in a variety of ways.

Have you heard "PERRI," which is one of the better Disneyland (2400 W. Alameda Avenue, Burbank, California) productions insofar as school applications are concerned? Second and third grade youngsters can enjoy this simple, yet effective story of the adventures and misadventures of two squirrels, Perri and Porro. They are beset by a variety of difficulties, including attacks from their natural enemies in the woodlands, the cold of winter and the frightening dangers of a forest fire. Jimmie Dodd narrates this delightful recording which, besides being used obviously for pleasure listening, can contribute to some aspects of the nature study program.

Mature students can profit from hearing the reading of five short stories by W. Somerset Maugham (Libraphone; P O Box 215, Long Branch, New Jersey). The stories included are "Red," "The Ant and the Grasshopper," "Footprints in the Jungle," "The Letter," and "Episode." These examples of the story-telling art of one of the leading short story writers of this generation can be used effectively for a variety of purposes in upper high school and college classes in literature, the short story and writing.

Similarly interesting, and designed to appeal to a similar group of students, is Columbia ML 4754 titled "JOHN COLLIER" in which the noted author reads his own "Mary," "De Mortuis," and "Back for Christmas." Although this is fundamentally a library recording it may be used effectively in high school and college English classes to demonstrate writing techniques, diction and the art of reader (and listener) involvement. This recording from The Columbia Literary Series indicates that the author can give both life and meaning to the reading aloud of his own works, and thereby lend a personal touch to the listener's enjoyment.

Finally, teachers of Greek can now find an unusual and useful example recorded of Greek speech. Moses Hadas, noted scholar of languages, reads portions of the "Apology" in both Greek and English in the recording "ON THE DEATH OF SOCRATES" (Folkways FL 9979; 117 West 46th Street, New York 36.)

According to Dr. Hadas, it is in the "Apology" that Socrates delineates his own concept of his own function on earth, his mission to sting men to think, to examine their ideas and concepts, to question the finality of their conclusions. Portions of the "Phaedo" are included in the recording including Socrates' conversations with his friends on the last day of his life.

The recording, which is accompanied by a complete Greek and English script, can be useful to mature high school students studying Greek, to college students and to adults working in the language areas involved as well as in philosophy and Greek history.

**ENRICHMENT MATERIALS** (246 Fifth Avenue, New York 1, N. Y.) has released several new titles, including **THE MONROE DOCTRINE**, which is backed up by **F. D. ROOSEVELT'S FOUR FREEDOMS SPEECH**.

The former is actually a summary of the events, conferences and decisions which led to the pronouncement by President James Monroe of the simple, yet decisive foreign policy statement which bears his name. The recording reports, accurately, that the statement is far better known today than it was when it was spoken. In fact, according to most historians, the far-reaching, vital policy statement was largely ignored in its original presentation as merely another facet of an annual "State of the Union" message to the Congress.

The recording includes an important teaching device — a point-by-point summary of the Monroe Doctrine. This very good delineation and presentation of this keystone statement of our foreign policy can be used in classes — sixth grade or junior high school preferably, not only to point up a particular period in history but also to encourage discussion of our current policies and the relations existing throughout the Western world today. The Monroe Doctrine is a "live issue" in world affairs and this recording can be used to emphasize this.

**F. D. ROOSEVELT'S FOUR FREEDOMS SPEECH** is a quick, perhaps too quick, summary of the events of the two decades between the first and second World Wars. Although we, as teachers, knew much of this period, the students we reach in the upper elementary grades and the junior high school — and thereby the students for whom this recording is intended — know of this period only through hearsay, reading and reports. They can have no memory of it.

**LANGUAGES BECOME ALIVE IMMEDIATELY!**

WITH **Ekotape**<sup>®</sup>

**RECORDERS**

Automation in foreign language study! New tape teaching method stimulates enthusiasm and response in students, makes teachers' efforts more rewarding. In modern language training centers, students take individual lessons from master tapes, record their own "lessons." Personal attention isn't lost — teachers are in voice contact with *all* students.

Ekotape recorders are specified for many new language training centers for these important reasons . . . exceptional dependability with no "down time," simple controls for easier operation, instant stop-start action, and unexcelled fidelity. In addition, Ekotape recorders and amplifiers are priced well within the reach of most school budgets.

Accelerating your language training program? Your Ekotape dealer can help you develop your own tape teaching center. Call him today or write direct.

# FILMSTRIPS

by Irene F. Cypher

We saw a good many people, young and old, this past summer, and one thing impressed us about all of them. Whenever anyone had a good story to tell or an interesting anecdote to relate, they could be assured of an audience and willing eyes and ears. Now, should you not get the point of our statement immediately, this is exactly how we feel about filmstrip productions. It does not worry us in the least that there may be several sets dealing with the same subject matter — for each producer has probably put in something to make his particular set a bit different from another. We are not worried about saying this either, for if teachers are wise in making selections of materials, they will realize this and begin to use several sets in order to bring these different aspects of the story to the attention of their pupils. Once again we risk the dangers of repetition to remind you that library shelves are filled with books dealing with the same subject (and no one condemns this fact); in fact people rejoice over the fact that there are differing viewpoints put into print for us all to read, compare and discuss. So start the new term with a look at the filmstrip catalogs, and don't be afraid to mark down for preview and consideration for use all the material you can secure on a subject. Your pupils might like to hear two sides of a story — and remember it better because of having seen two presentations.

## Television Series

(color, 3 strips; Vis-ta Films, P.O. Box 2406, Sepulveda, Cal.; \$10.50 per set, \$1 single strip). A new producer and a new set, which is good to include here. Television is probably the most discussed and least understood medium of modern communication. Inasmuch as it is here to stay and is certainly a part of everyday life on this sphere, it would seem wise to make some attempt to learn to appreciate what it is, what it brings into our lives and how it operates. In this series the producers give us an excellent idea of what constitutes *THE TELEVISION STATION AND ITS SERVICES, EQUIPMENT AND SETS FOR LIVE TELEVISION AND PREPARATION OF THE LIVE TELEVISION SHOW*. The whole aim

of the series is to help us understand just what it takes to produce a live television show and how this show "gets on the air." We can imagine any modern child being intrigued by this series and we can also see the value of this material for students in production courses. The story is plainly outlined, the various devices such as transmitters, sets and props are described and the planning process involved is well outlined. Material such as this is timely, interesting and related to modern life. We personally found the series both appealing and practical. It is good to see such material made available and to recommend it for use wherever television is considered and discussed.

## Atlantic Region Series

(3 strips, color; produced by National Film Board of Canada and available from Stanley Bowmar Co., Valhalla, N.Y.; \$5 per strip). Much of Canada's agricultural and shipping wealth is concentrated in the provinces of the Atlantic Region. This series introduces us to the general history, terrain and resources of that area and then gives a very complete pictorial description of the shipping industry and of forest and farm life. It is interesting to note the combination of activities and the extent to which the work of the area contributes to life in the Western hemisphere. The factual information is well presented and the pictorial story is good. Many important geographical facts are included and the series is excellent for any study or consideration of Canada. Manuals supply additional data and are excellent resource material.

## Heat, Light and Sound

(color, 7 strips; produced by Handy Org., 2821 E. Grand Blvd., Detroit 11, Michigan; \$31.50 per set, \$5.75 single strip). To understand the world in which we live it is essential to know something of the nature of heat, light and sound. They are part of everything and affect everyone. In this series we consider *Cause and Nature of Heat; How Heat Causes Expansion; How Heat Travels, Light and How It Travels; Light and Color; Cause and Nature of Sound; How Sound Travels*. The subject matter of

the series is directly related to things we see and hear all around us, and it will be very interesting to carry out the simple experiments suggested. The presentation is practical, directly correlated to the needs and interests of young scientists in the upper elementary and junior high school science classes. Probably the practicality of the series is what will appeal to both teachers and pupils and which makes it a good set to recommend.

## Life in Elizabethan Times

(4 strips, color, produced by Popular Science and available from McGraw-Hill Films, 330 West 42 St., New York 36, N.Y.; \$22.50 per set, \$6 single strip). The Elizabethan period and the people who lived and worked then are of ever continuing interest, particularly to students of literature and the theatre. Here the producers highlight the life of William Shakespeare and the theatre during the reign of Queen Elizabeth. We see the London of Shakespeare, and the people who were instrumental in making this a period to be remembered. Both theatre and players are presented for our study; leading characters are shown, and the nature of the plays described. This is an excellent series for literature classes and social studies.

## Pennsylvania Geography Filmstrips

(7 strips, color; available from Visual Aids Service, P. O. Box 470, S.T.C., Westchester, Penn.; \$27.50 per set, quantity discount on orders of 10 or more). It is important that the geography and history of each of our states be visualized for study. This producer has undertaken to make available such local sets, and the Pennsylvania set certainly provides a wealth of information about that state. He gives us facts about buried treasure (sub-soil resources), forests, lowlands, farmlands and manufacturing cities. There is local value in the material and it will also be of equal value whenever individual state resources are considered. Other state sets are in process of preparation.

## The Story of the Panama Canal

(color, single strip and record; produced by HR Productions, 17 East 45 St., New York 17, N.Y.; \$11 per unit of filmstrip and record). It seems to us that almost anyone would enjoy this story of the Panama Canal, because it is so well presented. Of course if you are a stamp collector you will get extra enjoyment, for the story is presented through the medium of postage

stamps (in each instance the stamp is one produced to commemorate persons and events connected with the building of the canal). The voice of the narrator is good, and the record actually adds to the value of the filmstrip, making a unit which is both pleasing to see and hear and valuable for informational purposes. Material of this type can be used in a variety of situations, and has a rich potential for classroom work. It is not stereotyped, and should appeal to pupils. We can see it as useful for social studies, for literature and art, for world geography and for stamp collectors. It can be used with many ages.

## You and Your Driving

(color, 6 strips; produced by Stanbow Productions, Inc., Vallhalla, New York; \$28.50 per set). To the teacher and pupils of a driver education course this series will be of great help. Visualizations are planned to illustrate what to look for in learning to drive; rules of the road to be observed; how to interpret signs; driver responsibility. There are directed questions designed to make the driver-learner think about what he is doing at the wheel. Cartoon technique has been employed and there is simple directness to the visuals. This is another practical, useful set.

# Exciting "TRUE BOOK" FILM STRIPS NATURAL and PHYSICAL SCIENCES

- Here's the exciting new curricular tool adapted from Childrens Press' famous TRUE BOOKS (more than 2,000,000 copies now in print).
- Eligible for use under Title III, National Defense Act.
- Spark group discussion, curiosity and enjoyment!
- Develop new interest in your science and reading program!
- Promote quicker understanding of Study Units!

These 12 film strips — 35 mm., with 30-35 frames each — all in full color, with brilliant illustrations, big type, and few words, are adapted from Childrens Press' TRUE BOOKS.

Set #1 — True Book Film Strips of Natural Sciences

# AV IN THE CHURCH FIELD

by William S. Hockman

## Important Experiment

(One of the most important A-V books we have seen recently is Rae Bragman's "A Year's Program of Audio-Visual Units and Projects." In its 226 pages some 23 AV projects are described as they were carried through in a religious school. Many audio and visual media were utilized, and the grade gamut was from Kindergarten through Ninth.

When Dr. Samuel Grand, Director of the Department of Experimental Education and Audio Visual Aids of the Union of American Hebrew Congregations (UAHC), 838 Fifth Ave., New York 21, came to write the Introduction for this significant volume he

set forth a philosophy and a point of view which is needed desperately in the church field today. For this reason we are pleased to be able to present it to our readers herewith, with his permission. Let it encourage you to secure from UAHC this important report. The price is \$3.00.)

Audiovisual instruction in the Jewish religious school began in earnest in 1949 with the production of the first series of holiday filmstrips. Since then a host of filmstrips, records, flannelgraph materials and motion pictures have appeared to assist the teacher in all subjects of the curriculum of the religious school. Fortunately, the wide acceptance of these instructional tools has insured a continuous program of production by several public Jewish organizations and by a few private companies.

As important, perhaps more important, than the production of top-flight audiovisual materials, is the high-grade utilization of these teaching tools in the classroom of our religious schools. Actually, it is this phase of the audiovisual program that requires the attention of our educational leadership as well as of the rank and file of our teaching personnel.

With this consideration in mind we selected one school for experimentation in the utilization of the various audiovisual media and techniques. It was to be an experiment in depth, for we wished to have teachers in classes all the way from the kindergarten through the 12th grade develop units and projects of an audiovisual character. We proceeded on the premise that it was an educational fallacy to designate one or two teachers as the audiovisual experts in a school, just as it is unsound to establish one classroom as the audiovisual room. All teachers, we felt, should be adept at audiovisual techniques, and every classroom should be used for their presentations.

For such a pilot experiment we chose the religious school of Temple Israel in New Rochelle, New York, whose principal, Rae Bragman, has pioneered in audiovisual instruction for many years. In carrying through the experiment Mrs. Bragman has received the encouragement of Rabbi Jacob K. Shankman and the cooperation of the teachers in the religious school.

The experiment has succeeded beyond all expectations. This manual

represents its results in a most graphic manner. Appropriately the projects are represented by pictures (at the end of each chapter), which show the pupils in the audiovisual activity which was best suited to the subject under consideration. Each teacher describes his or her class unit from its inception to the culminating activity which was presented in the "Festival of Projects."

What emerges in these descriptions is infinitely more than an accumulation of audiovisual know-how. It is rather a compendium of excellent pedagogic suggestions for all subjects of the curriculum and for all age levels in the religious school. This is convincing proof that audiovisual techniques are not "a thing apart" but are closely intertwined in the fabric of good educational methodology.

We present this collection of audiovisual projects to the public in the hope that its suggestions will be helpful to teachers in all parts of the country. We are interested, to be sure, in the production of audiovisual aids of superior educational and technical excellence; we are far more concerned with the teacher in the classroom and his effective use of these and other pedagogic aids. In the last analysis, the teacher is the foundation of our entire educational structure.

## Padre On Horseback

When the Colonies were but insecure bridgeheads of Europe's civilization on the East Coast, Father Eusebio Kino came up from Mexico City into the wilds of (now) Arizona and New Mexico to plant both Christian missions and civilization. Avalon Daggett Productions (441 N. Orange Drive, Los Angeles 36, Calif.) in a 12-minute color film summarizes Padre Kino's labors in fine narration and excellent photography. In this film we see the fruits of this wise and dedicated man's life. The work of this pioneer has become one of the foundations of the culture and life of the Great Southwest. Instructive and attractive, this film is recommended for use with the fourth grade and up in church, school, synagogue, and parish hall.

## Mixed Marriages

The leaders of Junior and Senior High young people in club and church activities need not look any longer for a fine and realistic film on the problems

tested

which mixed (faith) marriages set before couples. *One Love—Conflicting Faith* documents the love and first year of marriage of a fine young couple, one a Protestant and the other a Roman Catholic. The subject is treated with fairness and objectivity. The acting is excellent, and the emotional impact is powerful. Highly recommended. Available from TRAF-CO 1523 McGavock St., Nashville 3, Tenn., and from local film rental libraries. Color, \$8.00; B&W, \$5.00.

## Film Notes

*I'll Sing, Not Cry*, is a beautiful film which documents the spirit and soul of the African. It was a hard film to make, and Berkeley Studios, of the United Church of Canada, and Anson Moorhouse, old-hand at documentaries, the genius behind this film, deserve great credit for a superb job. This film makes you say: such fine people need a religion finer than fear and superstition, and, by the grace of God, we will do our part to get it to them! Highly useful in church; in family nights; in Sunday evening services; in colleges; and in the service clubs of the community. In 28 minutes it speaks volumes on the African as a human being. Available (in U. S.) through United Church of Christ, 287 Fourth Ave., N. Y., and 1501 Race St., Philadelphia 2, Pa.; write to former to see if there's a print near you.

*None Goes His Way Alone*—30 minutes; color and B&W; the Methodist and other local rental libraries—should be seen by rural folks for the inspiration it can give; by city people for the information it can impart. It shows a rural church getting over dry-rot; it can warn city churches about the wet-rot that can overtake them; it can tell all churches that churches don't stay alive when people die in their spirits. Color rents for \$9.00; B&W for \$6.00. This is a good and useful film.

Two titles for children on Africa: *African Cousins*—a typical day in the life of a 9-year-old African boy; and *Bantu Girl*—what she does and thinks one day of her life. Both 13 minutes; and from BFC (220 Fifth Ave., N. Y. 1) and from many rental libraries. Both are good films, and useful. Rental \$6.00.

## Filmstrip Notes

*Sketchbook On Greatness* is a 64-frame color filmstrip for Junior and Senior Hi young people (and adults) which presents the life and work of three great Christian leaders—Eckhart, Savonarola, and Erasmus. The excel-

lent user's guide sets the purposes and possibilities when used in several ways, and with different age levels. The script is by H. C. Ahrens, Jr. and the art by Oliver Grimley. Good and useful, and available from Christian Education Press (CEP), 1505 Race St., Philadelphia 2, Pa.

When the Radich family moved into the neighborhood their coming put a lot of people to the test: *How Do You Love Your Neighbor?* asks just this question, and goes on to give some of the cliché answers. All the while, boys and girls and young people in church school classes and departments will find themselves thinking and acting like the neighbors of the Radich family—and repenting for their clumsy version of Christian living. The guide gives helpful suggestions as to how to get educational power out of this package. A very good job. Script by Eleanor Hull; photography by J. Nettis. From CEP.

There is a difference between the Protestant and Roman Catholic view of just about every item in religious faith, and some of these differences constitute the subject matter of *Sons and Heirs*, and, *Nancy Has A Catholic Friend*. Based on the concept that we should know something of the faith of our neighbors, these two color (art) filmstrips hit some of the main points. The first is for youth and adults; the second for Primary and Junior children. Recommended. Available from CEP.

*Book Making Town In Liberia*; from Lit Lit, 156 Fifth Ave., N. Y. 10; color; use-time 20 minutes; photography; rental \$2.50; sale \$5.00, and a bargain at this price. Excellent job in content, script, and pictures. Presents step by step what happened in Wozu when the Sadlers brought the town up to literacy. For use with Juniors and up to give information, inspire study, stimulate reading.

*A New Day For African Women*; from Lit Lit; color; use-time 20 minutes; color; photography, rental \$2.50; sale \$5.00. Shows what can happen when the African woman is freed by reading to make choices. Good script; fine pictures. Useful with young people and adults to give information and develop interest.

*A School Bell Rings In Angola*; from United Church of Christ, 287 Fourth Ave., N. Y. 10; and, 1501 Race St., Philadelphia 2, Pa.; price not known; color; excellent photographs and script; use-time about 12 minutes; Primary and up. Story of a little boy who wanted to go to school and who could not. Six or seven others in this same series by Dickie Sada. Ask for information.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## The Pioneer Burro

(Pat Dowling Pictures, 1056 South Robertson Boulevard, Los Angeles 35, California) 14 minutes, 16mm, sound color, 1959. \$135.00

### Description

*The Pioneer Burro* portrays the role of the burro in the settlement of the West as it teaches interesting details of the life of the typical solitary pioneer prospector who opened these unknown regions to human habitation. In this film the role of the burro is entwined with the fate of the prospector in scenes which depict the conditions under which the gold seeker labored, and it illustrates the methods and processes used to claim the precious metal. The plot of *The Pioneer Burro* carries the prospector and the burro through the perils of the mountains and the desert and paints a picture which convincingly endears the memory of the burro in the romantic history of California and the West.

The opening scenes of the film survey the mountain range in California in 1849 and the narrator explains that gold had been in the mountain range unnoticed for thousands of years until water washed particles down the slopes into the river beds and left deposits. Pioneers came to claim this gold. A prospector is shown as he trudges along holding in his hand a lead rope which is attached to a heavily loaded burro that patiently follows the man across the arid land. The man and the burro are an inseparable team in the quest for gold.

During the search for a strike the prospector stops to take a dirt sample from a dry stream bed and loads it on his burro's back to be carried to a running stream where it can be panned for its gold content. The next scene shows the prospector washing the sample beside a stream. The lighter materials are washed and floated away to leave the heavier materials and the gold, if any, in the pan as sediment. After continued washing the bright and shiny bottom of the pan indicates that this sample contains no gold. The prospector and the burro move on, now doubting the exaggerated and false stories of great wealth just for the taking which had been told in the East.

"Gold is where you find it" is a saying which illustrates the lack of systematic knowledge of prospecting that existed among the uninitiated gold seekers as they pursued their dreams of great wealth. The prospector and his burro unwisely wander away from the stream beds and into the uncharted arid lands where they become lost. After the prospector drinks all of the water the heat begins to sap his strength and reason, but the burro steadfastly moves along under his heavy burden. Heat and frustration overcome the prospector and he turns the burro loose and begins to search frantically and at random for water. The burro, having been freed, discovers a water hole in the desert and stands nearby to notify his master of his life-saving find. The prospector stumbles and crawls to the water and drinks his fill while the burro just stands by as though "it is all in a day's work."

The next scenes show the prospector and the burro tortuously scrambling up a steep mountainside. The burro is surefooted under his burden as he ing the load of the prospector's food, cautiously picks his way upward carry-tools, and supplies. When they reach a stream the prospector labors in the shallow bottom with pick and pan while the burro rests and dines on "anything that grows and is not too bitter." The narrator explains that an average pan of gold may be worth fifty cents and the prospector may collect as much as twenty-five dollars, a day, depending upon the richness of the deposit he is working.

Following is a sequence which deals with gold mining processes. The cradle, a device which could handle five or six times more gold than hand-panning, was introduced in the West. This new equipment added to the burro's burden but he carried on in his usual dependable fashion. The prospector is shown in close-up views as he loads the cradle hopper with a sample, pours water over it, rocks the cradle, separates the worthless materials from the hopper, and retains the heavier material and gold as sediment in the cradle bottom.

When the pay dirt was found some long distance from water the burro had to transport load after load over the rough terrain in the heat and dust. Whenever the claim was rich

enough the prospector and the burro worked all day for months to claim enough gold for the prospector to return home. Sometimes this drudgery and boredom was relieved by rare finds of great value. This day the cradle hopper caught and held a nugget of pure gold worth a hundred dollars or more. The prospector picked it up, inspects it carefully, and leaps for joy. He runs to the burro to show his good fortune but the burro simply looks on uncomprehendingly, stolidly refusing to share the prospector's enthusiasm.

The closing sequence deals with the loneliness of the pioneer prospector who had only his burro for a companion for months at a time. At a camp fire in the wilderness at night he sits and longs for his loved one and gazes at a treasured portrait by the light of the fire. The narrator explains that many prospectors did not find riches in gold but they did, however, find treasure of more lasting value in the West and stayed on to settle the region.

*The Pioneer Burro*, in a summary recounts the qualities which nature gave the burro that admirably fitted the little animal for the role it played in the settlement of the West in scenes which recapitulate previous scattered views and comments. The burro was not severely affected by the heat, it could go long periods without water, it was surefooted and cautious in the mountains, it could easily find food in the mountains and on the desert, and it was a patient and uncomplaining beast of burden. At the end of the film the prospector and the burro are shown yet wandering across the arid land in a continuing search for gold.

### Appraisal

*The Pioneer Burro* should be especially interesting to pupils in the elementary and junior high school grades and will serve to give an emotional component to the learning of historical facts. The appeal of the burro as a focal point of the film continuity adds a charm to the presentation which should please general audiences as an entertainment feature. It points out the hardships which the pioneers endured during the gold rush and indicates that wealth was obtained by only a few persons, but

## PREVIEW 10 NEW CORONET FILMS FOR SOCIAL STUDIES

These new Coronet films for social studies in the secondary grades have been made with the same careful planning which characterizes all production at Coronet—months of doing topic research, correlating subject matter with the curriculum, insuring accurate content and seeking the active guidance of leading educational authorities. The result—films of the highest quality available anywhere!

Preview these new selections for purchase consideration—there is no obligation except for return postage. List your choices separately, or check them on this page! Final selections are obtainable either in full natural color or in black-and-white.

- American Indians Before European Settlement (11 min.) Sen. High.
- Ancient Paestum: City of the Greeks and Romans (22 m.) Sen. High.
- Decline of the Roman Empire (13½ min.) Junior, Senior High.
- Geography of South America: Five Northern Countries (11 min.) Intermediate, Junior High.
- Germany: Feudal States to Unification (13½ min.) Senior High.

## CORONET FILMS

in the main the greatest values which came from the turbulent period in American history were not gold. The film has two main themes—that of the adaptation of the burro to the conditions of gold prospecting during the time and the typical fate of a pioneer prospector who came in search of gold. Within this development a close-up view of hand mining methods is presented. The implication of the conditions under which the prospector labored and the resulting settlement and development of the territory seems the more important theme in spite of the prominent place the burro holds in the film title. It teaches some facts about the location of gold, how it is mined by hand methods, and the manner in which it is distributed in the earth. It also shows how natural qualities of an animal peculiarly fit it for a particular task and the importance of such an animal in the development of an enterprise.

—William A. Wheeler

### Man of the Century: Churchill

(McGraw-Hill Book Company, Text-Film Department, 330 West 42nd Street, New York 36, New York) 56

minutes, 16mm, sound, black and white, 1959. \$250.

#### Description

As the title suggests, the eventful life and critical times of Winston Churchill are treated in a film that launched the Twentieth Century Series on October 20, 1957, over the CBS Television network. Walter Cronkite's narrative selects, interprets, and ties together incidents in Sir Winston's public career; Churchill himself plays the hero's role. Supporting roles in this epic-drama are played by Lenin, Stalin, Hitler, Chamberlain, Goering, Mussolini, Roosevelt, Atlee, Lady Churchill, and Queen Elizabeth. Thousands of people, both well-known and unknown, provide the settings.

The portrayal of Churchill's early life includes his childhood at Blenheim Palace and Harrow; his military career at Sandhurst, in Cuba and India; his experiences as a correspondent in the Boer War. He began his political career in 1900 as a Conservative member of the House of Commons. After joining the Liberal Party he was unseated because of his opposition to the Suffragettes. Then came the cabinet appointments of Home Secretary and First Lord of the Admiralty. His support of the ill-fated Gallipoli Campaign of World War I forced his

resignation. Believing that he was finished politically, he rejoined his old regiment fighting in France. But Lloyd George appointed him Minister for Munitions, in which position he promoted the use of the tank and the airplane.

With the Armistice, Churchill devoted his energies to an attempt to stop the communism that had so recently bloomed in Russia, but he failed in three successive attempts to gain a seat in Parliament. He became Chancellor of the Exchequer in Baldwin's Cabinet, but the 1929 victory of the Labor Party turned him out. In 1933 he began to warn an apathetic populace against Hitler. When Chamberlain signed the Munich Pact, Churchill called it "total and unmitigated defeat." When Britain entered World War II, Churchill returned as First Lord of the Admiralty. Then at the age of 65 he became Prime Minister.

Concurrent with events of the early war years—the evacuation at Dunkirk, the capitulation of France, and the air battle of Britain—Churchill's eloquent words and personal visits helped bolster the people's morale. When Hitler attacked Russia, Churchill threw his support to Stalin. Now that American support was needed, Churchill met Roosevelt off the coast of Newfound-

Two new  
primary films!

## Grandmother Makes Bread

Rabin and Billy visit their grandmother and help her make bread. The children learn good manners and health habits, and develop some beginning concepts of measurement, telling time, and temperature.

## The Miller Grinds Wheat

Grandmother takes Rabin and Billy to visit a small, modern flour mill. They see how the grain is stored, ground, sifted and sacked, and how the flour is shipped to markets and bakeries.

land to agree upon a declaration of principles, the Atlantic Charter. Later that year, when the Japanese attack on Pearl Harbor solidified American opinion, Churchill addressed a joint session of Congress a few days after war was declared. Then he went on to Ottawa to address the Canadian Parliament. He visited British and American troops in North Africa; met with chiefs of states at Casablanca, Teheran, and Yalta. Although he was dissuaded by the King from watching from a cruiser the decisive Allied invasion of Europe, he was on French soil four days later. Then came victory, the Potsdam conference and his dismissal by the British in favor of Atlee and the Labor Party.

After a period of painting, writing, accepting honors and making speeches (at Fulton, Missouri, and Massachusetts Institute of Technology) to warn the free world of the danger of Russian communism, he returned once more to No. 10 Downing Street. Since then he has received outstanding honors from his own people and their queen.

### Appraisal

Winston Churchill, *Man of the Century* is a film that will grow in value with the years. Newsreel documents and recorded speeches—raw material for historical research—endow the film with archival and reference value.

There is, of course, the problem of the film's length fitting the usual class periods. Nevertheless, resourceful educators can find ways of making this important film available outside of class. If high schools and colleges are concerned with devices for individual learning, it would make sense for a student to be able to check out such a film as this and be assigned to a projection room, just as he might now use microfilm in reference work. Also, special interest groups, such as history club, as well as general adult audiences, will find the film interesting as program material. More mature adults will find a reminiscence and synthesis of events with which they are already familiar. They will hear again excerpts from Churchill's famous speeches and see him deliver some humorous quips. Those who are sensitive to the aesthetic qualities of film will find unforgettable the quiet suspense of the sequence of Britain waiting for Hitler's air attack to begin. In another lyrical sequence describing the evening before the invasion of Europe, the film borrows scenes from the documentary *Listen to Britain*. The mood of the whole film is strengthened by the musical score of George Antheil.

McGraw-Hill Book Company and

other organizations are performing an outstanding service to education by distributing this and similar films thus assuring that television programs of lasting value are not one-time presentations.

—Ledford Carter

## The Colloidal State

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 14 minutes, 16mm, sound, color or black and white, 1959. \$165 or \$90. Teacher's guide available.

### Description

*The Colloidal State* shows examples of common colloids such as clouds, plaster, and paint, and defines a colloid in relation to solutions and suspensions. Characteristics of a colloid are shown to be a function of particle size with colloidal particles being too small to filter but too large to pass through a membrane.

A demonstration of the Tyndall effect in a colloid and the Brownian movement caused by the motion of colloidal particles is shown. Animation is used to show that this movement of the visible particles is a result of their continuous bombardment by invisible molecules.

Eight possible combinations for the forming of a colloid between any two of the three states of matter are shown, but the combination of a gas dispersed in a gas is ruled out since this is demonstrated to be a dispersion of molecules rather than a dispersion of particles of colloidal size.

Examples of the manufacture of colloids include grinding pigments, emulsifying non-mixing liquids, and coagulating molecular particles to colloidal size. Another example of the dispersion of a colloid shows the effects of like electrical charges in holding the particles in a dispersed form. Cancellation of these charges through the addition of an electrolyte or through the use of a high voltage electrical charge demonstrates the destruction of a colloidal dispersion.

The film ends with a number of examples of the uses of colloids in the preparation of leather, casein, homogenized milk, and dyed fabrics.

### Appraisal

*The Colloidal State* provides an overview of the characteristics, properties, preparation, and uses of colloids. It progresses deliberately from concept to concept so that students at all levels in a chemistry class will gain from its use. This film will be valuable both as an introduction and as a sum-

mary for a unit on colloids in high school chemistry.

—Merlyn Herrick

## Twentieth Century: Gandhi

(McGraw-Hill Book Company, Inc., 330 West 42nd Street, New York 36, New York) 25 minutes, 16mm, sound, black and white, 1959. \$135.

### Description

*Gandhi*, in portraying significant events in the life and work of Mohandas K. Gandhi, whose name is synonymous with non-violent passive resistance to oppression and universal brotherhood and love, highlights the history of India's struggle for independence from British rule and the subsequent conflict with the Pakistani.

The film opens with a picture of Gandhi, the political moralist, dressed in a loin cloth, imposed over a map of India. The title pops on and the narration repeats some of the paradoxes of Gandhi's philosophy. Following is a visual study of contrasts as striking as the philosophical beliefs. The opposing forces—moral and material—are presented in scenes which emphasize Gandhi's frailness and British military power. Gandhi's humility and India's princely pomp and cere-

mony, imperial wealth and splendor and India's poverty and squalor. The narration explains the relationships and characteristics of the opposing powers and sets the roles that are to be depicted in a complex and difficult struggle for dominance as the "triumph and tragedy" of Mohandas Karamchand Gandhi.

The next sequence explains the beginning of open conflict as the boycott of British textile goods that established the spinning-wheel as the peaceable but relentless symbol of Indian resistance and portrays scenes of Gandhi's pilgrimage to the sea in the twenty-four day Salt March where the movement of civil disobedience was initiated by Gandhi when he willfully picked up free salt from the seashore in defiance of British law. Following the start of the conflict a series of views documents the attempts of the police to enforce obedience to the law through force of violence and brutal whippings of subjects who meet the challenge by submitting to the physical punishments of the authorities while returning only stubborn non-cooperation and love.

The developments in the negotiations with the British government are followed as Gandhi, the chosen representative of the Indian Nationalists

Congress, goes about his work with the people who rally around him. He is shown in views which give insight into his personality and his methods of carrying forth his movement. Gandhi is pictured during his activities on shipboard while traveling to England to confer with the British leaders, upon the arrival of his diplomatic party in England, during his stay in London, and in the town of Lancashire among the unemployed textile workers who were suffering because of India's boycott of their goods. The British government officials state their views of the Indian situation in a short report to the news cameras after the breakdown and failure of the negotiations and give some indication of the lack of English unity on Indian policy. Meanwhile Gandhi and his contingent depart and this sequence ends with a portrayal of the welcome Gandhi receives upon his return to India, in spite of his failure to gain relief from their pressing problems.

A fairly rapid succession of related scenes pulls together the events that highlight the solution of the problem of separation and independence. A change in the British government culminates in Gandhi's incarceration, during which he begins his protest

"A prism derives its name from the shape of its base."

## DISCOVERING SOLIDS

A series of three films applying mathematics principles to space perception.

I VOLUMES OF CUBES, PRISMS,  
AND CYLINDERS

II VOLUMES OF PYRAMIDS,  
CONES, AND SPHERES

III SURFACE AREAS OF SOLIDS

Art, animation, and model demonstrations help develop formulas for finding volumes and areas of solids. Live footage shows the use of these formulas in practical situations.

Carefully produced under the supervision of Dr. E. H. C. Hildebrandt of Northwestern University's Department of Mathematics, these films meet the demands of the revitalized mathematics curriculum.

fasts to effect improvements in social conditions at home. These fasts cause him criticism from within the Indian population. When the British government grants Gandhi his freedom he continues his work for the aims of Indian independence and national unity. During this period the action of the British government in forcing India into World War II without the consent of the Indian leaders brings about an intensification of the Indian policy of non-cooperation after which the British make some concessions to Indian demands and promise Dominion status to the colony at the successful completion of the war. The Moslem leaders demand a partition of the country when India is separated from Britain and remain adamant in their refusal to be reconciled with the Hindu majority in spite of Gandhi's pleading and negotiations with them. Partition having been effected the British troops withdraw and then the story of Gandhi's tragedy begins.

Scenes of brutality and violence committed by Hindu and Moslem, each against the other, follow as refugees move across the borders of India and Pakistan during the population shift which involves fifteen millions of people. At the age of seventy-eight

years Gandhi begins to work frantically for a cessation of the violence and peace and understanding between Hindus and Moslems, and he and his followers walk through the countries to administer wherever help is needed. In the period immediately after India's separation from foreign rule Gandhi emphasizes human brotherhood and begins another fast to protest the treatment of the Moslem minority by the Hindus who are now led by his former associates in the struggle for independence. As the Mahatma comes out to say his daily prayer in the garden in Delhi on January 30, 1948, he is met by the usual throng of worshippers, but on this day as a worshipper kneels before him three shots, deliberately dispersed, ring out. Gandhi falls dying, the victim of a fanatical Hindu brother.

The film ends at the funeral pyre with a eulogy by Nehru in reverence to the Mahatma, "The Great Soul." As the film ends the narration and captions present the essence of Gandhi's philosophy: "I believe in the supremacy of moral law—the law of truth and love."

#### Appraisal

This film is a study of contrasts—extreme against extreme in mortal

conflict and the material force against moral resistance. While presenting historical facts about an important movement in the history of Western culture, it portrays a dramatic theme which is ever-present in the culture of all peoples, the spiritual forces of the culture arrayed against the power of material wealth and comfort in the determination of the dominant values of the society. *Gandhi* is a valuable historical record in the decline of colonialism as a world movement. It also has significance for persons who are interested in a visualization of principles which are expounded in the dominant religion of the Western culture. This film contains footage from old filmic records having technical quality which is poor by comparison with the present standards of film production but which adds authenticity. Teachers of world history, political sciences, and religious classes should find this film useful in presenting information concerning the politics of the period and pointing up discussion problems. Leaders of adult discussion groups should also find this a rewarding film. In fact, this production should be enjoyed and understood by persons from high school through college and adult levels.

—William A. Wheeler

## The Christmas Deer

### A Legend Retold

- Winner of "Chris" Award, Greater Columbus Film Festival, 1959
- Widely used by Schools, Libraries, and Churches
- Something "different" in a Christmas film

Now is the time to preview . . .

#### THE CHRISTMAS DEER

#### THE CHRISTMAS DEER

(A Legend Retold)

(Grover-Jennings Productions, Inc., P. O. Box 303, Monterey, California) 14 minutes, 16mm, sound, color (\$145, discounts on quantity purchases). Teacher's guide available.

#### Appraisal

People of all ages should enjoy the quiet beauty, the allegorical charm, the quaint music, the touching drama and the superb camera work in this Christmas-time film. Combining the mystical with the real, *The Christmas Deer* has appeal for groups of all ages. Its underlying theme — the joy of giving — is beautifully and convincingly developed. The symbolical deer as the Christmas spirit captivately contributes to the feeling of unreal reality. As the introductory narration observes, "This is a film for those who can believe more than what they see."

—Carolyn Guss

## Students Bring History to Light

(Continued from page 538)

We had two children under 16. He may well have settled here to engage in expediting the traffic over the carry.

A small pewter spoon and two small two-tined iron forks, one very small brass button, a child's slate and a slate pencil would seem to show that there were children present. Then we have a couple of brass thimbles and one piece of jewelry that indicate the presence of a woman.

In 1792 a diary of a well known figure mentions taking refuge in a storm at this same spot and being given lodging and food by the good widow X." We know then that Mr. X died sometime between 1790 and 1792. There is also strong support to the supposition that he was a veteran who came through the Battle of Oriskany. There is a vague tradition that points to an unmarked burial area nearby, but no one knows just where.

Documents say further that widow X stayed on at this location until 1805, when she returned to her family further down the Mohawk Valley. Abundant signs point to the fact that she was burned out. The appearance of so many items in one general spot, as coins and buttons and so many fragments of exotic blue and white china which must have been close to her heart, indicate that there was no time to save anything.

The students taking part in this project were curious and eager to find new things about this site and to make their own interpretations. There were hundreds of questions, most of which we felt could be answered. They were willing to put long hours of hard physical labor on this problem. One boy who was so handicapped that he has to use two crutches to move found an activity in which he could participate. He now thinks he would like to be a history teacher.

Not only have the participants in this project helped to make a real contribution to their community, but they have learned some aspects of scientific method of research, archaeological techniques, documentary investigation, statistical concepts, and to clarify existing interrelationships in the area of logic.

Much of this material has been used in the teaching of logic in the

classroom, especially in the process of inductive reasoning. The actual artifacts were used.

Because of the magnitude of this project we have not only worked with school people, but have now extended it to include other interested groups and individuals. Both civilian and military personnel from Griffis Air Force Base have joined us in learning about our history through this project. A healthy spirit of cooperation has developed. Through history we have helped to open our doors to "strangers."

Through our historical society, plans are now being formulated to

bring more of these elements together for a more thorough study of the whole Oneida Carry complex.

This is not a "one shot" affair to be forgotten when the "Year of History" is a matter of record. It is a project of continuing interest for years to come. Our history is for everybody.

When all the evidence is in and our newly organized Fort Stanwix Museum is ready to receive the public, we plan to use our materials to show pioneer life at the Great Carry with a diorama of this site and appropriate background materials in relation to our finds.

# New Equipment and Materials

For addresses of the sources supplying information on which these listings are based, refer to **Directory of Listed Sources**, page 569. For more information about any of the equipment announced here, use the enclosed reader service postcards.

## NEW EQUIPMENT

Closed-circuit TV Camera

### CAMERAS — Movie & TV

**Five Closed-Circuit TV Cameras.** One is a 4-lens turret viewfinder model, the others are basically self-adjusting automatic models, two of them with but a single control, the on-off switch. The cameras weigh 12 lb, measure 5½x7x11 inches, put a 1-volt video signal into a 75 ohm coaxial cable. Standard 16mm C-mount lenses. Remote control features (pan, tilt, iris, focus and zoom) can be added. Two monitors complete the line, 21" and 14". Mounting, optical and distribution accessories available. MOTOROLA  
For more information circle 101 on coupon

### CAMERAS — Still

**Startech Closeup Camera** uses 127 film for closeup and extreme closeup work; has built-in, parallax-corrected direct viewfinder, integral flash gun; operates at f64 for depth. Camera, complete with 1 roll of Ektochrome 127; 12 M2 flashbulbs; 2 penlight batteries; 2 portrait lenses; and easel \$34.75; accessory lens to permit covering 36x36" field \$4. KODAK.  
For more information circle 102 on coupon

### PROJECTORS — Still

**Crestline 500 Slide Projector** emphasizes "edit-while-showing" technique, in that 36 slides may be shown in any sequence, pause, skip, repeat at will, in any mounting and in any of the standard or low-priced trays. 500 watt; 4" f3.5 lens, American made. \$69.95. BOHM.  
For more information circle 103 on coupon

**Keystone Tachette**, a near-point, hand-operated Tachistoscope that shows the same materials (shorthand, typing,

reading, number skills, and languages) used in the standard Keystone Tachistoscopic Services. Flash-speed is adjustable down to 1/100th second. KEYSTONE VIEW.  
For more information circle 104 on coupon

### SOUND EQUIPMENT — & Accessories

**Ediola Price Cuts.** Price reductions have been announced on the Ediola AO combination action viewer and optical sound reader; on the Model AM magnetic film and tape viewer combination, and on the AOM optical/magnetic-viewer combination. The prices of the double system Magnolias remain unchanged. S.O.S.  
For more information circle 105 on coupon

**Exclusively A-V Tape Recorder.** New model AV-5 reportedly designed exclusively for the A-V field, features extra rugged case, giant tape storage compartment, built-in tape splicer, dynamic microphone with stand, complete instructions on case, push-button operation, wt. 20 lb., \$229.95; stereo \$259.95. PENTRON.  
For more information circle 106 on coupon

**Lavalier Microphone** less than 4" in overall length. Plastic alloy diaphragm reportedly affords maximum protection against wind blast. Necktie clip and impedance. 70-12M cps. \$59.50. AMMIKE.  
For more information circle 107 on coupon

Four-track Stereo Recorder

**Norelco Continental "400."** Four-track stereo and playback tape recorder, records and plays back stereo and monaural through unit itself or through external hi-fi system. Inputs provided for recording from microphone, tuners and phonograph; mixing facilities for recording two signals simultaneously or in sequence; output monitoring jack; self-contained PA; 3-speed; stereo microphone; two 4-watt power amplifiers; 5 outputs; Model EL3536 \$399.50. NAPHILIPS.  
For more information circle 108 on coupon

**Portable Stereo Record Players** with companion remote speaker detachable from main unit for positioning up to 20 feet away. 4-speed. "Dante" model has

inter-mix automatic changer, four 4" speakers; \$99.50. "Stereo-teen manual, two 4" speakers, \$49.50. ZENITH.  
For more information circle 109 on coupon

Portable Stereo Record Player

**School Tape Recorder**, housed in portable booth-type case in which the front doors open out to provide side panels of a booth, lined with polyurethane foam for deadening sound. Provides an independent listening-responder-recording station at any location. Records simultaneously from student mike and remote line, or from master track to lower track; plays back upper master and lower student recording erases only lower. 3.75 or 7.5 ips. \$349.50. CALIFONE.  
For more information circle 110 on coupon

**Single Play Phonograph**, 4-speed, AC 4" speaker, volume and tone controls "Cheerleader" \$29.95. ZENITH.  
For more information circle 111 on coupon

**Transceiver Kit** for 2-way radio telephone communication on 11-meter "Citizen's Band" class D operation. No code or radio theory tests or radio operator's license required. Any U.S. citizen over 18, who is eligible for license, may build and operate under new FCC regulations. Kit includes: parts, cabinet, crystal for one of 23 available channels, \$42.95. Antennas: \$9.95; \$19.95. HEATHKIT.  
For more information circle 112 on coupon

**Transistor Pocket Radio.** Reportedly triples signal sensitivity, produces 100 milliwatts undistorted power output wt. 20½ oz., 3½x11½x5¾", \$75. ZENITH.  
For more information circle 113 on coupon

**"Tutorette" Record Player and P.A.** 12watt. Designed for language lab as well as regular player and public-address use. By means of plugged-in earphones student may hear himself repeat instructions on a record, or hear tape recorder or radio fed in through an auxiliary input. Four speeds, fixed, Model 300L \$104.25; variable 300VL (20%; stroboscope) \$126.75. AUDIOTRONICS.

## TELECTRO

### TAPE RECORDERS

offer you  
a new high in quality  
a new ease-of-operation  
AT INCREDIBLY LOW COST

Where quality is demanded, where versatility for every application is needed, where ease of operation is a must . . . but where cost is an important factor

#### TELECTRO IS THE ANSWER

Educators will applaud Telectro tape recorders for their fidelity of recording and playback, for the lightness and ruggedness that makes them ideal for educational applications. And, their incredibly low prices . . . as low as 79.95 . . . makes them economical enough to fit into the most stringent budget.

There are six Telectro models to choose from, ranging from the compact Trendsetter 1985 through the magnificent Trophy 359

**TELECTRO**  
*Trendsetter*  
1985

Convenient one-knob control. Complete with microphone, tape and reel.

**99.95**

**TELECTRO**  
*Trophy*  
359

Includes complete public address facilities. Simplified pushbutton operation. Complete with microphone, tape and reels.

**164.95**

Investigate TELECTRO right away! A post card will bring you full information on all Telectro tape recorders. Write Dept. SC 10

# TRADE NEWS

Transistor radio explains exhibit.

### Peripatetic Radio Lecture

As a visitor to an art gallery or other exhibit moves from place to place, a 4-ounce transistor radio hung around his neck explains what he sees. The message, either taped or oral, comes from a private transmitter using different channels for the various parts of the exhibit so the visitor's 1/2-ounce headphones carry only information that is pertinent to his location. This information comes from an Eastman affiliate that supplies the raw material for the radio's plastic housing. The system is produced by McIntosh Lectour, Inc., 1906 M. St., NW, Washington 6, D.C.

### Expanded Screen Market

A rear-projection screen makes up practically one whole wall in the Command Conference Room at Headquarters Eighth Air Force, Westover, Mass. Principal use is to permit simultaneous showing of two or more still or motion pictures to contrast old and new phases of subject under consideration. The 155 x 68 inch Polacoat conference screen is made of quarter-inch-thick plastic which effectively insulates the conference room against all sound from the projectors.

### NAVA Board Meets

The Board of Directors of the National Audiovisual Association is to be held October 16-17; the Executive Committee meeting the previous day. Board members J. W. Kintner and Earl Harpster were elected to serve with the officers on the Executive Committee.

The 1960 convention is to be held at the Morrison Hotel, Chicago, August 6 through 9, or earlier if possible. The annual Western Conference is to be held at Colorado Springs, January 14-17, 1960. The "southern" midwinter meeting is to be held in the vicinity of Washington, D. C.

One of the items on the agenda of the October board meeting will be a report of a committee now surveying possible convention sites, dates, prices, etc. for the 1961 and 1962 conventions.

Membership dues are to be raised by an approximate 40 per cent. The annual

meeting adopted congratulatory resolutions honoring Bruce Mahan, Prentice C. Ford and Alfred E. Devereaux, the latter on his completion of 45 years in the A-V field.

J. K. Lilley, Jack McCracken, Howard Kalbfus and Robert Maybrier were elected to a 3-year term on the Board of Governors of the National Institute of Audio-Visual Selling.

### Ralke Moves

After 23 years in a downtown Los Angeles location, "Bill" Ralke has moved to his own 3500 sq. ft. building, at 841 Highland Ave. Ralke helped engineer the many motion picture installations at Disneyland Park, and the Circarama 11 projector combination that served well at the U. S. exhibit at the Brussels World Fair and subsequently at the American Exhibit in Moscow.

### Trans-Lux Screens to Moscow

The American Exhibit in Moscow is showing its Russian visitors what make America "tick" on 21 large seamless rear-projection screens custom made on U. S. government contract by the Stewart-Trans-Lux Corp., Torrance, Calif. Seven of the screens, each measuring 30 feet wide and 20 feet high, are used in the huge geodesic dome building, where seven different pictures are projected simultaneously. Eleven screens are used to show the 360-degree Walt Disney "Circarama." Originally adapted for Hollywood studio background process photography, the seamless plastic screens can now be made in any size up to 86x46 feet.

### Quits Selling

The Mental Health Materials Center, 104 E. 25th St., New York 19, is discontinuing the sale of films in order according to its announcement, to concentrate on evaluation of films for subscribers. Its preview and new stock prints are available for purchase at reduced prices.

### Films at Nurses' Convention

A total of 21 motion pictures shown over a period of four days were a feature of the recent bi-ennial national meeting of the American Nurses Association and the National League for Nursing. Professionally qualified commentators were assigned in advance to each of the films, their names were listed in the official program. The daily themes in sequence, included: Social Psychology; Clinical Areas; Child, Patient and Nurse Relationships; Nursing in National Defense; and Hospital Nursing.

### Coronet's Chemistry "Filmset"

Coronet Films announces seven new films to complete an 18-subject series covering the basic units of this subject as taught in most high schools. Purchasers of this set of films receive as a free bonus a cabinet to house them, a manual to guide teachers in their use and extra copies of the teachers' guides.

Atomic sub is provided with Special Screens.

### Movies on New Atomic Sub

Movies and slides will be shown for both entertainment and instructional purposes on specially designed Radiant Wall screens installed in the new atomic submarine "George Washington," the first nuclear-powered craft designed to fire the Polaris missile from submerged positions at sea.

### Orr-Ampex Merger

Orr Industries, Inc., manufacturers of "Irish" tape, has become a division of the Ampex Corporation. It will continue to operate at Opelika, Alabama, with the same facilities, management and employees.

### People in the News

David Wisner, formerly manager of the Calvin Company training films division, has joined Delta Productions, Inc., as vice-president in charge of production. Wisner's background includes work for the Moody Institute of Science and Worldwide (Billy Graham) Pictures, California.

Eric H. Kiehl, director of research and production planning for Church-Craft Pictures, has been awarded the degree of Doctor of Theology at Concordia Theological Seminary, St. Louis.

Carl Cannon is the new director of program promotion and television station relations for the Broadcasting and Film Commission of the National Council of Churches. He will deal with 533 TV and radio stations carrying BFC programs.

Da-Lite Screen Company announces the appointment of Don Browne as Sales Promotion Manager. Don, 28, has recently been with Kaiser Aluminum in Chicago, and prior to that with D'Arcy Advertising.

Joseph Bower, formerly district manager for Encyclopaedia Britannica Films in Pennsylvania, replaces Walt Renner, in southern Illinois. The latter has been assigned to the Florida district.

A. Philip Sherburne is the new general sales manager of Chartpak, Inc., with Russell B. Pierce as assistant sales manager and in charge of sales promotion.

John Ercole, ace wartime cinematographer, has joined Transfilm, Inc., as director of photography.

Walter Lowendahl, a Transfilm Inc. executive for 17 years, has joined Wilding, Inc., as an executive producer and will head up the Wilding eastern division in New York.

### 4-Track Stereo

The Magnetic Recording Industry has adopted 4-track 7½ ips stereo tape as standard, according to Ampex Audio, and several hundred new pre-recorded releases are expected to be on the market this fall priced at an average of \$7.95. The Ampex 4-track conversion kit at \$50 includes installation at authorized service centers. The Model 900 Ampex already plays the new 4-track as well as 2-track recordings.

### Universities Combine Film Service

The University of Michigan and Michigan State University may be rivals on the football field, but their audiovisual centers work together. A joint film catalog makes some 4,500 motion pictures available to schools throughout the state, and films momentarily unavailable from one institution are to be furnished whenever possible by the other. A similar arrangement prevailed, if memory serves, some 35 years ago between the universities of Kansas and Colorado.

### Windowless Schools

The United States Air Force Academy at Colorado Springs is said to blaze a

trail to the windowless schools of the future, a concept touched on by editor Paul Reed in this magazine several years ago. Architects claim to have achieved a "balance in psychological effect" by lighting classrooms and study areas exclusively by artificial light, to achieve "cells of Concentration." Corridors and non-study areas are along the outer walls, expansively glassed to bring in the outdoors.

### Bell Labs Make College Films

On the advice of educators, the Bell Telephone Laboratories have set up a Science Film Production Unit for the primary purpose of making audiovisuals that college instructors can use to complement their regular lectures in science and engineering. Three motion pictures, two sound filmstrips and a 90-minute record album have already been completed. (See listings in New Materials)

### NAVA Exhibitors Committee

This committee, which acts as a liaison group with the NAVA Board of Directors, has elected V. C. Doehring, of the Jam Handy organization as its chairman. Newly elected members for a two-year term are Paul G. Kiehl, Churchcraft Pictures; Robert Maybreier, Da-Lite Screen Co. and Paul Ruedemann, Technical Service, Inc. Holdover members are Martin F. Myers, Charles Beseler Co., and Ben O'Dell, Cathedral Films.

# Comprehensive new book on overhead projection . . .

## “They See What You Mean”

- Advantages of overhead projection • Principles of transparency design
- Invaluable to teachers, executives, salesmen

Here, in 88 fact-packed pages, is a complete treatise on overhead projection . . . its advantages . . . and how to use it effectively. Prepared by Ozalid's Audio Visual Department experts, it contains hundreds of tips on preparing transparencies by every known method, simply and inexpensively. Reveals secrets of successful presentation techniques. Tells how to create visual ideas. Profusely illustrated. “Must reading” for anyone who is using, or intends to use, overhead projection.

Only \$3.75 at your nearest Ozalid Audio Visual dealer (listed). If he cannot supply you, write to: Ozalid, Dept. I-11, Johnson City, N.Y.

where you need it! when you need it!

There's no need for a special room assignment, no delay, when the classroom has LEVOLOR A.V. (Audio-Visual) VENETIAN BLINDS. These blinds give complete control of ambient light to suit the subject, projector and student activity.

Today, any classroom can be converted for Audio-Visual instruction inexpensively by the installation of LEVOLOR A.V. BLINDS.

Write for Levolor's invaluable survey report "How Dark Should Classrooms Be For Audio-Visual Instruction?" No charge or obligation. Write to Audio-Visual Dept., Levolor Lorentzen, Inc., 720 Monroe St., Hoboken, N. J.

HOW DARK SHOULD CLASSROOMS BE FOR AUDIO-VISUAL INSTRUCTION?

Be sure to specify

THREE CUB SCOUTS →

ONE RCA  
"LIFE-TESTED"\*  
16MM PROJECTOR . . .

THREE "PROFESSIONAL" PROJECTIONISTS!

Turn over an RCA "Life-Tested"\* 16mm Projector to amateurs of any age. Before you know it, they'll be rolling a show with the pictures and sound you'd expect from a veteran. That's the way RCA engineers planned the entire RCA "Life-Tested"\* line, which includes:

**"Life-Tested"\* 16mm Senior Projector**  
Easiest, fastest film threading in the 16mm field, operation quiet as a whisper, uses 1200-watt lamps to throw 20% more light on screen, separate loudspeaker for large areas.

**"Life-Tested"\* 16mm Junior Projector**  
Built-in lubrication, designed for 1200-watt lamps which give brightest pictures, pressure guides treat films with velvet touch, easy thread-

ing in less than 30 seconds, single compact case including loudspeaker.

**"Scholastic" Audio Aids**

New and ruggedly-engineered line with special classroom features: Record players have metal reinforced corners and speaker grilles; guarded tone arms. Push button Tape Recorder and High Fidelity Record Player are equipped with "Tri-Coustic" speaker system for high fidelity sound reproduction. At your RCA Audio-

Visual Dealer's.

See, hear, and *operate* them at your RCA Audio-Visual Dealer's . . . or have him come to your school and demonstrate. Look for his number under "Motion Picture Equipment and Supplies" in your Classified Directory.

\*Rigid endurance standards have been set for RCA "LIFE-TESTED" Projectors. Individual components as well as finished projectors are subjected to continuous testing to evaluate the durability and efficiency of all operating parts. "LIFE-TESTED" at RCA means better, more reliable performance from RCA Projectors.

# SIGHT PLUS SOUND PLUS THE ECONOMY OF 8mm FILM...

Complete with microphone, in handsome fabric-finished case, \$399.50

## with the ELITE 8mm SOUND-ON-FILM PROJECTOR

With the Elite, your students learn more, learn faster, learn more thoroughly. That's because the Elite enables you to add any pertinent sound track—voice, music, or both—to economical 8mm film. Student interest and retention are tremendously heightened; costs are kept to a minimum.

**Think of the convenience!** You can show the same film to junior grades in the morning that you show to more advanced grades in the afternoon, keying the sound track to the level of understanding of each grade. You can erase and re-make the sound track as often as you wish, with full brilliance and fidelity. And, the Elite is so rugged, so fool-proof and simple to operate that you need no specially trained personnel.

## Tandberg 5 3-SPEED, 4-TRACK STEREO RECORDER — PLAYBACK

Because of its unmatched precision of manufacture and record/playback fidelity, the Tandberg 5 is the ideal instrument for the educational field. It offers monaural and stereo recording and playback for use in the teaching of speech, music, dramatics, languages. It will record seminars and conferences up to 17 hours on a standard 7" reel.

Illustrated is the Tandberg Model 5-2. Complete with two TM-2 microphones, input and output cords, supply and take-up reels and transport luggage case, \$513.95.

A postcard will bring you full information. Address inquiries to Dept. V11

**Tandberg** of America, Inc.  
8 Third Avenue • Pelham, New York

## On the Screen

### Cover Scene

"Rockets: How They Work" takes the young student to some point in outer space to see how a rocket goes into orbit. The cover picture is taken from the production by Encyclopaedia Britannica Films, Inc., prepared in collaboration with Willy Ley, famous expert on rockets and space travel.

### The Passing Parade

10 years ago in Educational Screen:

The role of A-V in promoting better understanding was stressed—labor-management, inter-group, suburban film council. "Boundary Lines" was excitingly new. Extensive coverage of the 6th International Religious A-V Workshop at Green Lake. Paul Reed editorialized that "Principles are Principles" and that readers were reporting high interest in all phases of the medium and in all its diverse applications. The first full-page tape recorder ad appeared (Brush "Sound Mirror"), and EBF announced 11 new films, Coronet and Young America six each.

20 years ago in Educational Screen:

Two articles on handmade slides, a college field trip, adult preferences in film programs, an elementary school makes a movie. In his "Diversitorials," editor Nelson Greene bows to the popular demand that the 13-year-old monthly (theatrical) "Film Estimates" be continued. He had proposed their

demise in favor of a teacher-written mass evaluation project. RCA advertised make-your-own disc recordings; Bell & Howell offered for sound and two silent movie projectors; DeVry and Victor featured add-a-unit sound machines; Ideal Pictures offered its 20th Anniversary film catalog.

30 years ago in Educational Screen:

"Flagrant misrepresentation" of the Freeman-Wood findings on the nation-wide Eastern Teaching Films was charged by E. R. Enlow. Field trips, the Russian film, educational film production at Columbia University, demonstration of wireborne television, Fox 70-millimeter film, critical reviews of books, magazine articles and films, Knowlton report on classroom use of the Yale historical films. Acme and DeVry were advertising 35 mm portable motion picture projectors; Bell & Howell offered 16 mm.

### "Mickey" Leaves

Though leaving Educational Screen & A-V Guide to return to broader educational activities, I shall always treasure this audio-visual experience—and especially the opportunity it gave me to know many of the fine people who read and write for this magazine. My request that a successor be found was made when the August "Blue Book" was completed. The choice of Jim Cummings, an experienced editor on other trade magazines, is an excellent one and I know that all followers of EdScreen wish him well."

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**The Vikings**—In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**A Lesson in Mythology**—Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$7.00. With guide, \$7.30.

**Knights of the Round Table**—A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**Richard III**—Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50.

**Alexander the Great**—Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**Adventures of Robinson Crusoe**—In full color, 50 frames, a clear pictorial guide to the Defae classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$3.50.

**Hansel and Gretel**—In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kine-mins of Michael Myerberg's screen version, released by RKO Radia Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth**—In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**Ulysses**—In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

## New York Trade Show Covers Broad Field

"Sound and Vision as a Tool," the theme of the impressive trade show managed by Herbert Rosen in New York City Sept. 28-Oct. 1, was in fact applicable to a considerably broader field than just the "industrial film and audio-visual exhibition" to which it was applied. The Metropolitan New York Audio-Visual Association, regional branch of DAVI-NEA, arranged four afternoons of child-centered classroom A-V, daily demonstrations of closed-circuit TV, and a panel session chaired by Dr. Irene F. Cypher on "Improving the Quality of Teaching Through Materials."

Regional meetings were held also by the National Association of Educational Broadcasters, the National Visual Presentation Association, and the Industrial Audio-Visual Association. There were educational exhibits by the U. S. Naval Training Device Center, the U. S. Office of Education (with particular emphasis on the National Defense Education Act), the National Educational Television and Radio Center.

The more than 60 commercial exhibits from all over the country put chief emphasis on practical work-a-day applications of their equipment and materials. Victor Animatograph unveiled a new classroom 16mm sound

Mrs. Margaret Divizia, supervisor of the Audio-Visual Center of the Los Angeles school system, shows some of the materials contained in the audio-visual kits gaining popularity in schools. Mrs. Divizia appeared at a recent panel discussion on distribution held by Industry Film Producers Association. Other panel members include Dr. Martin L. Klein, at left, of television's "Adventure Tomorrow" show; William MacCallum, western manager of Modern Talking Picture Service; and Jay E. Gordon, chapter vice president of the association, who introduced the program.

projector; American Optical a revolving Pola-disc that adds "motion" to overhead transparency projection; Argus a TV camera that plugs into any light socket and connects to the antenna leads of any receiver; Da-Lite Screen a screen in a recessed housing for valance or ceiling concealment; Strong Electric its own newly designed 2x2 in. carrier for its big arc slide projector.

The noon-to-six hours (one day to 8 p.m.) encouraged attendance by many important A-V workers in the New York area.

## EFLA Re-elects Kone to Second 2-year Term

The board of directors of the Educational Film Library Association has announced the election of new officers at its October meeting in New York City. President Elliott H. Kone, Audio-Visual director of Yale University, was re-elected for a second two-year term.

Also re-elected as vice president and board member was Galon Miller, of the School City of South Bend. Frederic A. Krahn is the organization's new secretary. Newly elected EFLA board members are Iola B. Tryon of the Public Library of Middletown, Conn., and Dr. F. A. White of the University of Wisconsin. Together with administrative director Emily S. Jones, the EFLA officers will serve as the association's executive committee.

## 12th Canadian Film Awards

Judging from recent Canadian Film Awards, the twelfth annual competition will receive a record number of entries, according to Charles Topshee, chairman of the management committee of the awards. Closing date for entries is January 15. Films may be sent to 1762 Carling Avenue, Ottawa, Ontario, Canada.

## LANGUAGE LABORATORIES Go To School!

Califone's complete line of Language Laboratory components has been developed after extensive research into the requirements of Schools and Universities at all grade levels.

Recorders, playbacks, phonographs, consoles, booths, etc. — all manufactured by Califone — offer to the field of language education integrated equipment that is the most reliable, easiest to service and simplest to operate.

Contact your Califone Language Laboratory Dealer. He will help you determine your exact requirements.

# NEW HEADPHONE LISTENING CENTER

LANGUAGE STUDY

TRANSCRIPTION

PLAYER-

P.A. SYSTEM BY

# NEWCOMB

*... an economical unit of many uses*

The most versatile, most rugged equipment of its kind, the Newcomb AV-164V-LC8 is a complete combined portable transcription player and public address system. *In addition* eight pairs of pin jacks for headphones are built into the control panel for language study, library use, and group-within-a-group listening. Eight pairs of phones, brightly colored red and black to identify them as public property, are supplied in a compartmented case. Cost

of the headphones is so low that replacement is usually less expensive than repair. A jack for microphone permits a

student to listen to his own pronunciation. There are separate volume controls for mike and phono. The transcription player features a new four speed, variable speed, American-made motor, heavy turntable, deep-ribbed rubber record mat, new plug-in ceramic pickup cartridge, and hideaway compartment for power cord. The new 12 watt Bi-Coupled® amplifier is carefully matched to a large 12" dual cone speaker for highly efficient coverage. System is transformer powered for maximum safety, best performance. Ruggedly built for years of service... Newcomb audio equipment is truly an astute investment in lasting quality. Write for free bulletin describing the AV-164V-LC8.

NEWCOMB AUDIO PRODUCTS COMPANY Department C-11 6824\*Lexington Avenue Hollywood 38, California

Newcomb Professional Model SM-110 Stereo Tape Recorder is cybernetically engineered for intuitive operation.

Newcomb High Fidelity Classroom Phonographs are efficient audio tools for more effective teaching.

Newcomb High Fidelity Classroom Radios, AM and FM, are built to the same high standards of rugged construction and reliable performance as Newcomb phonographs.

Newcomb Transcription Players are available in 20 models ranging in power from 10 to 56 watts, with 1, 2, or 4 speakers.

## DAGE MOBILE TV brings studio broadcast quality to any classroom

Broadcast quality equal to that of professional TV studios is achieved by the Dage Educational Television System (ETS-1) . . . and it is completely mobile! Moves on silent casters through classroom doorways. Included in the system is the Dage 320-B series vidicon TV camera and console control center. The versatile 700-line resolution camera is

equipped with electronic viewfinder, hood, four-lens turret and tripod. It gives excellent picture quality, even of microscopic materials. Attractive console contains video monitors, camera controls, sync generator power supply and wave form monitor. Modular construction of console makes it easy to maintain and operate . . . accommodates optional equipment as

needed . . . will broadcast on micro-wave for intra-school networks. For complete details about the Dage ETS-1 write for our free catalog, or request consultation with a Dage representative.

### With the Authors

William F. Roertgen has been assistant professor in German and supervisor of the language laboratory, department of Germanic languages, at UCLA since 1952. He has done literary research in 18th century German literature; textbooks for correspondence study and traveler's German; plus articles on the language laboratory. He is 50 years old and a native of Bottrop, Germany. He has degrees from Drury College, University of Chicago and University of California.

Curtis F. Brown is a teacher and department head in Industrial Arts and also teaches photography and released time classes in A-V. He has appeared on one national DAVI program and two state programs with color slide presentations. He spent more than 1,000 hours of his free time in planning and equipping his instructional materials center.

William O. Nesbitt is supervisor of secondary education in Snyder, Texas and is director of a project designed to improve foreign language instruction in the Snyder schools. With use of the latest in audio equipment, the expanded instruction of the Spanish language in the local schools finds one teacher, for example, able to instruct a class of 42, three times the usual number found in a foreign language class.

Yvon O. Johnson has been audio visual building coordinator in the San Francisco Unified School District for several years. He has many years of experience in the electronics industry has taught at Lux Electronics' laboratory and has published in *Radio & TV News* and *Radio-Electronics*.

**Kodak**  
TRADE MARK

At the new Orchard Hill Elementary School, Leetonia, Ohio, selected by A.A.S.A. for its exhibit of outstanding school designs, George Trombitas, Assistant Principol, soys:

**“We’re a country school with ambitious ideas involving A-V aids...  
We can’t tolerate A-V equipment that requires frequent servicing...  
Our Kodak Pageant Projectors give us no trouble at all...”**

“You don’t have to be a city school to exploit the advantages of audio-visual methods. In fact, we feel our expanding A-V program deserves some credit for our students taking two of the top 10 honor awards in the county—competing with city schools.

“But out here in the country we don’t have the quick repair service for A-V equipment that city schools have. This means we use only equipment we feel will withstand student operation without interrupting breakdowns.”

*One reason* Kodak Pageant 16mm Sound Projectors operate so dependably in city or country is that they are permanently lubricated at the factory. They never need oiling, eliminate problems of over-or-under oiling, *eliminate oil record-keeping, too.* And the Pageant Projector is easy to thread and operate... even for the inexperienced youngster.

Ask your Kodak A-V dealer for a complete Pageant demonstration. Or write for Bulletin V3-22, containing complete specifications. No obligation, of course.

*Kodak Pageant Projector* > **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

"This act by the Ford Foundation turns a smile of withering irony on its own pretensions."

— Uncle Dudley in THE  
BOSTON DAILY GLOBE

# Humanity Halted

If you don't read the Boston newspapers, you may not yet know that one of the most significant film producing projects of our times came to an abrupt halt. Although the twelve pilot films produced by the Council have been praised in the most glowing and superlative terms by all who have seen them, and even though the sponsoring Fund for the Advancement of Education of the Ford Foundation acknowledged the productions as "superb," they withdrew their support from what was one of the most promising projects ever undertaken.

It was a sad story the Boston papers told shortly before school started. Though we've read nothing further about it since, we can't get it out of our minds. The project operated under the unlikely title of Council for a Television Course in the Humanities for Secondary Schools, Inc., but the finished pictures disclose in every frame the high standards and idealism of the Council's imaginative Executive Director, Floyd Rinker, and the thirteen distinguished and cultured members of its Board of Directors.

The twelve films represent the pilot unit, the one on the drama from "a full year course in the Humanities to replace the traditional course in 11th grade English." When the films were first used on educational television stations in St. Louis and Boston last Spring the experiment was lauded by pupils and teachers alike; plans were pushed forward eagerly and enthusiastically for finishing the series. Eighty-four additional films were on the schedule to complete the course. These would cover units on literature, fine arts, music, the dance, etc. Now what?

But first, what happened to halt this project? Obviously there were differences of opinion; obviously the sponsors changed their minds. Actually, one of the Foundation officers, an originator of the Humanities film project, was killed in a plane crash last year. Present officers have different ideas how to make a humanities film and for how much. Reports say that they think the humanities films should be like the science programs on "Continental Classroom," — one teacher talking. The Council believes we have enough teachers talking already. The Council believes that when, for instance, the film professor has a point to emphasize about Elizabethan drama, that he should be able to call upon the finest actors available to help him. That's why the Stratford Shakespearean Players of Canada are in these exceptional films. Eminent professors and professional dramatic artists collaborate to bring vivid and memorable audiovisual experience to the English classroom.

Floyd Rinker, in his "postscript" written as his dream collapsed (or was temporarily interrupted), epitomized the issue as the significance of quality: "Our survival as a nation may depend on the quality of our instruction in the sciences. Our survival and growth as individuals depends upon the excellence of our teaching in the humanities. For the moment, the Council lacks financial support for the quality of production in which it has operated and still believes. Surely the day will dawn when the men who wield the financial sceptre for every foundation which professes to support American education realize that in our schools as in our lives there are more pertinent criteria than quantity, economy, and speed."

Surely those are brave words. We hope that in this great nation there are those with the means *and* the minds to respond.

*Paul C. Reed*

# PUT QUALITY *and* EFFECTIVENESS IN YOUR A-V PROGRAM — GRAFLEX — SVE EQUIPMENT

An investment in good teachers calls for an investment in good equipment for their programs. Don't handicap them—standardize on Graflex—SVE—the equipment chosen for the most effective A-V programs in the country.

School Masters (Model 750 shown with accessory semi-automatic slide changer and rewind take-up) are priced from \$84.50.

## SCHOOL MASTER FILMSTRIP AND SLIDE PROJECTORS

Brilliant projected images make the School Master a real master of larger audiences. So uncomplicated, any pupil can project either filmstrips or 2" x 2" slides while you teach. So conveniently designed that all internal optical elements remove as a unit for cleaning. Exclusive built-in carrying handle permits easy portability. 500 watt and 750 watt manual or remote control models. Exclusive accessory rewind take-up allows filmstrips to be rewound into storage container automatically.

## NEW! INSTRUCTOR 150 FILMSTRIP PROJECTOR WITH EXCLUSIVE PUSH-BUTTON FILM ADVANCE

For smaller audiences, the Instructor 150 is the most compact and economical filmstrip projector on the market! Exclusive push-button film advance mechanism is the smallest, easiest ever devised—any pupil can operate it. Uses latest design 150-watt lamp that has a reflector built in to give high screen brilliance and assure permanent optical alignment. An exclusive lamp ejector makes lamp replacement quick and easy even though lamp is hot. Three inch f/3.5 lens focuses from 19 inches. Rear elevation adjustment centers image on screen. Lightweight, easy to carry.

**\$39.95**

"E-Z" Viewer,  
only \$14.95

## "E-Z" VIEWER

There's nothing as convenient as an "E-Z" Viewer for previewing single-frame filmstrips. It's self-contained, provides 3-times enlargement, is fitted with a folding stand to permit a 45° viewing angle, has positive sprocket advance and is easy to thread. Only 4½" wide, 2¼" high, 5¾" long.

Prices are subject to change without notice.

For additional information on the equipment shown, see your Graflex A-V dealer. Or, write Dept. "ES-119" Graflex, Inc., Rochester 3, N. Y. A subsidiary of General Precision Equipment Corporation.

A

View toward the front of the room with baffles lowered for visual or regular classroom instruction.

**T**EACHING the pronunciation of unfamiliar sounds has been a major task in all language instruction. The most effective method, private instruction by a trained phonetician, with the use of recording and listening devices, is obviously impossible in most of our schools in view of the lack of equipment and the size of beginners classes. Unless the instructor can afford to pay the price of spending considerable time on the phonetics of the language with a great deal of individual attention to the student's personal phonetic problems, the teaching of pronunciation in class is usually limited to the concert or unison method: the instructor pronounces the foreign sounds, the class listens and imitates as a group. The teacher listens to the chorus, and the students in the front row, or those with louder than average voices are the fortunate ones who are heard individually and corrected. The result is the usual mediocre performance so familiar to all language teachers.

In the laboratory method the student listens to the foreign sounds over his earphones while seated in a semisoundproof booth, thus excluding most extraneous noises. He imitates and records the new sounds simultaneously, then replays to himself the master voice, followed by his own imitation. This practice gives the student an opportunity to compare his pronunciation of the new sounds with that of the master. Since his *recorded* voice sounds to the student the same as it does to others, which is not the case in unrecorded speech, he is expected to have a sounder basis for self-criticism and im-

provement when he repeats the sounds a second time.

Testing the laboratory method experimentally in the foreign language class is almost impossible. It would require of all participants an absolute unfamiliarity with the new sounds and it would require of at least half of the testees a thorough familiarity with language laboratory equipment and study methods. Unless the students were to be tested during their first period of language instruction, they would have heard some of the new sounds, and the test would thus not be valid. If on the other hand they were tested during the first contact hour, the lab group would as yet not have mastered the operation of the equipment and would be still unfamiliar with lab practices. Unless several hours of instruction at the beginning of the semester were to be sacrificed to the preliminaries, it would be impossible to carry out the experiment. Furthermore, the number of students participating should be large enough to furnish valid results, yet small enough to permit two voice recordings of each student in one hour *plus* the necessary time for the pronunciation practice. Many students have classes scheduled in the hour following their language instruction, which makes it imperative to limit the testing to the regular 50-minute class period.

To find a way out of this impasse, I chose a second semester German class, six sections in all, with an average lab attendance of only 15. Most of these students had used the lab for approximately 26 weeks, a few who had trans-

# Experiment in Pronunciation

by William F. Roertgen

ferred from other colleges for only 12. Thus all participants were thoroughly familiar with the lab equipment and practices. The comparatively small number in the sections made it possible to carry out the experiment in 50 minutes each. However, instead of testing with German sounds, which all the subjects had heard during their 26 weeks or more of study, the Dutch sound [ei] spelled ei or ij, was substituted. This sound is alien to English, German, French or Spanish, the languages most likely heard or studied by at least some of the students. The first voice recording proved that no subject had any knowledge of Dutch.

In order to avoid variations in the sound of the master voice, which might have resulted from fatigue over a six-hour period, hoarseness, position of the speaker in the room and other physical aspects, the practice material for the experiment was recorded on tape and a dubbing was made of the original. The practice tapes for the experimental and the control group were thus identical, except for the instructions on the critical feature of listening. While the lab method required the students to rewind, listen and compare the recording of the master tape with their own, the concert method group was instructed to listen silently to a replaying of the master voice. It would have been pointless to record and play back to this group the collective responses; furthermore, it would have violated the concert method. No description of the physiological basis of the sound was given to either group. The purpose of the experiment was merely to establish whether the self-evaluation possible in the lab method had a measurable advantage over the concert method in the learning of new sounds.

As each of the six classes appeared in the lab, they were tested at random by one method or the other. The only consideration was to keep the two groups as even in size as possible. Thus a total of 38 students were tested by the lab method, and 49 students were tested by the concert method. The tape for the latter group was played over a 15 inch high fidelity loudspeaker with the sides of the UCLA language booths in a lowered position for regular classroom in-

struction. The tape for the lab group was heard by each student over his earphones while he sat in his booth with sides raised. Thus the true conditions of the classroom and the language laboratory response were reproduced. Each student was given a mimeographed sheet containing the Dutch words:

Wij, wij; zijn, zijn; blij, blij;  
Blijf, blijf; bij, bij; mij, mij;  
Wij zijn blij; wij zijn blij;  
Blijf bij mij; blijf bij mij.

Before beginning the experiment the students received the following instructions by tape: "You will hear a number of short Dutch words containing one sound, [ei] which is alien to English. On the mimeographed sheet you will find six Dutch words containing this sound. I shall pronounce each word *twice*, then you repeat the word *once* in the pause." After the students had listened to one reading of these words over their earphones or the loudspeaker, as the respective method required, and had repeated each word once, they were asked *not* to practice but to come to the soundproof recording booth for a preliminary recording of the six words. To avoid any confusion in the sequence for the purpose of seeking a later comparison of the first and second pronunciation, each participant first identified himself by name before recording. After the preliminary recording enough vacant tape was advanced to provide for the second version before the machine was used by the next student. As the first test required approximately one half minute, or ca. five digits on the selection locator, the tape was advanced another five digits for the second pronunciation. Thus the preliminary tests all started at a decimal, the final recordings at a decimal plus five. The use of the soundproof recording booth prevented the students from hearing the pronunciation of their classmates, correct or incorrect. To prevent exchange of information an instructor supervised the group waiting outside the recording booth. No practicing was permitted.

For each group tested the method used and the initial and final readings on the selection locator were recorded on paper, but neither the method nor the transition from one group to an-

Close-up of student booth with its sides raised for listening and recording. Each booth contains one Ampro hi-fi tape recorder, one microphone, one set of earphones and a selector switch which offers a choice of five different programs.

other was identified in any manner on the tape. Thus when the results were checked two weeks after the experiment, the examiner did not know by which method a student had learned his pronunciation. His judgment therefore could not be influenced by preferences. The identification of the groups and the tabulation of the results were made only when all data had been gathered.

After the first repetition of the sound and the first recording the students returned to their seats or booths. The concert group practiced by listening to the loudspeaker and repeating in unison. The lab group put on their earphones and practiced as described at the outset of this article. Each of the six words was heard twice, then repeated once. This exercise was carried out twice. Then the first three words and the second three words were heard as a sentence, again twice, with a pause for repetition. This was repeated three times. Thereafter the students in the lab group listened to their recording while the concert group listened once again to the master pronunciation, without, however, repeating. The pauses after the master pronunciation were retained, however, so that any student could repeat silently to himself, if he so desired.

After the lab group had listened and compared, and their counterparts had listened silently, the listen-and-repeat practice was done once more, this time *without* another listen period, or listen-and-compare period. Each student then recorded his pronunciation of the sounds once more in the same sequence as before.

The preliminary recording indicated the different degrees of imitative phonetic ability of the subjects. As was expected, some were almost tongue-tied, other attempted to read the words like English syllables, sounding the final letter in *ij* like the English *j* in *journal*, still others substituted what they considered the closest Eng-

lish sounds, [ai] as in *fly* or [ei] as in *ale*. But in each group there were also some who obviously possessed good imitative ability and pronounced the sound correctly from 1 to 5 times. Of a possible total of 228 correct responses in the lab group (38x6), two standard pronunciations were heard during the preliminary recording, whereas the concert group, with a possible total of 294 points (49x6), recorded 32 accurate responses. In the latter group 14 students pronounced the sound [ei] correctly in from 1 to 5 words, in the former group only two testees in one word each. The first recording thus revealed that the chorus group in comparison to the lab group had seven times more students with apparent phonetic capacity of various degrees and 16 times more correct responses.

The next step was to determine by which method pronunciation could be taught more effectively. Knowing the number of students with *apparent* phonetic capacity in each group and the mean of their correct responses (2 and 1 for the lab group, 14 and 2.28 for the concert group), the experiment's portent was to establish the rate of improvement by comparing the final results with the preliminary tests. By subtracting the initial score of accurate responses from the final one, the percentage of improvement for each group could be ascertained.

The final score of the concert group was 49, or an improvement of 53.1%. The number of students with from 1 to 6 correct responses increased from 14 to 16, or 14.2%. This compared with 22 accurate responses for the lab group, or 1000% improvement, and an increase from 2 to 10 students, or 400%, with from 1 to 5 correct responses. The mean factor of learning for each student was 0.52 in the lab group and 0.34 in the concert sections. Five of the 14 students in the concert group had either completely or partially *unlearned* their initial correct responses compared to two in the lab group. Yet despite the obviously smaller linguistic capacity of the latter, their pronunciation revealed both in actual numbers of correct responses and percentage-wise a considerably greater gain than that of the concert group. Of the 17 additional points collected by the concert group, nine were added by those scoring in the first recording, while seven points were lost by 5 original scorers. The other 15 points were gained by six new members. In the lab group 22 points were added by 10 new scorers, but the two original scorers lost their two points. If we disregard those who scored both times, we find that in the concert group out of 39 students 6 persons learned to pronounce the Dutch sound with a total score of 15 points,

while in the lab group 10 out of a total of 38 students received a score of 22 points. Accordingly the pure mechanics of the lab method seem to be 50% more effective in teaching pronunciation than those of the concert method. The number of correct responses per learner was almost like, i.e., 2.2 for the former and 2.5 for the latter.

The fact that 5 of the original scorers in the concert group lost their points compared to two in the lab group points out the major drawback of the method, namely the effect of mispronunciation by the linguistically less capable on their more fortunate classmates. Two of the five original scorers had received 2 points each; they lost both. The other three lost one point a piece. One of these, however, had had an original score of 4 (1).

The percentages obtained in this experiment cannot be considered final in an appraisal of the two methods. For a final appraisal a greater number of students must be tested. But the consistently greater level of improvement by the lab method may be ascribed in part to the lack of interference from mispronunciation which is almost a natural concomitant of the concert method. Students with greater auditory perceptibility and imitative phonetic ability are obviously impeded in their learning by the pejorative effect of the majority's mispronunciation.

While the lab method is evidently superior to the concert method, the experiment also proved that a sizable group of students, in our case almost 30%, could learn new sounds, after a very limited practice, without an explanation of their physiological basis, by simple imitation. Since pronunciation is a skill, it must be practiced by imitation until the new sounds have been mastered. Can this be achieved in the classroom only? Very inefficiently. The individual is affected by his neighbor's attempts, the capable student unlearns his initially correct pronunciation, and the few who have already mastered the new sounds become bored. The classroom is definitely not the place to practice pronunciation, just as little as a general rehearsal on the concert stage will perfect the musician who fails to practice systematically in private. Practice at home? How can anyone be expected to reproduce a new sound correctly when no source for imitation is available? The music student has his instruments, the science student his slide rule, microscope, drafting board, compass, etc., and even the physical education major his equip-

ment. Is the language student then to practice his skill without any tools? This situation was defensible only as long as no inexpensive sound recording and reproducing equipment was obtainable. Language teaching, however, has arrived at a point where students can acquire an inexpensive aid. Most students, whether at home or away from home, possess a radio. Those who live at home generally have multiple-speed record players at their disposal, some even have tape recorders. While the practice of pronunciation is most successful under supervision in a language laboratory, the second best choice is the privacy of one's room with a source of sound for imitation. The school without a language laboratory should require each beginning student to acquire at least one pronunciation record for practice purposes at home. There are at present inexpensive 45 RPM language records on the market, and it can scarcely be considered a hardship to request students to purchase one of these. Since nearly all students who live at home enjoy the use of a multiple-speed record player, the few who do not, might be expected to rent or purchase one. A 45 RPM record player, e.g., has sufficient fidelity and playing time to be very useful in language work. It is light and small enough to be transported easily. Furthermore, it is low enough in price to permit every student to own one, new or used, if he really wants to. Then in the privacy of his room, the student can learn to pronounce the new sounds without the hazards of unison interference. The teacher can then check the student's efforts in the classroom or in his office and provide correction and guidance. Thus it will be possible to put the practice of pronunciation where it belongs, into the study period at home. The advantages gained from good pronunciation will readily be translated into better reading, greater oral fluency and a sense of accomplishment by the student. If the material on the records is well chosen, their use will create the atmosphere of a living language with its beneficial effects. By auditory perception and oral practice foreign sounds and phrases will be learned, and the never-tiring mechanism will urge the student on, at the same time furnishing him a measure of his accomplishments. Thus the language student should be able to acquire a creditable pronunciation with the use of records for practice at home and the aid and supervision of his teacher in school, without the use of an elaborate language laboratory and with an avoidance of the pitfalls of the concert method.

	Experiment	Control

Testing of audio equipment. Frequency response test is described below.

by Yvon O. Johnson

## True Audio Reproduction

**T**HE nationwide interest in modern foreign language laboratories places increased emphasis on the audio portion of the role of the audio-visual coordinator. New demands are made on equipment; in turn, new demands are made on the coordinator.

As an audio-visual coordinator, you must not only be an expert in the content of films and the quality of viewing equipment, but now you must

become familiar with the characteristics of audio equipment. You may be asked to recommend equipment which will meet specific needs. You may have to determine why other equipment falls short of the role it was intended to fill.

All audio equipment likely to be used in schools and churches attempts to reproduce the music or speech that constitutes the program source. The word "reproduce" can be qualified by either "faithfully" or "adequately."

Faithful reproduction can be said to occur if a blindfolded person were exposed alternately to a live source of sound and to a reproduction of the same sound and could not differentiate between them. He would be hearing the audio frequencies exactly the same in each case and without any change or distortion being introduced by the audio equipment during its performance.

As you know, the audible range of frequencies is often given as 16 cycles per second to 20,000 cycles per second. Many people do not fit these limits; their hearing, especially at the upper limit, is somewhat short or somewhat beyond.

Human speech occupies only a portion of this spectrum, however. It covers roughly 100 to 8,000 cycles per second. It is not necessary to reproduce all of the speech range for intelligibility for certain purposes. A telephone circuit can do an adequate job with a frequency range of only 300 to 3,300 cycles per second.

Also, a portable announcing system may eliminate the low speech frequencies, as these frequencies are not essential to this type of communication. The power that would have been used for the eliminated low frequencies is used for the frequencies that are transmitted. Thus the result is increased power output through the elimination of unnecessary frequencies.

Unfortunately, restriction of the frequency range is not the best course for all applications. To understand this it is necessary to recall that notes of musical instruments and sounds in speech are quite complex. Each note or sound consists not only of a fundamental frequency but also of harmonics. Harmonics, or overtones, are integral multiples of their particular fundamental frequency. The number and relative amplitude of harmonics give each musical instrument its distinctive character even though it is sounding the same note as another instrument.

Since a sound is composed of a fundamental frequency and its harmonics, equipment must be capable of reproducing the harmonics as well as the fundamental frequency if you need complete fidelity of reproduction for your purpose.

Language laboratory work makes such a demand. An adequacy sufficient only for communication in the native tongue of the listener is not enough. To teach a new language to a student by the aural-oral method it is necessary for the teacher to produce and for the student to hear the sounds of all the vowels, diphthongs, and consonants. This process automatically occurs in a live teacher-student performance without the use of electronic equipment. If electronic equipment is used, the sounds must be reproduced faithfully or the student will be given altered and untrue sounds. The student is then placed in the position of having to imitate an incorrect sound.

Sounds heard by the student should evoke the proper control of the column of air by the larynx, tongue, oral muscles, teeth, and lips. This is essentially an imitative process but it is rendered more difficult when the student cannot see the sound being produced by the teacher but must visualize it from the evidence presented to him by the audio equipment. The sound must be complete and accurate in order to aid the student in the imitation of the proper control of the air column.

These language laboratory requirements necessitate faithful reproduction of at least the speech range of 100 to 8,000 cycles per second and possibly beyond 8,000 cycles to the upper hearing limit. It will be interesting to watch developments in this field to see what standards will be set. You, as an evaluator and purchaser of audio equipment, are an important factor in helping to determine those standards.

The evaluation of audio equipment by a blindfolded person as mentioned before is unfortunately too subjective. Fortunately, there are certain objective electronic tests that can be performed on audio equipment.

One of the most important tests is that of *frequency response*: how well does the system reproduce all frequencies presented to it without undesirably accentuating some frequencies or attenuating others. Some units of an overall system may purposely boost or drop certain frequencies in order to equalize an unavoidably poor response of another unit in the system.

Frequency response is best shown graphically. If you examine a frequency-response curve (see graph) you will see that the chart has frequency plotted on the logarithmically-ruled horizontal scale; the response of the equipment is read on the arithmetically-ruled vertical scale. Frequency is expressed in cycles per second; response is in decibels.

A decibel (db.) is not a unit of absolute measurement but is a relative unit. It is used in this application to logarithmically express the ratio between the output level at any given frequency to the output level at the reference frequency.

Decibels are useful for this purpose as the human ear responds to a change in power on a logarithmic basis. The intensity level must change one or two decibels before the change is apparent to the average person.

A frequency-response curve is plotted by feeding in a signal to the system or unit under test at a reference frequency (400 or usually 1000 c.p.s.) and calling the resultant output *zero db.* on the chart. Other frequencies are fed in at the same input intensity and the resultant output levels are expressed as decibels and marked on the chart. Connecting the points with a line will result in a frequency-response curve.

A manufacturer may not display the frequency response on a graph but may state it numerically; e.g., "20 to 20,000 c.p.s." This is not of much use to you as you do not know the relative intensity throughout that range. Somewhat better is the practice of stating, say, "plus or minus two db. from 20 to 20,000 c.p.s." This last procedure is still not as revealing as a frequency-response curve.

By making a habit of studying any frequency-response curve you encounter, you will become more familiar with them and their uses.

While you will probably use frequency response as the first criterion, you must also use other measurements in evaluating audio equipment. However, unless you find that the desired frequency range is covered, you usually will not consider further.

# Big Classes in Texas

by William O. Nesbitt

*THE Snyder project is an organized, creative search for new ways of increasing the quantity of learning and the quality of teaching in the secondary school. It proposes to test the hypothesis that teaching the same students in large groups (70-100) part of the time and in small groups (12-15) and individually the remainder of the time is more economical of both money and teacher time and more productive educationally than the methods usually associated with teaching classes of 25 or 30. Use is being made of closed-circuit TV, radio, tape recorders, and overviews with teacher-made visuals.*

*Although the project deals with new approaches to teaching and learning, the subject matter involved is not experimental. Teachers of identical subjects have been scheduled to meet classes at the same periods so they can work as teams in planning and teaching. Each teacher has the usual teaching load; however provision has been made for clerical assistance, special aids, and intensive supervision. The experiment is operating within a traditional framework.*

ONE is to be cautioned against hoping to achieve comparable results in any isolated aspect of this project without supplying all the criteria that went into the making of its success. For example, it would be foolish to think that a teacher-team could produce as much professional planning and materials without the necessary clerical assistance, material aids, team planning time as provided by proper scheduling, and close supervision and encouragement. Also, it would be unusual for a group of teachers to maintain the extremely high level of morale and interest found among teachers in the Snyder project without providing for the removal of the deadening and energy-consuming non-professional activities traditionally assigned to teachers. Likewise, it is useless to hope that increased numbers of students can be assigned to a teacher without harming the instructional program unless all the factors that permit such an increase are present.

The teacher-team idea as applied in the Snyder Project involves three teams of two teachers each—general science, biology, and eighth grade English (grammar, reading, and spelling). Combined with ten hours of clerical assistance per week per teacher and with a schedule that permits assembling students in large or small classes, this idea has a number of advantages over having each teacher work in isolation:

1. Each teacher is enabled to specialize on the part of the content which he knows and teaches best. The two teachers are scheduled at the same period so that when the portion of content that one of them handles best is being treated, he can take both classes. Thus, the pupils profit from more superior teaching under this plan of specialization.

2. During a given week each teacher's daily load in terms of classroom hours is reduced by the number of times the other member of the team meets with both classes in a large group session. This occurs about twice a week, and this time added to the regular team planning time provided in the daily schedule gives the relieved member of the teacher-team opportunity to prepare more carefully for his own presentations. It would be difficult to over-emphasize the importance of this, because during a crowded week many teachers simply do not have time to prepare their daily presentations adequately even though they may have taught a number of years.

3. The regularly scheduled open time each day at the same hour for the two members of the team enables them to work together, enriching each other's ideas and combining the materials developed by both to the profit of the class. The one-to-one relationship that develops between the two teachers makes pre-planning a pleasant necessity that leads them into extra hours of productive work. Teaching can be a lonely business, but when just one other person shares your enthusiasm and purpose it becomes the thrilling business it ought to be.

4. By providing large classes once or twice a week at the desire of the teacher-team, the plan enables all pupils to get the basic essentials, which can be given to large groups. The large group sessions are followed by small groups and individual concentration, as well as by meetings of groups of the ordinary size. This provides the teacher with the long-denied opportunity to fulfill the responsibility of meeting individual differences among students, due to a flexible and dynamic grouping of students. Teachers think in terms of "our students" rather than "my class."

5. When one young teacher is placed with an experienced teacher on the same team, he experiences unusual professional growth during the first year rather than being forced to fumble around at the outset however well he might have been trained in college. Conversely, new teachers frequently have new data and ideas welcomed by the more experienced team member. Team-teaching deserves much consideration as

A typical large-class session in Snyder, Texas. Closed circuit TV, rear-projection equipment, a magnetic board and a large tilted viewing screen have been arranged in a panel located three feet from the front wall.

A Snyder teacher uses 10 minutes of television to show tiny details of a microscope to students in several laboratories.

After the 10 minutes of TV, the teacher then returns to one of the labs to work with students as they learn about the microscope.

a technique for in-service growth of teachers both experienced and inexperienced.

6. The morale that is generated in each team, and the professional enthusiasm that comes along with it, is considerably higher than that one ordinarily observes in the typical classroom or in talking with teachers who are not on teams.

7. Teacher-teams encourage the solution of problems due to cooperative effort.

8. It should be said that some people just do not want to work in teams with others. They have their own personal reasons for this, and those reasons should be honored.

One of the most significant features of the Snyder Project is the use of clerical and secretarial aides to relieve teachers of many sub-professional activities. These aides come from the ranks of housewives who can use a typewriter and perform the usual routine office-type work. They have proved to be very competent, and, like the teachers in the project, they have developed a high level of interest in the progress of the project.

The use of teacher aides saves tax money. A simple problem in arithmetic makes this point clear:

a. Ordinarily, a teacher meets about 125 pupils in her five classes per day.

b. With ten hours of clerical help per week, each teacher can take care of five more pupils per class, or twenty-five per day, with the same

or even less effort.

c. One clerical aide on a forty-hour week can serve four teachers, thus enabling the four teachers to take care of 100 more pupils per day.

d. The 100 additional pupils cared for by the four teachers make  $\frac{4}{5}$  of the 125 pupils met daily by teachers in the ordinary classroom. This means a saving of an amount equal to  $\frac{4}{5}$  of one teacher's salary.

e. If the average salary is \$4,500 a year, this means a saving of \$3,600.

f. Clerical aides are paid \$1,800 in Snyder, or  $\frac{1}{2}$  of the \$3,600. Thus, the remaining \$1,800 is saved by providing one full-time secretary for four teachers at 10 hours per week per teacher.

Any Board of Education interested in saving tax money should give careful consideration to providing clerical aides to all teachers who desire to use them on this basis. Since each teacher requires only ten hours of assistance per week, the supply of persons from which to choose aides is greatly increased without loss of efficiency. A great number of housewives want to work only ten hours per week, and this allows all of her time to be consumed by one teacher.

Whether or not a clerical aide is used should be the choice of the teacher. Many teachers prefer to do all the tasks that are customarily necessary rather than being relieved of the clerical work involved in many of them.

Modern communication devices coupled with

proper scheduling and assistance enable teacher-teams to teach agreed-upon material to larger than usual classes in a most effective manner. When teacher time and initial cost are considered, however, the latest audiovisual aids are more adaptable to large group instruction at this stage. This is not to say that the only thing a teacher of the usual size class needs is a blackboard and a piece of chalk. On the contrary, even though the following comments and observations deal largely with the place of television, the overhead projector, and the tape recorder in large group instruction, the implication is that the teacher of the usual size class can also make excellent use of them—and at a reasonable cost.

1. The TV camera projects small objects and microscopic materials magnified many times to any size group so that each student sees in large scale precisely what he is supposed to see, and, therefore, often understands it better than when an individual microscope is used.

2. Fundamental material is presented to large groups more vividly than it is usually presented in small groups in the ordinary classroom.

3. There is no problem of discipline in the large classes since there is a much higher degree of student interest than is generally found in classrooms.

4. Teachers conserve energy while improving instruction when modern communication devices as well as the conditions enhancing their use are present.

5. Drill becomes more intense and absorbing because the mnemonic devices are ingenious, imaginative, and effective.

6. The overhead projector allows for time-saving, effective, graphic presentation in such a way that any desired degree of contact between students and teacher can still be maintained.

7. The overhead projector enables the teacher to face the class while presenting material that has formerly been presented on the blackboard with much less effectiveness.

8. Students seem to feel the need for paying closer attention when electronic and mechanical aids are used.

9. Lesson plans have taken a new look in Snyder. Teacher-teams have turned to a pocket chart for organization and to a series of slides of their own design for the overhead projector for presenting basic materials. The chart contains thirty-six pockets separated into the four nine-week periods of the school year. Each pocket holds cards with notations about lessons planned by the teacher-team for each week. Colored slips suggest grouping arrangements, teaching techniques, instructional materials, and evaluative devices.

10. The overhead projector allows the teacher to develop a whole series of ideas in the form of slides and overlays. Thus, the basic idea is on the first slide, the second can be added by flipping on an overlay, the third by a similar process, and so on. The sequence can then be reviewed immediately.

More than 500 slides have been created and prepared in one year. Many of these show great creativity and artistry on the part of those who made them.

11. The use of color in the material projected by the over-viewer is of significant value.

12. Evaluation of learning is done efficiently and effectively with the aid of modern material of learning.

13. What has been said about the closed-circuit TV and the overhead projector applies equally well to the tape-recorder. The recorder as well as the overview machine, has been used with considerable skill in the Spanish classes in Snyder. The more proficient students use tape recordings which the teacher has developed and the less proficient receive special drill and personal attention by the teacher during the same period.

14. The statistical results in all classes that have used one or more of these instruments show in all cases that the pupils are learning as much as they formerly did, and in many cases the results show superior learning to that which formerly prevailed.

The completed statistical analysis for 1957-58 indicates that (within limits) the amount of learning as measured by standardized tests that takes place in a classroom is not affected by the number of students present. Our study dealt with groups of 20 to 90 meeting every day in the school week. After paying clerical aides this amounted to a saving of \$11,417.00 in salaries last year.

Equipment purchased for the experiment has a life of 7 to 10 years; however, if we wished to continue operating as we did last year it could be amortized over a 3 year period without showing a financial loss in any one year.

In addition, if we were interested only in saving money, we could eliminate the control groups, forget about substitute teacher salaries, involve a large percentage of teachers in the system, and effect a saving far in excess of \$11,417.00. However, this approach is too shortsighted to be recommended by Staff Utilization personnel.

The professional teacher looks at more than the cost of instruction in terms of money. We learned last year that there were some things we could do better in large groups than in small ones. There are other things which require regrouping of students.

Moreover, tentative figures in the 1958-59 experimental project indicate that if teachers were willing to accept three or four additional students in each of their classrooms they could be supplied 10 hours of clerical assistance per week at no additional cost. This, mind you, is true even with the set-up that now exists in Snyder High School.

Thus, if cost is the *only* consideration, then the pathway opened by the Snyder Staff Utilization Project is one way to operate a school system as well as it has been operated in the past and at the same time reduce instructional costs. Other techniques (such as, cutting out needed instructional supplies, adding more students to classrooms without providing the accompanying plan to guard against the loss of instructional efficiency, and simply trying to "hold the line" without proper help being provided to teachers) are bound to fail in the face of increased costs of material and people and the anticipated increase in enrollment.

# Your Own A-V Center

by Curtis F. Brown

**P**ERHAPS all A-V building coordinators appreciate the value and importance of an instructional materials center. But unfortunately many administrators have to be *shown* the value and need before they make funds available.

More and more people in key positions are becoming convinced that next in importance to adequate classroom facilities for audiovisual instruction is an instructional materials center for each individual school. It is my firm belief that any movement to establish a center in a school building must be worked upward through the line of authority from the teacher and coordinator to the superintendent and school board. And in the final push, the teachers themselves must make their needs and wishes known. The louder and more often they do this, the better.

The business of starting a center in the architect's plans of new buildings is much simpler than finding space and preparing it for use in an existing building. At the Benjamin Bosse High School in Evansville, Indiana, a school of 1,900 students and 75 teachers, the selling program started exactly three years before the center was completed. As soon as the coordinator had convinced the principal that a center was necessary and useful, the search for space began.

It was decided that a trial center should be set up in one corner of the coordinator's industrial arts classroom. By compacting benches and machines, an area approximately fifteen feet square was made available. Then started an accumulation of donated discarded school furniture and equipment. This was rebuilt and nicely refinished in the school shop. The principal and the school's business manager were very cooperative from the start as well as the superintendent. Little by little a stock of materials from speed ball pens to cameras was added. The floor in this area was painted, a preview screen hung and the windows blackened. A chain with a snap on it kept curious shop boys from meddling with equipment. Several students and teachers were instructed in the use of the dry mounting machine and in the making of posters and copy work with cameras. By much hard work, with weekends thrown in, the place was ready for the annual AV Faculty Meeting.

The author usually has charge of one faculty meeting each year to acquaint teachers with new films, projectors and the like. The school

had been fairly well supplied with this type of aid for several years.

But this faculty meeting was different. First, Altha J. Sullivan from the State Department of Public Instruction accepted an invitation to come and speak. She was well supported by Dr. Carolyn Guss from Indiana University, who told of the original work we were doing.

With these prominent speakers on the program and with a promise of refreshments and a tour of the makeshift center, it was easy to get many other visitors. The superintendent and most of his staff attended, principals and coordinators from other high schools also came.

Teachers were handed duplicated copies telling of the materials and services furnished free in this area. A fair percentage started using the facilities immediately. It was *their* cry for more space, away from the noise and dust of the woodshop that helped move things along. All the time during the entire year the principal and coordinator were searching and planning for a new room.

Near the end of the year it had been decided to build a new cafeteria large enough to accommodate the growing student body. The main dining room of the old cafeteria was divided into three classrooms—only one of which had windows and two of them with only a single exit. That left the kitchen, which was a long slim room, and that is now the Instructional Materials Center.

Physical facilities of this room, which measures 15 by 60 feet (900 square feet) include acoustical tile ceiling, fluorescent lighting, terrazzo floor, twelve electrical receptacles, an exhaust fan, a 9 by 14 foot dark room with light trap, two bulletin boards, and a 4 by 8 foot peg board.

As the workmen prepared this room, the administration became more enthusiastic and soon they were adding facilities that the coordinator did not have the nerve to include. In particular, the acoustical tile ceiling and the long bright rows of fluorescent lights, and the solid oak counter with formica top made the room one of the show places of the entire building. Much of the new furniture, including a large magazine rack and a formica-topped storage cabinet, was constructed by the author.

It has been my observation that it is easier to get good equipment in a well-kept building,

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## Moving Things On Land

(Churchill-Wexler Film Productions, 801 North Seward Street, Los Angeles 38, California). Produced by Churchill-Wexler, 11 minutes, 16mm, sound, color or black and white, 1959. \$100 or \$50. Correlated with the text series, HEATH ELEMENTARY SCIENCE, by Herman and Nina Schneider.

### Description

MOVING THINGS ON LAND shows, in an amusing but informative manner, what friction is, what the world would be like without friction, and some of the techniques man has devised to help reduce friction in moving things.

The film opens with Jim and Bobby trying to move a large wooden box of comic books to Bobby's home. Friction, however, is giving them trouble. Of course, the boys wish that there was no friction; but an imaginary sequence shows what the world would be like in the absence of friction.

The factors that cause friction are shown in the next scenes. A closeup view of the pavement is pictured so that the many irregularities can be seen. The box itself is covered with irregularities — splinters, etc. Friction then is the tendency of these irregularities to prevent the two surfaces from sliding over one another. This drag or friction must be overcome before an object can be moved.

In order to reduce the area of contact, the box is provided with runners. Here and throughout the film, new ways of reducing friction are introduced by pop-on and stop-motion photography. The use of runners results in less friction, and the box is moved more easily. To further reduce drag, the surface of the pavement is covered with soap powder. With the pavement made smoother, the runners move more easily.

The boys are next furnished with rollers. These serve to further reduce the friction and the box moves with less effort. However, the rollers must be constantly picked up at the back and placed in front of the box. Several practical applications of rollers to moving things are shown. It is pointed out that this method of lessening friction is usually applicable only when short distances are involved.

Next, the boys are given wooden

wheels and wooden axles. Here the friction is even less. The greatest amount of friction now is between the axle and the wheel. When metal wheels and axles are supplied, the boys find that the amount of friction is still further reduced. The narrator points out that this is due to the fact that the metal is harder than the wood and can be made smoother. However, even between these wheels and axles there are some irregularities which cause friction. Oil is applied to fill these irregularities and the amount of friction is again decreased.

At this time the narrator indicates that perhaps the boys should be allowed to go on their way. However, he points out, there is still a better way to move things on land. This time the boys are provided with roller bearing wheels. The film explains that almost everything which must turn extremely well turns on well-oiled roller or ball bearings.

Now that the boys are using the most friction-less way of moving their box of comics, they are on their way. Bobby needs friction between his feet and the sidewalk to push the wagon to get it started, and Jim has a brake by which he can apply friction to stop it if necessary.

The film ends with Bobby's mother refusing to let the comics be brought into the house. "And after all we've done for them!" says the narrator.

### Appraisal

The teacher in the elementary and junior high school science classes will find the film very useful in explaining what causes friction and in suggesting ways that friction can be overcome or reduced. The film should also serve as a basis for tracing the growth of transportation as better methods were developed for overcoming friction. Children will find the film not only informative but very amusing, as trick photography is used in many instances to help illustrate points and to keep the film moving at a lively pace.

—Donald Nicholas

## Hawaii — The Fiftieth State

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette,

Illinois) Produced by Encyclopaedia Britannica Films, 17 minutes, 16 mm, sound, color or black and white, 1959. Teachers' guide available. \$180 and \$90.

### Description

*Hawaii—The Fiftieth State* introduces the Islands and what they have to offer as the newest state of the Union. It traces the Islands' origin, surveys their physical geography and natural resources, introduces the people, and gives an overview of the major industries.

The film opens with a wide shot of sea and sky while the narrator explains that, "In the beginning there was only the sea . . . the vast blue of the Pacific." Suddenly the peaceful scene is disturbed by a volcanic eruption. "And then," the narration goes on, "the floor of the ocean cracked open. . . . Spurting from this deep crack for millions of years, rock piled upon rock until one day the first peak of land rose above the sea."

Thus is the birth of the Hawaiian Islands. Continuing the story of the creation of these spectacular land forms, the film shows the still active volcanoes of Hawaii and the huge silent craters of Maui. It pictures the Polynesians sailing across the sea to become the Islands' first inhabitants. A series of scenes depict these people living in their "island paradise" for seven thousand years until their discovery by Captain Cook in 1778.

In Honolulu on Oahu, the ships in the harbor and the busy airport attest to the fact that the city is the center of transportation and commerce on the whole Pacific area. A succession of short scenes shows the infinite variety of combinations of the various races living so harmoniously together in a land of magnificent vistas and near perfect climate. Though pure Polynesians or Hawaiians now account for only 17 per cent of the population, the traditions and culture of old Hawaii are preserved in the hula, the luau, the statues, and the Iolani palace.

The film points out the vital roles that sugar and pineapple play in the Hawaiian economy. On the plantations, the modern methods and machinery used in planting, cultivating, harvesting, processing, and shipping

of the products are seen. Tourism, the Islands' third largest industry, is a most rapidly expanding activity. The Marine Corps, Air Force, Army and Navy in Hawaii are an important part of the economy. The film calls attention to the importance of the armed forces as the first line of defense for America's west coast.

The film ends by showing short scenes of Waikiki, the University of Hawaii, sugar cane harvesting, sailors on gun, and the blow hole, while the narrator states, "With all its beauty, brilliant mosaic of cultures, thriving industries, and military importance, Hawaii offers much to all America as the fiftieth state of the Union."

#### Appraisal

Designed to correlate with all units of study in social studies, geography, and problems of democracy, this interesting film should have wide audience appeal for the elementary grades through the adult level. It does an admirable job of explaining the racial origins and volcanic sources of the Islands. Introduction of the people and their composite culture and the pres-

entation of the Islands' beauty spots are accomplished without the film's sounding like a travelogue. Continuity and narration remain smooth in spite of the wide variety of information presented. The evaluating committee, however, objected to the statement about Hawaii's becoming a U. S. territory at "its own request."

—*Herminia M. Barcelona*

### Principles of the Transistor

(McGraw-Hill, 330 West 42nd Street, New York 36, New York) 22 minutes, 16mm, sound, black and white, 1957. Produced by McGraw-Hill. \$120.

#### Description

*Principles of the Transistor* uses animation and demonstration to illustrate the history, principles, and contributions of semi-conductors in modern electronic equipment. A detailed explanation is presented of semi-conductor theory and of the "p and n types" of germanium. Throughout the film the advantages of transistors over con-

ventional thermionic tubes (the film uses the English term "valves") are pointed out.

Semi-conductors are shown as first employed in crystal receiving sets which used the mineral galena and a wire "cats-whisker" to detect radio signals. At the time there was little understanding of the theory of these receivers and they were soon replaced by radios with thermionic tubes. The number of tubes required in various electronic instruments is illustrated and the range includes from only twenty in a television set to over five thousand in some computers.

Radar is credited with stimulating semi-conductor research since its high frequencies were beyond the effective range of tubes. Crystal diodes were developed for radar and further research led to the discovery in 1948 of the theory on which the transistor is based.

The film uses animation to explain how electrons move within conductors, such as copper, and contrasts this with the inability of non-conductors' electrons, in this case porcelain, to move about freely from atom to atom even

"A prism derives its name from the shape of its base."

Junior High — High School

## DISCOVERING SOLIDS

A series of three films applying mathematics principles to space perception.

- I VOLUMES OF CUBES, PRISMS, AND CYLINDERS
- II VOLUMES OF PYRAMIDS, CONES, AND SPHERES
- III SURFACE AREAS OF SOLIDS

Art, animation, and model demonstrations help develop formulas for finding volumes and areas of solids. Live footage shows the use of these formulas in practical situations.

Carefully produced under the supervision of Dr. E. H. C. Hildebrandt of Northwestern University's Department of Mathematics, these films meet the demands of the revitalized mathematics curriculum.

## RUSSIAN LIFE TODAY INSIDE THE SOVIET UNION

The modern story of people behind the  
iron curtain — how they earn their livings,  
their daily activities, recreation. Presents  
a revealing and objective study of the  
average Russian and his place in  
a communistic society.

This authoritative account was photographed  
by Fredric Christian and Russ Potter.

Bailey Films edited more than 10,000 feet  
of uncensored color film to bring you  
this rare documentary study of Russia today.  
For junior-senior high school, college  
and adult uses.

21 MINUTES. COLOR \$195,

when placed in an electric field.

Using demonstrations and animation, the film shows germanium to be tetravalent with a strong crystal lattice between atoms and a poor conductor of electricity at room temperature. When a piece of germanium connected in a circuit with a light bulb is heated red-hot the bulb lights. At this temperature, through animation, electrons are shown to have been loosened from their atoms by thermal energy and are free to move about in the solid. Narration points out that this is not an effective way of controlling electron flow in germanium and other semi-conductors.

If the impurity antimony with five valence electrons is added to the germanium, a single electron is left over to move freely about the solid and produces "in type" germanium since the freely moving particle carries a negative charge. When indium is added to pure germanium, only three of germanium's four bonds are used leaving a place for another electron or a "positive hole." This "hole" acts as a positive carrier and the germanium known as "p type." Animation pictures the bonding and electric current flow in both forms of germanium. A demonstration illustrates that current will flow in either direction through each type of germanium.

Next, an animated sequence pictures the neutral condition found in germanium until they are brought into contact. The migration of positive and negative carriers of electricity from one type to the opposite type of germanium leaves a positive charge in the "n type" and a negative charge on the "p type." Using this combination of "p-n types," a rectifier is produced that will pass current only when the negative electrode is connected to the "n type" side. This "p-n junction" is known as a germanium diode. Following the animation a demonstration of current rectification and close-ups of several diodes are shown.

The operation of the "p-n-p transistor" is described in animation by showing the charge on each of the segments; the predominance of positive carriers over negative carriers; the roles of the emitter, base, and collector; and the manner in which a small current's variation in the emitter-base circuit will produce variation in a large current in the base-collector circuit. This principle is demonstrated in a simple circuit employing a transistor and through close-ups which call attention to the changes in the milliamperemeters' readings. Examples of transistors used in small electronic devices and the larger power transistors are shown.

In closing, the film points to the specific advantages of transistors. Their compactness and lightness makes it possible to reduce the size of equipment. The low power supply is significant in portable radios and hearing aids. In electronic computers transistors not only make miniaturization possible but eliminate the complex cooling problems associated with use of thermionic tubes.

### Appraisal

*Principles of the Transistor* basic strength is in the excellent visualization of current conduction in semi-conductors. The animation makes the operation of "p and n types" of germanium and the "p-n junction" easy to understand. The sequence on the "p-n-p transistor" being more complex may need to be seen more than once to be well understood by the student. The previewers felt that the use of the English term "valve" instead of our term "tube" would present little difficulty to students studying electronics. Reinforcement is provided by live demonstrations that follow each animated sequence. The pacing and level of the content presupposes that viewers will be of senior high age or older and have a basic understanding of electronic principles.

—Richard Gilkey

## The Emperor's New Clothes

(A Progress Film production, designed and directed by Herbert K. Schultz. Distributed by Brandon Films, Inc., 200 West 57th Street, New York 19, N.Y.) 12 minutes, 16mm, sound, color, 1958. Color, \$135; black and white, \$55.

### Description

Using puppets as actors, the film tells the Hans Christian Andersen story of a vain emperor and Snipper, the Master Tailor.

One morning the Emperor, dressed in his latest finery, walks in the courtyard and dances to music by his courtiers, Anatole and Francois. Through the open courtyard gate, Snipper observes the Emperor and makes a number of uncomplimentary remarks about the Emperor's fine new clothes. Enraged, the Emperor withdraws to his living quarters. Snipper forces his way into the Emperor's rooms and professes to be a master weaver and tailor. He promises the Emperor a suit made of extraordinarily beautiful and special cloth. This special cloth, according

o Snipper, only can be seen by persons who are worthy and deserving of their position and station in life. The Emperor employs Snipper as his master tailor and dispatches Anatole and Francois to Snipper's shop with spools of beautifully colored thread. Snipper gives the thread to three of his friends for disposal and pretends he is threading the loom and weaving the cloth.

This pretense continues as Anatole and Francois visit the shop the next morning to check Snipper's progress. Of course, neither of them see any cloth on the loom nor thread in the shuttle, but, fearful lest their inability to see the cloth would denote their unworthiness as courtiers, they pretend with Snipper that the cloth is truly beautiful and magnificent. Throughout the weaving, cutting, fitting, and sewing, the two courtiers and Snipper continue the pretense.

When Snipper completes the tailoring, he delivers the imagined suit to the Emperor. The Emperor, too, sees no cloth or suit, but neither can he admit to seeing nothing lest he be judged unfit as an emperor. So, he pretends he sees the cloth and praises its elegance, and, for his fine workmanship, Snipper is given the Royal

Order of the Pincushion—First Class.

News of Snipper and his extraordinary cloth spreads throughout the town, so the townspeople line the street to see the Emperor and his new clothes. When the Emperor descends from the royal coach, the people applaud and praise the beauty of the new clothes because they, too, cannot admit their inability to see the cloth. Finally, a child begins to laugh and exclaims, "But he's only wearing his underwear!" The child's admission awakens the townspeople to their false pretenses and they begin laughing and shouting, "He's only wearing his underwear!" Realizing that his vanity has led to his being duped by Snipper, the Emperor quickly gets into the royal coach and draws the curtains. As the coach pulls away, Snipper and his three friends view the scene with amused smiles.

The film closes with the narrator commenting to the effect that through this experience the Emperor learned of the foolishness of vanity and arrogance.

#### Appraisal

This film tells in a delightful and realistic manner the Hans Christian

Andersen tale of the Emperor and his new suit of clothes. The technique of stop-motion photography, used in making animated cartoons, gives a life-like quality to the puppets' movements. Simulated dialogue between the puppets and three-dimensional props and backgrounds also add to the realism.

Because of the realism of settings and puppets and the simplicity with which the story is told, children will be able to follow the story easily. Bits of humor throughout the film will hold their interest. Some of the more subtle incidents, such as bestowing on Snipper the Order of the Royal Pincushion—First Class, may be lost to younger children. Likewise, the full implications of the pretenses of seeing the cloth will probably not be understood by children in kindergarten and primary grades. Words, such as vanity, will need to be explained not only in context of the story but also will need to be related to other life experiences. The film will reinforce the adult viewer's awareness that fairy tales often serve a dual purpose by providing both an entertaining story and a lesson in human relationships.

— Beryl Blain

## New Coronet Films Show Great Scientists at Work

*highlights of their lives and their major contributions*

- Aristotle and the Scientific Method
- Galileo
- Isaac Newton

Three films of an entirely new kind from Coronet bring to life the human side of science. Authentic in every way . . . filmed at actual locations in Europe . . . these motion pictures present a stimulating picture of the life and work of three great thinkers. High school students will gain new appreciation of how devotion to science by men who lived centuries ago furnished the basis upon which many of today's fast-moving scientific developments are built. These pictures of the human mind at its creative apex will inspire young scientists and perhaps suggest the parts they expect to play in this

great process. Each film is 13½ minutes in length and is available either in full color or in black-and-white. Use the coupon to request your preview prints.

Do you have Coronet's catalogue of science films? . . . If not, use the coupon to order your copy. It contains descriptions of more than 250 carefully selected Coronet films to help teach science and mathematics. Each may be purchased under provisions of the National Defense Education Act. Multiple copies of this catalogue are available for distribution among those who may be planning programs under terms of the Act.

# FILMSTRIPS

by Irene F. Cypher

We have heard it said that to build a solid foundation one should make haste slowly. There is much to commend in this sage injunction, but there is also a potential danger. That danger rests in the interpretation of what is meant by "slowly." The reason we call attention to this is that we frequently wonder just how long it will be before all those who have recourse to filmstrips in the educational field actually use them for what they are — a type of instructional material that can help to bring life and reality to a learning situation. We have seen more good filmstrips murdered by a "smothering technique" which pushes them into the background and more or less stifles the real potential of the material. To paraphrase a certain currently popular television program (and with apologies) we say "To put a little fun into your classroom periods, why not try using your filmstrips with a dynamic presentation!" Filmstrips can be just as effective as motion pictures; they can bring action and motion into a lesson; they can evoke discussion — but they will never do it if you grudgingly use them as a substitute for something else; if you plow through them with as little verve as a lead weight. Think it over.

### Holiday Filmstrips

(3 single strips; Society for Visual Education 1345 Diversey Parkway, Chicago 14, Illinois)

### How We Got Our Christmas Customs

(single strip, color, with 33 1/3 rpm. record and guide; \$10 for unit). We have never had a year go by without hearing someone ask "how did we get . . . ." and then the questions come tumbling out. People of all ages want to know how we come to do certain things, why we celebrate certain customs, etc. This filmstrip will be very helpful when some pupil wants to know how we started the custom of sending Christmas cards, why we use mistletoe and holly for decorations, and how people in different parts of the world celebrate Christmas. The customs illustrated are

significant ones all around the world and there is a wealth of interesting detail. The recorded narration is good and carries us through the story. It is a strip to be recommended for use anywhere and by anyone who wants to know more about Christmas.

### Mary's Pilgrim Thanksgiving

(single strip; color; \$6). There is a unique quality to Thanksgiving that sets it apart on the calendar for all Americans, and this filmstrip has something of that "specialness" for the story. It is the story of Mary, a little Pilgrim girl, who gets lost while out gathering nuts for the harvest feast. All of the facts necessary for considering the historical meaning of Thanksgiving are included in the story, but there is an added touch of human interest that makes it seem real. Very good for social studies and language arts in the lower and middle grades.

### Barbara's Happy Christmas

(single strip, color with 33 1/3 rpm. record; \$8.50 for unit). This is not just a story about Christmas, it is the story of how one family invites a girl from a children's home to visit them for the holiday and to share in their family festivities. The story includes sequences in the children's home itself, and indicates that there too every effort is made to provide a happy holiday experience for the boys and girls who live there. It stresses the fact, however, that there are values in family life that all can share with those who do not have families of their own. The narration is natural and the story well presented. It is to be recommended both for school groups and also for church and community organizations of all ages.

### Space And The Atom

(10 strips, color; produced by Encyclopedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$60 per set, \$6 single strip). Adapted from

the Disney motion pictures dealing with man and his flight into space, these filmstrips are planned to provide answers to many questions about space, the atom, the moon and space flight. Relying on the Disney cartoon technique to stimulate interest, and with a minimum of caption, they are correlated to science units in the middle grades and high school. The two strips dealing with man and his flight around the moon are very timely and give us some very excellent ideas of what might be seen from a rocket ship. The pictorial explanations of the structure of the atom are good, and pupils will be interested in the story of how man learned to fly. This is material of interest to today's pupils and is presented in a manner likely to meet them at their own level of both study and hobby activities.

### The Boy Scientist Series

(5 strips, color; produced by Long Filmstrip Service, 7505 Fairmount Ave., El Cierrot 8, Calif.; \$23.50 per set, \$5.00 single strips). Young scientists start their experimentations early these days, and this series is planned to help 3rd, 4th and 5th graders in their activities. Bob, star scientist of the series, builds a telescope, visits the moon, investigates the construction of a rocket, learns to use a microscope and investigates the structure of atoms and molecules. Cartoon style is employed to present characters, diagrams and explanations. The language is simple and there are review questions for further study and project work. The approach to subject matter is timely and appeals to the current areas of pupil interest.

### The British Isles

(5 strips, color; produced by Jam Handy Organization, 2821 East Grand Blvd., Detroit, Mich.; \$25.95 per set; \$5.75 single strips). There are many facets to life in the British Isles and this series takes us on an "overview" of the farming and industrial sections, everyday life in London, and comparable life in Ireland. Emphasis is in all instances on the natural resources and those industries and economic factors that have contributed to making the British Isles a great world leader. Maps help us to orient ourselves geographically; the pictorial sequences introduce us to coal fields, cottage farmers, urban London and Dublin. The viewer also sees something of the historical landmarks that

represent milestones in the growth and development of Great Britain. The material is planned for middle and upper grades social studies and geography.

### Our Sky

(4 strips, color; produced by Filmstrip House, 347 Madison Ave., New York 17, N.Y.; \$20 per set, \$6 single strips). We hear so much about space today and yet so very few seem to know much about the sky which is a part of that great area we so glibly call space. Certainly a knowledge of some of the simple facts of astronomy and the heavens will help us to enjoy the sky as we look at it each evening, and it will also help us to a better understanding of modern space problems. *What We See In the Sky; Our Solar System; The Earth In Motion; Our Moon* are the separate titles, and the material includes authentic sky maps, facts about rockets and space travel, and basic principles of elementary astronomy. The filmstrips are good to use in connection with possible visits to a local planetarium and they are also good for science units.

# AUDIO

by Max U. Bildersee

Audiovisual personnel are faced with the altogether pleasant task of using monies. But the pleasant aspects include great responsibility to use the money wisely. If we do not make the NDEA funds with which we have been entrusted contribute markedly to educational progress we shall have failed.

Each of us, at one time or another, has said in our dreams, "If I had a million dollars. . . ." Suddenly, we do!

If we had that "million dollars" we would go to a good and reliable investment broker, who might tell us that the first phase of a sound investment program involves properties—conservative and sound investments in properties. These include savings banks accounts, government securities and "gilt edge" bonds, adequate insurance and home ownership.

So let's make the conservative investment—the properties investment—first and be sure that the schools we serve are adequately supplied with needed equipment and maintenance and full information concerning materials.

The second phase of the investment program involves income producing securities. Translated into audiovisual terms this involves the development of a sound teacher-training program relying not only upon our own individual talents but, as we are able, calling upon the specialized knowledges and talents of each individuals. Because in this area we are entering boldly into materials of the instruction aspect of the audiovisual program, this phase cannot be undertaken without the consultation, advice and guidance of other members of the professional staff. Certainly, in this day and age, we would not consider any teacher-training activity—either in-service or pre-service—adequate unless the emphasis was placed on the materials available, their utilization in instruction and the outcomes to be anticipated.

Next, our investment advisor tells us to look for "growth investments" which may not yield heavy returns immediately but which in the long run are extremely valuable. Each year we hear of people who invested a few dollars in some stock which, over the years, has yielded a spectacular return.

The growth we seek is educational. Therefore we must seek growth investments in instructional materials which will help our students develop the seeing and listening skills which enrich their lives and secure their well being. This growth investment may be in films and filmstrips, it may be in recordings, it may be in a variety of materials for a variety of purposes. We will not see an immediate return—we are in a sense gambling—but we anticipate that today's students will be better prepared for their tomorrow because of this growth service we have rendered.

Does the investment broker stop there? He does not. He also recommends that a proportion of our 'million dollars' be used as *risk capital*. In our whole history—instructional as well as economic—it has been the 'risk capital' which has meant rapid growth. In the current scene we are 'risking' many millions of dollars each year in the area of educational television. It is new, it is challenging, it has a contribution to make to education both in school and out, and we are risking capital in the form of time, money and talent to discover the services as well as the limitations of this magic medium. And we all believe that, as other audiovisual communications media found a level of contribution to education and instruction, so will TV.

## Let's Experiment

So, too, will other media. But we must experiment with them. There are new devices for teaching reading, new devices to encourage the slow learner, new devices to challenge the gifted student as well as new concepts in materials and equipment designed for classroom and for individual study.

We MUST risk capital (and at long last we have the capital to risk) to experiment boldly with these devices and machines and materials to determine in what ways their contribution may be superior—inferior or average. Indeed, we may find the instructional millennium in some new device to be introduced tomorrow or the day after. A few of us will hail the new as "miraculous" and the "answer to all our prayers." A few will damn with faint praise and a few will dis-

miss the new with a "just another gadget" approach. But most of us MUST plan to experiment to learn the truth.

As we risk, so must we report. We must report the successes—and the failures with equal candor. We must share information to progress.

As we invest our newfound wealth over the next few years (and no sound investment program is consummated in weeks) we must consider immediate needs, immediate returns, growth and the virtue of risk if we are to wisely husband and expend our money and face up to the grave responsibility we sought and achieved.

Another factor to be considered is the current swelling of the ranks of audiovisual sales personnel. There are 'old line' firms handling 'old line' equipment, and there are 'johnny-come-latelies' who are taking whatever accounts they can secure. It cannot be said that all the newer dealers are planning to take advantage of the new monies and then disappear leaving the schools with little more than vouchers marked "paid" and broken equipment. . . . nor can it be said that more experienced dealers and producers will not bend every means possible to take advantage of the situation and thereby undermine the confidence of the public in audiovisual education.

This then becomes a "buyer beware" market in which we as custodians of public funds must examine the intent and reliability of the materials producer and his product and the distributor as well. And the fact of newness or antiquity cannot be a deciding factor—responsibility and reliability must be the pivotal points.

For, if we eschew the new distributor we seriously limit the potentials of service, and if we similarly shrug off or deny the new material or information source of machine we lost the 'risk capital' values of the NDEA funds.

While 'risk' is on our minds may we point out that a new and, we believe, potentially important valuable new development in education is the surge towards the teaching of foreign languages in the elementary schools. Yet the organizations offering materials in this comparatively 'new' area are the 'tried and true' of many years standing. Four firms offering materials particularly designed for elementary school application in this area include Ottenheimer (more than fifty years old!), Encyclopaedia Britannica (certainly old enough to vote!) Houghton-Mifflin (whose textbooks we all used when we were in school ourselves!) and McGraw-Hill (a standard name

in the publishing business for as long as we can remember!). These major organizations are putting 'risk capital' (frankly, for profit) into an experimental area of education—and we, too, should put 'risk capital' into this area (frankly, for profit) so that we may determine what new services we receive in the future.

**ENRICHMENT MATERIALS** (246 Fifth Avenue, New York 1) continues to supply recordings of interest to history and social studies instructors. The recordings, generally, are applicable in the upper elementary grades and junior high school classes in the teaching of American history.

*"The Mayflower Compact"* (EAD 3A) recounts the adventures of the Puritans through the early accidents involved in their voyage to the new world, the trials of the journey and finally the landing near Cape Cod. Through it all the importance of the individual and the individual's right of self-determination is stressed. The recording includes a dramatization of the framing, presentation and signing of the Mayflower Compact—the document which in many ways has become the keystone to democratic procedures. In the course of the recording, the document is read.

The reverse side of the recording is *"George Washington's Farewell Address"* (EAD 3B), an equally interesting and equally well-performed condensation of the address itself as well as of the times in which it was delivered. Throughout authenticity holds sway over dramatic intent, and yet the listening experience can be exciting to appropriately motivated children. The recording is, of course, essentially a reading of the document delivered by George Washington. The salient points offered by the retiring President are appropriately stressed through the narration. Included, of course, are General Washington's pleas for internal order, peace and cooperation, and his famous warning concerning foreign alliances. After presenting the recording to the class, in order to motivate discussion of current parallel problems, the teacher may well pose the question, "Do you think that President Washington would have said the same things today—knowing what we do of the speed of modern travel and modern communications?"

Four other titles have been added to the ENRICHMENT library, including *"Trappers and Traders of the Far West"* (ERL 117B) backed up by *"Alexander Hamilton and Aaron*

### A happy reel of spirited classics

... available in a special Audiotape bonus package

#### DETAILS OF THE PROGRAM

"High Spirits" includes these bright selections:

Strauss..... Frisch Ins Feld  
Strauss..... from Fledermaus Waltz  
Beethoven.... from Sympony No. 1 in C  
Tchikovskoy.. from Capriccio Italian  
Bizet..... from Carmen Suite  
Berlioz..... Rakoczy March

#### DETAILS OF THE OFFER

This exciting recording is available in a special bonus package at all Audiotape dealers. The package contains one 7-inch reel of Audiotape (on 1 1/2-mil acetate base) and the valuable "High Spirits" program (professionally recorded on standard Audiotape). For the entire package, you pay only the price of two boxes of Audiotape, plus \$1. And you have your choice of the half-hour two-track stereo program or the full-hour monaural or four-track stereo versions. Don't wait. See your Audiotape dealer now.

LIKE your classics bright and melodic? Do you enjoy music of the toe-tapping variety? Then "High Spirits" is just for you. This reel of sparkling classics shows you how vibrant and colorful music can be when it's recorded on Audiotape.

"High Spirits" is available RIGHT NOW from Audiotape dealers everywhere. Ask to hear a portion of the program, if you like. Then, take your choice of a half-hour of two-track stereo, a full hour of four-track stereo, or an hour of dual-track monaural sound—all at 7 1/2 ips. Don't pass up this unusual opportunity to put yourself in high spirits.

By the way, "High Spirits" makes an ideal companion to Audio's first bonus reel, "Blood-and-Thunder Classics," still available at Audiotape dealers.

Address.....

City and State.....

*Burr.* The former title deals with the Astor attempts to create a world fur empire, the rigors of both overland and water travel to the Pacific coast and the establishment of Fort Astoria. The latter story, that of the dispute and duel between Burr and Hamilton, is probably far better known to most school children. The recording relies on the Landmark book of the same title (by Anna and Russell Crouse, Random House, 1958) and follows it carefully. Through this recording students may learn of the backgrounds of the antagonists, their services in the Revolutionary War, their diverse political philosophies and finally the decision and action on Hamilton's part which so embittered Aaron Burr that, despite his high office and grave responsibilities, he challenged Hamilton to the famous duel which ended Hamilton's life.

Also released by Enrichment Materials this fall is *Commodore Perry and the Opening of Japan* (ERL 118A) which tells the story of Perry's successful endeavor to establish trade relations with the Japanese nation. This recording is accompanied by *Teddy Roosevelt and the Rough Riders* (ERL 118B). This rollicking story begins with the recruiting of men for the "Rough Riders," their training is recounted as are the difficulties of their journey to Cuba. We hear the story of the charge up San Juan Hill and finally are apprised of the return of the troop to the United States. The story is told through the eyes of the correspondent who accompanied them, Richard Harding Davis.

Of particular interest on this recording is the use of Teddy Roosevelt's voice—or an old recording of it.

In the recording, which may have great instructional values for the alert teacher who wants to challenge her class, Mr. Roosevelt begins a short statement with "The principles for which we stand . . ." and clearly summarizes his belief in the rights of the common man.

Mature high school students, college students and adults will find pleasure and satisfaction in hearing the superior recording of *The Picture of Dorian Gray* (Caedmon 277 Fifth Avenue, New York 16) which has recently been released. In this, excerpts from the novel are read by Hurd Hatfield, the actor who created the character on the screen. The constant degeneration of the physically unchanging individual mirrored as Dorian Gray sees himself through his own eyes.

This unusual recording can be used for individual listening, assigned or voluntary; for enrichment purposes for gifted students and as a strong motivation to read the Wilde novel complete. Although the reading is perforce reduced to the dimension of the recording, the moods and characters of the book are faithfully and expertly communicated.

Frederick Worlock gives us an excellent reading of selected Robert Burns poems in *POETRY OF ROBERT BURNS* (Caedmon Records, 277 Fifth Avenue, New York 17). Included in this recording are Burns' "To A Mouse," "Mary Morison," "For 'a That," "To A Louse," "Tam O'Shanter," "Sic a Wife as Willie Had," "The Banks o' Doon," "John Anderson, my Jo" and "Auld Lang Syne."

Most, or all of these poems are read in secondary school English classes—and this performance can add greatly to the pleasure of listening—and learning—about Burns.

On the "flip-side" Charles R. M. Brooks, a Glasgow schoolmaster, reads "Sir Patrick Spens," "Edward, Edward," "The Wee, Wee Man," "The Wife of Usher's Well," "The Twa Corbies," "The Lament of the Border Widow," "Get Up and Bar the Door" and other of the well-known SCOTTISH BORDER BALLADS. Each of these recordings is excellent and, although for a broad audience including home listeners and library patrons, has specific classroom applications of no mean import.

Hallmark Recordings Ltd. (81 Grenville Street, Toronto 5, Canada) offers the very interesting and useful "Folk Songs of Canada" which can be used most effectively in upper elementary and junior high school classes studying Canadian history, folklore and customs. This single twelve inch (33 1/3 rpm) recording contains nineteen recordings, some in French, including such titles as "Blood on the Saddle," "Dans Tous les Cantons," "The False Young Man," "Vive La Canadienne!" and "Brave Wolfe."

Canadian folk songs spring from the many sources which are the Canadian people. Each group has made its contribution and many are represented in the recording, including the Indians and Eskimos who inhabited Canada before the white man came, the habitants who sang their way westward and who cleared the farms of the St. Lawrence valley, the explorers (French and English) who struggled their way across the continent, the fishermen of the eastern seaboard, the pioneer settlers and sodbusters, the sailors and others who have made our neighbor to the North.

This album offers a good idea of the richness and variety of the Canadian national folk heritage. Here are the songs of soldiers and lovers, lullabies and ditties, ballads and dance tunes. Here are represented the combined French, English and American background which is Canadian culture.

Secondary school and college language teachers will be interested in *GERMAN STUDENTS' SONGS* (Folkways Records FW 8788—117 West 46th Street, New York City). These, sung by Ernst Wolff who accompanies himself on the piano, include many old favorites which students will recognize and will enjoy both hearing and singing.

## HOW TO MAKE PROFESSIONAL AUDIO VISUAL PRESENTATIONS!

# Ekotape<sup>®</sup>

## 310 RECORDER-REPRODUCER

WITH the built-in CONTROL CENTER

Just press the Control Center button — this records an inaudible signal on the tape where a slide change is required. On playback, these signals operate the slide projector automatically. Sight and sound are always together!

Now you can make audio-visual presentations with the same sharp timing and smooth flow as those prepared by professional studios. The Ekotape 310 Recorder-Reproducer makes it exceptionally simple — you can prepare a complete program right at your desk!

This specially designed tape recorder has the exclusive Control Center that keeps your taped message and the slide (or strip) projector in constant synchronization — *automatically*. There's no "next slide, please," no "beep" or tone signals — no chance for error. From start to finish, it runs through without *any* attention! And, if you wish to modify the program, the tape portion is easily adapted to changes in slide or film sequence.

Call your Ekotape dealer for a demonstration in your classroom — or write direct for literature.

Franklin edr. R-156

NO TIME FOR SERGEANTS (Libraphone, Box 215, Long Branch, N. J.) is one of the newer straight readings which, although intended primarily for use by ill and sight handicapped people, may also be used for pleasure listening by others. This recording is similar to the special recordings made available to the blind in that it is recorded on twelve inch discs at 16.7 r.p.m. It is different in that it is also available for purchase and for general use. Mac Hyman's best-selling novel was widely acclaimed, the adaptation produced on Broadway was a "hit." This is a complete reading of the adventures and misadventures of Will Stockdale, the easy-going draftee who just wanted to get along with everybody. William Lanteau, who reads the book, portrays a simple, likable mountaineer who delights in helping others and who just wants to serve in the army if that is what he is told to do. He has no particular ambition but "live and let live," no particular drive and is completely naive in his dealings with others—soldier and civilian alike.

The reading is well done. In order to contain the reading in six sides, sometimes it seems paced too fast for the listener. Still, it is a desirable addition to many loan type collections — in secondary schools and colleges as well as in public libraries.

Finally, you will be interested in GREAT NEGRO AMERICANS, which features brief summaries of the lives and contributions to the general welfare of such outstanding negro Americans as Mary McLeod Bethune, Dr. Daniel Hill Williams, Jess Owens, Louis Armstrong, Marian Anderson, John H. Johnson, A. Philip Randolph, Robert A. Cole, Charles C. Spaulding and Dr. Ralph Bunche. These distinguished Americans are noted for their contributions to the American way of living, and these are summarized in the recording narrated by Frederick O'Neal and Hilda Sims. This excellent, inspirational material is published by World Specialties, Inc. (140 West 31st Street, New York). Although it lacks examples of the art of Louis Armstrong and Marian Anderson, as well as the voice of Ralph Bunche, all of which would lend it greater authenticity, the recording may be used effectively for the presentation of information about these particular individuals. This excellent recording, or portions of it selected by the instructor, may be effectively used in secondary school and college classes in modern history and sociology to "kick off" discussions relating to current problems.

# A-V

## In the Church Field

by William S. Hockman

### Helen vs Ethyl Alcohol

Since repeal, which was to free the country of saloons and drunks, the grand strategy of the beverage alcohol industry has been to keep the attention of citizen, doctor, lawyer, church and clergy riveted upon the alcoholic. In effecting this shift from cause to effect the liquor interests have been clever and singularly successful in face of the general American bent to consider causes before symptoms.

We have all seen the "mean-mama" thesis elaborated in books and films. Its companion is the "un-loving wife" theory of alcoholism. This is the line of argument in the film, *Understanding Heart*.

The user's guide for this film says, while it "was produced as television entertainment, its insights into alcoholism, marriage relationships, and Christianity (even!) make it extremely valuable for church groups. Realizing the film's uses, Proctor and Gamble has made prints available for church distribution."

For a service fee, which is quite reasonable, this film can be secured from the Methodist Publishing House, Nashville, Tenn., and its branches in twelve of the leading cities of the U. S.

At the end of the film, Loretta Young summarizes by saying that "understanding is a two-way street." However, in the film it is Helen, wife of alcoholic Lou Mason, who does most of the walking. She does not understand him, trust him, and love him, indeed, as she should. This being the case, things get worse in their relationships. Lou deteriorates under the hammer blows of alcohol because Helen's love can't hold him together. What a phony thesis! Alcohol, a hydrocarbon narcotic powerful enough to destroy the strongest men, disintegrate the most adhesive human relationships, and corrupt the soundest society, comes off without a scratch of blame. The powerful industry that aggressively promotes its consumption by all ages is not remotely related to the problem. Helen, the wife, is handy, so Ethyl Alcohol goes

blameless. This is Part One of the film.

Now in part two there is an upturn. The couple next door, one a former alcoholic, comes to the rescue by offering understanding and by getting Helen and Lou into Al Anon. Of course, un-loving, misunderstanding, and suspicious Helen is kept in a bad light right to the end of Act Two while her thawing husband absorbs by social osmosis not only the strength to do right but to act prematurely noble.

I am sure that we need to see this film. We need to see it but not accept its thesis. Of course something should be done to help the alcoholic. This is the job of citizen and Christian. It is also the job of responsible citizen and sincere religionist to go after the cause; to deal with the producer of victims. The alcohol-cult must be dealt with. That's central. Concentration upon effects, to the total neglect of cause, suits the liquor industry to a T, but is also fatal folly.

If this film can concentrate the attention of the church and community upon its central tasks in respect to the evil of alcohol, then I recommend it heartily. If it advances the ends and objectives of the grand strategy of the irresponsible liquor interests of the country, I most certainly do not commend it but on the other hand deplore its original production and its present distribution.—WSH

### Utilization Report

The first item to catch my attention in the AV utilization report from the Woodside Methodist Church, 8750 Georgia Ave., Silver Spring, Md., was "7 failures." Miss Esther Fox, Director of Christian Education, not only believes in recording the total number of AV usages but also in keeping track of AV failures. She even gives the reasons for these failures—2 machine failures, 1 human error, 3 changes of plans, and one time the film itself just did not arrive.

Turning to the positive, she reports that the 43 showings which came off were distributed among the media as

## FOR JOYFUL CHRISTMAS PROGRAMS USE

Christmas programs in your church will be greatly enriched with these colorful, inspirational filmstrips. The true message of Christmas is presented in many new and effective ways. Filmstrips for all ages, in beautiful color, with sound, and SO EASY TO USE.

**WHEN JESUS WAS BORN**  
(Kindergarten)  
4 filmstrips in color, with records . . . \$19.50

**WHERE JESUS WAS BORN**  
(Primary)  
**LAND OF JESUS BIRTH**  
(Junior)  
Each filmstrip in color, \$5.25  
Record, \$2.00

**STORIES ABOUT OUR CHRISTMAS CAROLS**  
**STORIES ABOUT OUR CHRISTMAS TRADITIONS**  
Each filmstrip, in color, with record . . . \$10.00

**THE CHRISTMAS RIDDLE**  
**A PONY FOR CHRISTMAS**  
Each filmstrip, in color, with record . . . \$10.00

Yes, a truly Merry Christmas season is yours with **FAMILY FILMSTRIPS.**

See your nearest Family Filmstrips dealer, or write for information.

City \_\_\_\_\_

follows: 30 filmstrips; 2 films; 2 sets of slides. These were all in classrooms. In addition to this, 7 films were used with parents' groups and one filmstrip and one set of slides were used in evening youth meetings.

Her records also show that the 43 showings were distributed as follows among the various groups of the church: Kindergarten 7; Primary 10, Junior 11; Youth 6; adult classes 2; parent groups 7. When this material is viewed from the standpoint of broad topic classifications it falls into the following: God's World, 6; Bible Content, 5; Biblical background 3; missionary information 3; questions of Christian action 5; mental health 2.

This report runs for the period of March 8 through July 5, 1959, and in this period there were two seasonal emphases, the first Easter, and the second the Vacation Church School. She reports that other uses were made of the AV equipment during this period by the Scout groups and by groups of women, but for these no record is kept.

This department would be pleased to receive utilization reports of this type from time to time and will try to find space in this department for their publication.

### Producer Becomes User

Many church people know The Rev. James K. Friedrich, and just about all the A-V people of the churches know him as the president of Cathedral Films. We doubt if many people know that he is also a teacher of children and a user of his own and other audio and visual materials. Across his whole producing career he has been close to the church and its children. A great church grew out of the children who came to see religious pictures which he showed in his backyard. The parents came to see what interested the children of the neighborhood so much, and he challenged them to start a church school and led them in the work. Out of it grew what is today a great and influential church. Thus when "Jim" talks about materials and what they are good for he is speaking out of vast experience and deserves to be heard.

With his permission, we want to share two paragraphs from a recent letter. He is one of the ministers of the All Saints Church:

"I had a wonderful experience one Sunday at All Saints in Beverly Hills with 21 little children from the first and second grades using *Little Hiawatha* from the "Tales of Jiminy Cricket" series. As you know, this series has the theme 'being The Church.' The children were fascinated

by the picture. I had no disciplinary problem, everyone being completely absorbed in the picture itself. It was the discussion which followed that amazed me. I discovered that with this tool it was possible to put some great theological truths into the minds of little children when they ought to be absorbing these ideas.

"As the little children began to retell the story they discovered that when Little Hiawatha found that the little rabbit didn't want to fight him even if he gave him a fair chance, then he didn't want to fight the little rabbit, and the community of the forest took him into their fellowship. This is the way the church works with individuals. Children can make the transfer and understand the true function of the church if it is presented in this way. Then too, those who were members of the forest family were animals of all kinds and colors. It didn't make any difference who they were. They were now all a part of a great fellowship, as was Little Hiawatha, and when he got into trouble they helped him. This again is the purpose of the fellowship. So you can see there is a great opportunity to teach the fundamental lessons of the Christian faith to little children with these wonderful A-V tools."

### Filmstrip Notes

The JIMINY CRICKET series by Cathedral Films, Inc., Burbank, Calif., is in color; has LP records; utilization guides; and the famous Walt Disney type of art. There are six titles in Series I: *The Tortoise and The Hare*; *The Brave Little Tailor*; *Little Hiawatha*; *Pluto's Fledgling*; *The Ugly*

*Duckling*; and *A Ducky Decision*. The color cartoons are enhanced by background music and Jimmy Cricket narrates each tale — which tries to tie in some aspect of the Gospel as well as entertain. Excellent technical qualities; good utilization possibilities in vacation church schools; in week-day schools, in clubs of all kinds; in camps; and in church school by those who favor this indirect and ingratiating way of presenting moral and religious truths. Set price, \$41.85.

*Extended comments are not possible in the space available, and I shall use three quality ratings: excellent, good, fair. We regret that we can't justify these evaluations.*

*Mary's Pilgrim Thanksgiving* is a 34-frame, full color art, captioned filmstrip telling of a Pilgrim girl's adventures on the first American Thanksgiving in the fall of 1621. The pictures are good; the captions fine; the whole job useful with Juniors in church and school when trying to make real the times and origin of the first Thanksgiving. The price is \$6.00; producer is SVE, 1345 Diversey Parkway, Chicago 14, Ill.

Another SVE production is *Barbara's Happy Christmas*. In 40 frames of good color photography and a nicely recorded script, this filmstrip tells how Barbara, a seven-year-old, was taken from a children's home by a family for Christmas. It will be useful with children, to show them how fortunate that they have homes; useful with adults to show them how much love means to children and how they must share it. LP record plus guide is \$8.50. Recommended.

# SYLVANIA CERAMIC BLUE TOP

PROJECTION LAMPS... for all makes . . . all types . . . in all sizes

New Sylvania Ceramic Blue Tops are available in all standard sizes for any projector . . . to fill your exact requirements for clear, brilliant projection.

**Blue Tops offer these superior qualities:**

- Brighter . . .** Ceramic Blue Tops won't scratch, chip or peel like ordinary painted tops . . . machine-made filaments assure pictures bright as life.
- Cooler . . .** Ceramic Blue Top is bonded to the glass for improved heat dissipation . . . cooler operation assures longer lamp life.
- Longer Lasting . . .** Exclusive Sylvania shock-absorber construction protects filaments from vibration damage.

Use a Sylvania Ceramic Blue Top in your projector . . . your slides and movies deserve the best!

# New Equipment and Materials

For addresses of the sources supplying information on which these listings are based, refer to **Directory of Listed Sources**, page 622. For more information about any of the equipment announced here, use the enclosed reader service postcard.

## NEW EQUIPMENT

### CAMERAS: Movie, TV

**Electric eye, zoom lens, 8mm, motion picture camera** is battery driven, has through-the-lens viewing/focusing. \$199.50; carrying case and handgrip \$14.95. **KONICA**.

For more information circle No. 101 on return postal card.

### CAMERA ACCESSORIES

**Startech Closeup Camera** (additional data). Adaptation of the Kodak Starflash for closeup work offers 2 apertures: "red" f/64 with matching 7-plus diopter "red" portrait lens taking half lifesize at 4"; "green" f/27 with 3 plus lens taking approximately 1/6th lifesize at 12". Used in combination experimentally a 1.1 image was obtained at 2". **KODAK**.

For more information circle No. 102 on return postal card.

### PROJECTORS: Still

**Automatic 2x2 Slide Projector** features (12 ft.) remote-control automatic advance, reject or hold; 5 to 60 second intervals; changeable white showing; 500-watt proximity-reflector lamp; 45-slide trays; Model "990" with remote controlled automatic timer \$94.50; without timer \$64.50; accessory carrying case holds timer and 3 trays \$14.95. **REALIST**

For more information circle No. 103 on return postal card.

**"Projectolab", overhead and micro-projector**, a teacher-designed, limited field and power. Complete with 80mm f/3.5 and 28mm f/1.2 lenses, (the latter for microslide projection) \$39.50. Carrying case and a variety of plastic cells, slide, etc. available. **EDMUND**.

For more information circle No. 104 on return postal card.

### SOUND EQUIPMENT & ACCESSORIES

**Ampex amplifier-speaker systems**. Model 303, reportedly identical to that in the Ampex Signature Consoles costing \$2600, provides a 30 watt amplifier (60 watts peak) and 3", 8" and 15" speakers requiring a 7 cu. ft. enclosure space, \$285.50. Model 302, 15 watt (30 peak) amplifier, 3" and 12" speakers requiring 2 cu. ft. enclosure, \$174.50. **AMPEX**.

For more information circle No. 105 on return postal card.

**Classroom TV Receivers** described in last month's issue are priced: 24" 219; 21" \$189; mobile school stand \$29. 30-day free trial offer, all expense paid. It is claimed 2,000 schools use these units. **TRANSVISION**.

For more information circle No. 106 on return postal card.

**Dual 30-watt Stereo Amplifier**, two amplifiers on one compact chassis, with power supply and metered adjustments common to both for economy and elimination of tube matching. **MARANTZ**.

For more information circle No. 107 on return postal card.

**28-watt stereo amplifier** features an input paralleling switch for instant change from stereo to monophonic operation; single-knob balance, stereo reverse and rumble filter. Five inputs per channel; two tape recorder outputs permit off-the-air stereo recording. Model KN728 \$82.50. **ALLIED**.

For more information circle No. 108 on return postal card.

**10-Channel Language Lab**—Transis-

torized amplifier (3"x8" flush mounted) and control console reportedly permits selection from among up to 10 sources, and two-way direct teacher-pupil individual contact. **RCA**.

For more information circle No. 109 on return postal card.

**Two Stereo Amplifiers**. Model G-7700 series, 56 watts (28 per channel) \$189.95; Model G-7600 series, 40 watts (20 per channel) \$139.50. Feature dual concentric bass and treble controls, compensating for speaker differences acoustic conditions; a contour control for greater bass response at lower loudness levels, rumble filter. The 7700 series also has scratch filter speaker phasing switch. **GE-RAD**.

## Orr Industries Roadshows

Orr Industries is showing a 30-minute motion picture film, "Objective: Perfection," in 25 cities, coast to coast, for the purpose of showing users of recording tape just how the product is made. The film, in sound and color, was produced by Ralph Whitaker, of Ampex Corporation; photographed by Warde Adams, of Orr.

## TV and Film Data Book

A very useful, pocket-size "TV and Film Production Data Book" (Ernest M. Pittaro) offers a compact presentation of the principal makes of camera, recorders, tapes, lighting and other studio needs, animation and time-lapse and high-speed equipment. Film exposure indexes, filter factors, field depth and area and many other oft-used data are crowded into its 448 pages, 132 photos and drawings, 128 tables. Morgan and Morgan publication, \$6.95.

## Four-track Stereo

The 4-track 7.5 ips tapes recently standardized by the Magnetic Recording Industry will play on Series 900 Ampex with no conversion needed, according to the manufacturer. Retailing at \$7.95, these tapes are expected to be competitive with stereo discs. Earlier Ampex models, such as the "A" series, convert to 4-track at cost of \$50.

## SVE Resumes "Visual Review"

The Society for Visual Education announces the resumption of publication of its "Visual Review," free, on a quarterly basis, beginning this Fall. Published as an annual from 1926 to 1947, this house organ succeeded an early (1920) pioneer magazine, "Visual Education," which was merged into "The Educational Screen" at the end of 1925. Nelson L. Green, founder of "Educational Screen" (1922) was the original editor of "Visual Education."

## TCE to SOS

The manufacture and distribution of the Toledo Cine Engineering line of Bolex 400 magazines and accessories has been taken over by the S.O.S. Cinema Supply Corp. of New York. S.O.S. has moved all tools, dies, etc. to New York and will continue the manufacture there.

## Cathedral Moves

Effective October 1, Cathedral Films, Inc., moved into its newly remodeled two-story building at 2921 West Alameda St., Burbank. This is just four blocks from its former location, taken over by the new Golden State Freeway. This is the second time a freeway development forced Cathedral to move to a larger and better location. The new air-conditioned headquarters includes more than 12,000 sq. ft. and is directly across from the new NBC television city. According to Dr. James K. Friedrich, Cathedral president, "The upsurge of religious interest throughout the nation, plus the increasing eagerness of churches and other religious organizations to incorporate audio-visuals in their curriculum and programs, make it necessary to do everything we can to meet this demand."

## Police Market Big

A market not to be overlooked by AV dealers is the local police department. Outstanding in applications of photography, according to Eastman Kodak, is the Los Angeles Department, which turns out more than a million identification photos a year and takes thousands of feet of 16mm movies every time a distinguished visitor is honored with an official parade and reception. A specialized laboratory is completely equipped for spectroscopy, x-ray, infra-red and ultra-violet work.

## HELPFUL BOOKS

**THE AUDIO - VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgar Dale. 384 pp. 1400 illustrations. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$15.00.

**AUDIO - VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition By Walter Arno Wittich and Charles F. Schuller. 570 pp. 249 illustrations. 14 Color Plates. Harper & Brothers 49 E. 33rd St., New York 16, N. Y. 1957. \$6.50.

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgar Dale. 544 pp. Illustrated; and with 49 full-color plates. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$7.75.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Eleventh Annual Edition, 1959. Educators Progress Service, Dept. AVG, Randolph, Wis. \$6.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Halsted, M. A. Fifth Annual Edition, 1959. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 19th Annual Edition, 1959. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**MITCHELL'S MANUAL OF PRACTICAL PROJECTION.** 450 pp. Illustrated and cross-indexed. Covers every aspect of motion picture projection. Material presented in easily understood language—not too technical, yet technically accurate. Most complete and practical handbook for projectionists ever published. International Projectionist Pub. Co., 19 West 44 Street, New York 36, N. Y. \$6.00.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation. By William Lewin and Alexander Frazier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$2.95 on approval.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Alpark Educational Records, Inc., 40 East 88th Street, New York 28, N. Y.

The **KEYSTONE** Standard Overhead Projector  
is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Standard (3 1/4" x 4") Lantern Slides, Polaroid Slides, and Handmade Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2 1/4" Slides, Strip Film, and Microscopic Slides.

It is useful—

In the Science Category with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

In the Mathematics Category in teaching Number Combinations tachistoscopically; Solid Geometry with Stereograms.

In the Modern Languages Category in teaching French and Spanish with Tachistoscopic Units.

Write for Further information or a Demonstration by our Local Representative.  
**KEYSTONE VIEW CO.,** Meadville, Pa. Since 1892, Producers of Superior Visual Aids.

has been acquired by Thompson Ramo Woodridge, Inc., which holds similar control of Dage Television, Bell Sound, and Bel Canto records and stereo tape cartridges. Dr. Paul King continues as MRI president.

## People in the News

Bernard O. Holsinger has been appointed director of marketing in the newly established Sylvania Electro-Specialties Division. Closed-circuit TV cameras and related electronic equipment will be handled by this division.

Dr. Herman H. Duerr, 28 years on the ANSCO staff, has been awarded the SMPTE Kalmus Gold Medal for his contributions to color film progress.

Cecil E. Monteith has been appointed Concordia Films' first full-time audiovisual field representative. He was previously on the Church-Craft Pictures staff, and prior to that in A-V retailing. Robert P. Hintz has been appointed Utilization Director, charged with development of Concordia's resource guides and other utilization aids, and with working with pastors and teachers at religious A-V workshops and conferences.

Harry Durham joins Southeastern Films, Atlanta, as sales manager and production director, following service abroad as director for the U. S. Army Signal Corps and completion of his M.A. at the University of North Carolina.

GUIDE

December, 1959 Volume 38, Number 12, Whole Number 382

William B. Sanborn is director of the Bureau of Instructional Materials of the San Francisco Unified School District. The bureau, which operates directly under the office of the superintendent, is composed of three sections: libraries and textbooks, audiovisual education, and a teachers' professional library. Sanborn, held an authority in educational instructional materials, spoke at the NAVA convention last summer.

Henry C. Ruark, Jr. is consultant on instructional materials for the State of Oregon department of education, division of general education. He is a member of a progressive educational organization among whose recent activities has been a series of seven television programs presented over the state-owned TV station.

Robert E. Snider, assistant executive secretary of the NEA department of audiovisual instruction, joined the DAVI staff in 1958 after five years in the department of education at the University of Chicago. Prior to that he was administrative assistant to the director of the Audio-Visual Center, Indiana University.

Elliott H. Kone, an active producer as well as evaluator and administrator of AV materials, is director of the Audio Visual Center of Yale University and is serving his second term as president of the Educational Film Library Association. Emily S. Jones, administrative director of EFLA, is one of AV's best known pro's.

Rev. George B. Ammon is a member of the Board of Parish Education of the United Lutheran Church in America. The board makes available to parishes throughout the country educational materials for youth meetings, Sunday school groups and similar activities.

W. G. "Bill" Kirtley of Louisville, Kentucky, is a veteran audiovisual educator and president of the National Audio-Visual Association.

Harry J. Skornia is executive director of the National Association of Educational Broadcasters, headquartered at the University of Illinois in Urbana. He is a nationally known figure in the field of radio and television education.

**NEW LOOK,  
NEW SOUND  
in this school's curriculum**

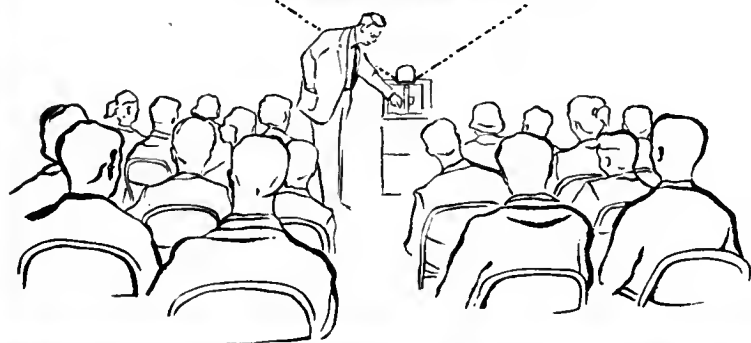

**... RCA AUDIO-  
VISUAL TEACHING  
AIDS ARE HERE!**

Isn't this the time to take a new look at *your* school's audio-visual equipment? One class after another learns more quickly, remembers longer . . . one teacher after another finds it easier to be more interesting . . . thanks to versatile new RCA Audio-Visual Aids like these.

RCA "Life-Tested"\* 16mm Projectors impress subject matter in every area . . . history to hygiene, physics to farming. Junior and Senior models are easiest to thread of any 16mm machine, run quietest, use 1200-watt lamps to throw more light on the screen, treat film extra gently. Porto-Arc projects extra brilliant large screen pictures.

# MAKE YOUR OWN SLIDES

## with the new Tecnifax Slidemaster System

The Tecnifax Slidemaster System is an integrated process for producing Diazo-chrome multi-colored slides for overhead projection . . . from the original drawing through mounting of the slide. No special skills are required . . . rudimentary techniques produce dramatic, colorful, professional-looking transparencies.

**PROTO-PRINTER** . . . a compact, portable, platen printer, weighing only 37½ lbs . . . equipped with a readily-replaceable photo-flood lamp, controlled by an automatic exposure timer.

**"PICKLE-JAR" DEVELOPER** . . . a simple, trouble-free ammonia-developer, with a new, hinged lid for rapid, fume-free insertion and removal of films.

**TECNIBOARD** . . . a basic component of the system, used for preparation of masters, as a platen for exposures, and for mounting of slides.

### FOR ADDITIONAL INFORMATION

For additional information and prices, please write to Section TS, Visucom Laboratories, Tecnifax Corporation, Holyoke, Massachusetts. Please indicate in your letter the nature of your interest in Visual Communication activities.

**INTRODUCTORY KIT** . . . contains enough Diazo-chrome film, mounts, and accessories to produce ten five-color transparencies . . . plus instruction manual and Diazo-chrome Color Guide.

**TECNISTAPLER** . . . special, heavy-duty stapling pliers for hinging overlays on dynamic transparencies.

# On the Screen

## Cover Scene

Our church-centered winter landscape, so suited to the season, is from "Stories About Our Christmas Traditions," a sound filmstrip produced by Family Films and described in the "Current Materials" department in this issue.

## Review and Forecast—59/60

The meetings and the shows, the heraldry and the awards — they stand out on the surface for all to see. But for 1959, what of the strong and silent current beneath, and where will it take us next year. . . ?

For this December issue, *Educational Screen and Audiovisual Guide* asked the help of some eminent AV people in totting up the activities of the past year and in plotting the probable course for 1960.

These articles underline the vitality in this field. Progress is not a placid thing, and since the word itself connotes new things one can see how the surface will be ruffled if only by the frequently-encountered resistance to change. The great majority of progressive minds in AV will carry the day here. Concerning new ideas and new techniques, there is much evidence of alertness and a readiness to judge on merit alone. Note, for example, the reference to teaching machines in the following articles.

The response of AV to the challenge of NDEA, we hope, is a portent of the fresh attitudes and lively reactions of audiovisual peo-

ple the country over. The coming year is certain to test these qualities.

## The Passing Parade

10 years ago in *Educational Screen*:

Eric Johnston's wish "to see an entire school system or several of them turned into giant laboratories to test the true worth of the screen to education" is hailed by editor Paul Reed as "A Challenging Proposal." Encyclopaedia Britannica's 20th anniversary; Coronet Instructional Films' 10th; Bausch & Lomb enter their 97th year. Armour Research Foundation gets a medal for developing magnetic recording for 8mm and 16mm film.

20 years ago in *Educational Screen*:

D.V.I. gets a new constitution; Nelson L. Greene editorializes that the Department "began twenty years ago, if we count its predecessors, with a handful of pioneers, and has crawled and intermittently climbed to something over 600." It should be 6,000, he wrote, in view of its potential membership market.

30 years ago in *Educational Screen*:

F. Dean McClusky continues his account of successful use of silent motion pictures at the Scarborough School. W. M. Gregory writes his views on visual education in Europe. Thirty-five theatrical features are rated from "Excellent" to "Worthless."

# PROJECTO-PRINTER 30

**Makes transparencies for overhead projection  
from any source material... in minutes!**

Now, with the new Ozalid Projecto-Printer 30, you can prepare transparencies—on the spot—*without being a photographic expert*. Using any original visual source material... textbooks, manuals, charts—whether opaque or tracings—two-sided, or even book-bound... you can get dozens of new visual effects in black and white or color. You need no darkroom—no trays—no mixing of messy chemicals. The Projecto-Printer 30 is a simple, self-contained unit and the cost is low. The simple process takes mere minutes. Anyone in your office can make projectables in just a few easy steps.

Overhead projection gives you complete flexibility in planning and delivering your presentation. Use the projection stage as a "blackboard" for specific emphasis. You're in complete control—no need for an assistant.

**Ozalid, Dept. No. I-12, Division of

News About People, Organizations, Events

## NAVA Appoints Chairmen of '59-'60 Committees

Chairmen of the 11 committees of the National Audio-Visual Association for the year 1959-60 have been named by W. G. Kirtley, president of the association. Committee members were chosen by the NAVA executive committee during its meeting in Chicago, October 15.

The major committees and their chairmen are as follows: Trade Practices committee—Harold A. Fischer, Photosound of Orlando, Orlando, Florida; Membership committee—Mahlon Martin, M. H. Martin Company, Massillon, Ohio; Resolutions committee—Paul Brand, Paul L. Brand & Son, Washington, D. C.; 1960 Convention Program committee—Harvey Marks, Visual Aid Center, Denver, Colorado; Nominating committee—William Birchfield, Alabama Photo Supply, Montgomery, Alabama.

Educational Committee—Ellsworth C. Dent, Coronet Films, Chicago, Illinois; Industry & Business Council—Robert P. Abrams, Williams, Brown & Earl, Inc., Philadelphia, Pennsylvania; Religious Council—Harvey Marks, Visual Aid Center, Denver, Colorado; Awards & Recognitions committee—D. T. Davis, D. T. Davis Company, Lexington, Kentucky; Com-

mittee on Insurance—J. W. Kintner, Photo and Sound Company, San Francisco, California; Trade Relations Committee—V. C. Doering, The Jam Handy Organization, Detroit, Michigan.

## Penn AV Association Honors Dr. Charles Hoban

Dr. Charles F. Hoban, Jr., Research Professor of Education, University of Pennsylvania, was presented with the

Dr. Hoban receiving honor award from Dr. Eugene K. Oxhandler, outgoing president of PAVATE.

second annual Honor Award by the Pennsylvania Audio-Visual Association for Teacher Education, at a banquet held October 30, 1959, as part of a joint conference between PennAVID

and PAVATE, at the Hotel Webster Hall, Pittsburgh, Pa.

In addition to an inscribed key, Dr. Hoban received \$500 worth of films or filmstrips from the McGraw-Hill and Encyclopaedia Britannica Film Companies. These films are to be distributed to any group chosen by Dr. Hoban, other than commercial film libraries.

Dr. Anna Hyer, executive secretary, DAVI, addressed the group Thursday afternoon on the myriad ramifications of the National Defense Education Act as it effects audio-visual instruction in Pennsylvania.

## Ely Named AV Director At Syracuse University

Donald P. Ely has been appointed director of the Syracuse University Audio Visual Center. He succeeds Dr. Donald G. Williams who has accepted a post at the University of Kansas City where he will be in charge of developing an audio visual program.

Ely has served as associate director of the Audio Visual Center since 1956 and for a year prior to assuming that position was director of audio visual education for the Hicksville, N. Y. public schools.

## Illinois AV Association Elects New Officers

At the annual Fall meeting at Moline, IAVA elected the following officers: president, Verne Stockman, Eastern Illinois University; vice-president, John Griffith, A-V director, Galesburg Public Schools; treasurer, Violet Auwarter, A-V director, Jacksonville Schools; acting secretary, James Boula, office of the state superintendent of instruction.

The board of directors now includes James Bambrick, AV director of the Peoria public schools; Elizabeth Bloss, director of A-V instruction, Aurora schools; Reynolds Hungerford, visual instruction supervisor, Chicago Public Schools, Donald Inqli, Southern Illinois University; William F. Kruse, *Educational Screen & A-V Guide*; Eugene Litchfield, Western Illinois University; J. Ross Young, A-V Coordinator, Peoria Heights high school.

The first afternoon was devoted to panel discussion and presentations on NDEA Title III. Lee W. Cochran, State University of Iowa, visualized

The **KEYSTONE** Standard Overhead Projector  
is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Standard (3¼" x 4") Lantern Slides, Polaroid Slides, and Handmade Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2¼" Slides, Strip Film, and Microscopic Slides.

It is useful—

In the Science Category with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

In the Mathematics Category in teaching Number-Combinations and Fraction-Combinations tachistoscopically; Solid Geometry with Stereograms.

In the Modern Languages Category in teaching French, Spanish, German and Russian with Tachistoscopic Units.

Write for Further information or a Demonstration by our Local Representative. **KEYSTONE VIEW CO.**, Meadville, Pa. Since 1892, Producers of Superior Visual Aids.

# DOUBLES EFFECTIVE LIGHT POWER

At No Extra Cost!

## iewlex V-25-P

The progressive Viewlex V-25-P 35mm Filmstrip and 2" x 2" Slide Projector moves A.V. TEACHING POWER years ahead — in a single giant stride! The ultra-advanced new light source combined with the new optical system in the V-25-P literally makes it "Easier to Learn With" . . . provides twice the effective light power on-screen — at no extra cost!

All Viewlex projectors  
are **GUARANTEED**  
FOR A LIFETIME.

an after-dinner presentation with an overhead projector and numerous original overlays. On the second day's program Dr. Sherman presented the "How and Why of Language Laboratories," and a panel headed by John Griffith discussed "Coordination of Audiovisual Materials With Other School Services."

A board meeting subsequently held in the state superintendent's office at Springfield outlined plans for spring and fall meetings in 1960, the former in Springfield and the latter possibly in the Aurora area. One of these is to include an equipment exhibit intended to attract classroom teachers and interested parents as well as the "pros." President Verne Stockman plans a series of one-day meetings with building coordinators and AV-using teachers in several major centers. Active participation in the July audiovisual conventions and trade show in Chicago is under consideration.

### IFPA Film Awards

In-plant industrial motion pictures are eligible now for prescreening in the third annual Industry Film Producers Association (IFPA) award competition, slated for March, 1960, in Los Angeles.

### Calendar

- Jan. 7-9—NAVA, Western Conference, Pebble Beach, Calif.
- Feb. 11-13—American Association of Colleges for Teacher Education, Chicago, Ill.
- Feb. 13-17—American Association of School Administrators, Atlantic City, N. J.
- Feb. 18-20—NAVA, Midwinter Conference, Shoreham Hotel, Washington, D. C.
- Feb. 20-21—Biological Photographic Association, Southern California meeting.
- Feb. 27-Mar. 2—National Association of Secondary School Principals, Portland, Ore.
- Feb. 29-Mar. 3—NEA Department of Audio-Visual Instruction, Cincinnati, Ohio.
- Mar. 6-10—Association for Supervision and Curriculum Development, Washington, D.C.
- April 10-13—California Association of Secondary School Administrators, Santa Monica, Calif.
- April 20-23—EFLA, American Film Festival, New York, N.Y.

*"Easier-To  
Learn-With"*

## iewlex V-25-P 500 WATT COMBINATION FILMSTRIP-SLIDE PROJECTOR

*With these exclusive  
Viewlex features —*

- Exclusive new "Venturi-Air-jector" cooling system permits unlimited showing time, lengthens lamp life . . . because it stays so cool.
- Simple-to-load automatic filmstrip threading.
- Projects single or double frame filmstrip, vertical or horizontal, or 2" x 2" slides.
- Changes in seconds from film strips to slides.

**Only \$92.50**

NEW TELEFOCAL ACCESSORY LENS produces images that fill screens of varied width at a given distance without moving projector or refocusing lens. It has an infinitely adjustable 3 1/2" to 6" focal length all in one lens. \$49.50.

Other Viewlex projectors available from \$50.25 to \$495.00. Ask your Viewlex Audio-Visual franchised dealer for a demonstration, or write for catalog.

# Machines For Your Future?

For audiovisual people who like to think, there's plenty of stimulation in the reviews and previews of this special issue. But we opine that thinking men will get their biggest challenge from Robert Snider's article about "DAVI and the Future," and more specifically from the part that quotes James Finn. Here is the making of a revolution that could place audiovisual thinking and people into an entirely new field and context.

Most audiovisual equipment—the still and motion picture projectors, the recorders and record players, the radios and television receivers—are products of technology. The audiovisual specialist's unique function in education has been to study and learn all there is to know about audiovisual tools and to help teachers adapt and apply these tools to the tasks of teaching. No other specialist in education has been so close to technological developments. No other specialist has explored so many educational frontiers.

One of the most exciting new technological advances in teaching and learning is the use of mechanical or electro-mechanical devices known as teaching machines. The problem for audiovisual people is that these challenging devices are not audiovisual equipment, and automated teaching methods have nothing whatsoever in common with audiovisual methods of teaching. Audiovisual teaching and automated teaching involve completely different theories. They're not opposed or contradictory, they're just completely different.

There you have the problem. Should these new technological devices for teaching and learning be the concern of audiovisual specialists? Dr. Finn says that this is a matter of the field growing up, a matter of redefining audiovisual education to include learning machines and presumably any other new technological developments that have applications in teaching. Maybe it should be expected as normal evolution that audiovisual thinking and organization will become integrated into larger groupings, that it will not remain the highly specialized and differentiated field it has been. To some extent this has already happened.

In many schools and school systems, the practical working definition of audiovisual was broadened when radio and television came along. Audiovisual became a part of a communications concept. Of course there are still situations where AV people resent television and try to pretend it doesn't exist, but through no logic can it be claimed that television is not audiovisual. In other school systems Audiovisual Departments have become Departments of Instructional Materials. It is the broad concern of these departments to select, distribute, and help teachers make use of *all* of the materials of instruction, all kinds of books, maps and globes as well as the traditional audiovisual materials. There's logic to this kind of thinking, too.

Now how do you fit teaching machines into the audiovisual future? We don't know at this point, but we're going after more information. We're going to see what these machines look like at the DAVI and other conventions. We're going to talk to people and get the book that Dr. Snider mentioned. And we're going to write to W. R. Deutsch, Publication Manager, 4361 Firestone Boulevard, South Gate, California, and ask him if he'll put us on the mailing list for the "Automated Teaching Bulletin."

Maybe next time there's a problem like this, we won't have to think about it; we'll just get the answer from a machine.

*Paul C. Reed*

**Kodak**  
TRADE MARK

At the Blue Island, Illinois, Community High School, District 218, William Liska, Audio-Visual Coordinator says:

**“Our Kodak Pageant Projectors stand up to 160 boy operators, run 5000 showings a year without oiling.”**

“Projectors get a severe workout under our heavy audio-visual schedules. Youngsters who run them have varying attitudes about care. So the operating simplicity and ruggedness of a Pageant are important features to us.

“Constant hard usage by so many people would also make it next to impossible to keep up with lubrication and maintenance records. That’s why we place such high value on the lubrication-free feature of the Pageant.”

Perhaps you would like to see how easy it is to operate this sturdy projector that ends oiling headaches forever. Your Kodak A-V dealer will demonstrate. He’ll also show you how the Pageant throws 40% brighter pictures on the screen at sound speed . . . how it fills the hall with distinct *sound that you can control*. Or write today for Bulletin V3-22 that tells you all about Kodak Pageant 16mm Sound Projectors.

*Kodak Pageant Projector* > **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

## Our Future Stake in

by William B. Sanborn, Ed. D.

THE following are a few points of concern to me as one of many individuals whose profession is the field of instructional materials. Some of these observations may not please you, you may not agree, but one thing seems apparent: in recent years at many conferences and in many of our professional journals, things are said, points made, concepts pushed that are most likely to be well accepted and to please the listener or reader. Few statements are made that would be termed objectively harsh, or professionally critical. This is unfortunate.

These are rapidly changing times. If anything, those of us in the field of instructional materials are much too complacent in terms of thinking the 'public' is thoroughly familiar with our methods, techniques and tools simply because we have known their value for over 20 years. We are also too hesitant regarding an objective, honest, professional exchange of data and information on major issues and desirable changes needed in the field of instructional materials. This is probably the product of heavy work schedules, not lack of interest. Audiovisual education is not a field destitute of materials, techniques, or equipment. On the contrary, we are now swamped with materials and equipment, with several competing manufacturers for almost any specific type of equipment and with an incredible overlapping of duplicate curriculum coverage in dozens of areas and subjects from the 16mm film and 35mm filmstrip producers.

Instructional materials are key parts of any curriculum situation, in all teaching-learning situations that exist by the thousands in the public schools, colleges or universities; the armed forces, and business and industry. The basic grass roots issue facing education as a whole in the United States is of prime importance to all

of us in instructional materials, whether it be the superintendent of schools, director of audiovisual education, teacher, equipment manufacturer, materials producer or the vendor. It is a somewhat unique situation of interdependence. Here are a few current and basic factors.

There is without doubt more national concern now about education than at any time in our history. We are in the throes of either suffering or recovering from "Sputnikitus" or the "Russian D-T's." The Russian school system is a very realistic threat and challenge, not from the standpoint of possessing any superior students or teachers, but because of the specificity of student selection and the over-all structure of the school system. We are in a period of questioning and evaluation of the United States educational system — which has some startling differences between the states. We are offered an abundance of remedies issuing from professional educators, lay boards of education, "splinter" professional groups, sensationalists, business and industry. Any educational system can be improved upon. One thing is important however: U. S. education is certainly not as bad as pictured by highly colored, 'out of context' reports.

Of importance is the fact that the *public* is interested in education, in our schools, their programs, methods and materials. A few years ago articles concerning schools were buried on the back pages of the newspapers and magazines. Today schools and education are front page news—and this is as it should be. Whenever the public becomes interested in our schools the ultimate benefactor is the child.

This period of concern and scrutiny may reveal some shortcomings but it also reveals the rich strength and depth of our educational system.

# Instructional Tools

Today we also find increasing competition for school time. To be blunt, the curriculum is crowded. Under such conditions we can afford to use only those techniques and materials of greatest proven value, the most efficient and effective and of highest quality. The instructional materials field now has assumed such depth in terms of availability that there is no reason to accept or use materials which are not outstanding. There should be no room for mediocre materials.

A potential change rests with our traditional belief in a 'general education for all.' This may be severely modified in years to come with much greater attention to specialization or channeling of interest tendencies in the elementary level. This is a provoking challenge for the future in terms of new and fresh materials perhaps of radically different format.

Today the importance of instructional audiovisual materials portends the greatest potential in the history of the field. No aspect of education has grown so fast in so few years and met with such widespread professional and public acceptance. Now the National Defense Education Act lends significance to the values and merits of such techniques, materials, and equipment on a national level. Because of this fine potential it seems that this is also the time to be extremely cautious. If ever there was a time for instructional materials experts to be alert, thoroughly professional, and not to over-sell or over-stimulate, this is it. We need to stress in our contacts the term *instructional materials*, and the rich variety of materials involved. This is a much more accurate term in light of current broad thinking of the field than the term 'audiovisual.' Also, audiovisual is still misunderstood by many of the lay public as automatically associated with 'movies for kids.' Of course, nothing could be further from the truth since the field involves many different materials and techniques beside those inherent in the 16mm educational film.

In view of the foregoing it appears that reinforcement is needed. We are talking about professional teaching tools and techniques, they are *aids*, not *ends*, *means* not *goals*, *helps* not

*crutches* for poor teaching. They are not designed to replace but to help the teacher. They are extraordinarily versatile yet not panacea. We do not advocate Canned Education terminating in Mechanized Matriculation, nor are we in the education business for baby-sitting or entertaining. We know these are powerful, effective, efficient tools in the hands of skilled teachers. But do not be complacent—many people need intelligent interpretation of the meaning of instructional materials and audiovisual education. Certainly the foregoing is not original nor new; these remarks have been the standard stock-in-trade of the audiovisual specialist for years.

William B. Sanborn

They are simple, accurate, valid statements and should not be eclipsed by advanced electronics!

There are some disturbing factors within our own profession. Teacher recruitment and training is at a point of decline. Due to low salary and in some areas low professional status, we are not attracting many desirable people to education. Remember, the classroom teacher is still the most important element of an instructional program. In many teacher-training institutions good solid training in audiovisual and instructional techniques has become lost or hybridized within a confused welter of methods and administration courses. Much of this teacher training has become "self-centered" rather than "community-centered"—the true role of the good teacher. In some instances prospective teachers may be taught by instructors who have had no actual experience in public school education or who were associated with it many years ago and let few new ideas permeate yellowed lecture notes. Teachers may be trained on a pink-cloud basis, keyed to idealized conditions which well may not exist on most practical teaching jobs. Many in-service offerings need overhauling to become more evaluation and utilization-centered than overtly concerned with equipment operation. Those state teacher training institutions with audiovisual unit requirements for teacher certification are to be congratulated.

There are some areas of possible trends in the future that need our support and a cooperative watchful eye. Here are a few:

1. Because the American people are demanding it, there is a swing back toward the emphasis

on the 3-R's. This is the trend, and the social sciences and arts will for a time take a back seat. This does not mean that we should abandon the perfection of better teaching tools in these fields, for we will always need social scientists and artists.

2. We may see a marked interest in the simpler type of instructional aid with emphasis upon local production in terms of slides, films and overhead materials. With present inexpensive and automatic 35mm and 16mm cameras coupled with available film emulsions, excellent local teacher-made units can be produced. We need more *localized* audiovisual material.
3. An 11-month-school-year may become a reality in the future in order to make better use of the public investment in school plants and to intensify and speed up the educational process as a whole.
4. There will be greater interest in the techniques of evaluation of instructional materials. This has been a neglected aspect of our field, and now with a market literally swamped with materials, the need for effective evaluation techniques is more apparent.
5. We will see markedly improved school plants in terms of basic audiovisual installations and provisions. We will see teacher-desk-teaching stations; i.e. the teacher's desk as a focal point of both projected, audio, and television activities. These units will be an integral part of the desk or immediate area. Room darkening provisions will become a standard fixture.
6. There should be a growth in filmstrip use, both in silent captioned and the sound types. In terms of coverage and over-all quality, filmstrips represent one of education's best instructional buys.
7. Much more in the field of realia and specimen materials will be included or emphasized within the concept of audiovisual education. Although in the science fields, audiovisual education is the logical source for fine circulation sets of fossils, crystals, minerals, rocks, ores, mounted plant and animal materials, and seashells, to mention a few. We learn much through the tactile sense; it has been neglected in terms of well organized potential.
8. Educational television is here to stay, but in just what form no one knows. Closed-circuit TV will evolve as a highly useful and specialized technique and should be divorced from the stereotyped concept of 'educational TV.' Educational TV remains in an experimental stage, and we must overcome certain statements and inaccurate publicity given to the media at the outset. It is another interesting, valuable, instructional tool. It has its place.
9. The importance of the 16mm film will continue, and we should see some imaginative and powerful changes in format. We should reject films that are not good solid instructional films easily justified in terms of teacher and class time. The arty, bizarre and off-beat films should be evaluated very carefully indeed.
10. The Language Laboratory is with us (although it is not a new idea) and the next few years should reveal much about the different types of equipment best keyed to do the par-

ticular teaching job at a given level. We have much to learn, and so do the language instructors in terms of use and advising on the subject. Here is an example of cooperation needed between audiovisual and subject specialists, and the manufacturer.

11. As an over-all trend, the audiovisual education field will both grow and fuse within the curriculum to a degree unheard of at present. There are a few areas where there is marked need for cooperation between educators, producers, manufacturers, and vendors or representatives. All should work together to promote the field as one of basic instructional materials.

Each year there is a waste amounting to millions of dollars of sponsored films ostensibly produced for direct or indirect classroom use. In recent years there have been some welcomed examples of sponsored films which have done a superlative job in the classroom; example Ford's *The American Cowboy* and General Petroleum's *In The Beginning*. However, as a whole, "sponsored films" are in need of more accurate focus if school consumption is sincerely desired. We need and can use good quality materials from business and industry.

We need to spread the word that the schools themselves are not the only users or believers in the techniques of audiovisual education! We need to cite the fine audiovisual programs conducted in many branches of the government such as the National Park Service and the Armed Forces, the outstanding in-service training programs of innumerable major business firms and industries, and the many programs in the religious field.

We also have the problem—which affects us all—of what is the future for the "audiovisual dealer." This is the firm that is reliable, demonstrates the equipment, has adequate repair facilities, and yet is consistently outbid on equipment by the corner drug store. The bid system is important, but so is service and the repair and maintenance of equipment. Repair and maintenance should be as important to a prospective purchaser as the equipment itself.

Manufacturers and representatives should not be reluctant to pass on a good idea or technique they have observed in some other city, college or university. Some manufacturers' representatives are in a superb position to come in contact with more different types of audiovisual programs and ideas than any of us who work in the field of the teaching-administrative side.

Perhaps the most important aspect of cooperation is one that cannot be stated in delicate terms. It is the marked need for more functional audiovisual education equipment. The best way to promote any idea or technique is to make it as easy, simple and foolproof as possible for the potential consumer and user. This is not the case with present audiovisual equipment. For the most part it is cumbersome, difficult or unstandardized in operation, unattractive, noisy, and not up to what American engineering has done in countless similar equipment and appliance fields. For example, take four current models of different 16mm motion picture projectors and put beside them the same make manufactured fifteen

years ago. Note any difference? Hardly any. Projectors have simply not changed, other than a series of color and knob placement faceliftings and some desirable internal mechanism improvements. Essentially the projectors of today are the same as fifteen years ago, and they are replete with the same problems and limitations. Now, turn to another field. Take as an example, vacuum cleaners and compare them with their fifteen-year-old counterparts. The difference is obvious; it is startling!

This is a period in which we should foster integrity and trust in audiovisual education and instructional materials between educator, producer, manufacturer and representative. This is a situation where mutual cooperation is valid; you cannot please everyone but we should be able to please more than we have. We can progress only if we continue the purposeful, objective exchange of data and ideas between experienced and practicing personnel. Audiovisual education is on the threshold of major advances and new depths of use and public acceptance, but we must proceed professionally. We all know what these techniques can do, but a one story building on a solid foundation is a better investment than a skyscraper on quicksand. For the most part this is public money; you pay it and I pay it. It should be spent only for those items of proven merit. We will move ahead, but at the same time let us regard the present high public and national interest in instruction as an opportunity to reinforce many of our basic beliefs in the tools and techniques of audiovisual education.

# NDEA Title III -

## Its Progress And

by Henry C. Ruark, Jr.

THE National Defense Education Act has been called the most significant educational legislation since the original land grant laws.

Title III, the NDEA program for the acquisition of special equipment to improve instruction in science, mathematics, and modern foreign languages, has been hailed for its national recognition of the audiovisual media and for offering an unprecedented opportunity for expanding audiovisual utilization.

What's the score in one state, after about a year of experience under Title III? What progress can be reported? What trends and changes are discernible? And what promise for the future can be detected?

The story in the state of Oregon:

Expenditures of more than \$1 million have been approved in 410 applications from 139 school districts, located in 31 of Oregon's 36 counties.

About 20 percent of these expenditures are going into audiovisual equipment and materials, and the percentage is expected to rise.

Significant local and state-level activities are taking place, and important trends are beginning to emerge.

Title III activities in Oregon really got under way with completion of the state's Plan for participation which was accepted by the U. S. Office of Education on February 16. Development of the Plan, however, started immediately following passage of NDEA and involved work with advisory groups and consultants extending for some months. A new Instructional Services Section of the Department was organized to administer Title III, Title V-A (Guidance and Counseling), and several other special-service programs and to coordinate activities with other sections.

Title III has two parts: the acquisitions program and a separate program for improvement of supervision and related services in the NDEA subjects. In Oregon it was decided to organize

---

*NDEA was no doubt the most important happening in 1959 for the audiovisual field. Rather than attempt a national summary, Educational Screen and AV Guide commissioned Mr. Ruark to do this more intimate and more specific report on what actually happened in one state. AV educators in other states will be aware of differences in their own bailiwicks, but also will note parallel lines of action taken.*

—The Editors

# Promise In Oregon

this program for the improvement of supervision through use of special consultants in each of the NDEA subjects and in the broad field of instructional materials. First activities of the new section were directed toward organizing the state's system for the acquisitions program, while personnel for the consultant activities were sought and plans matured for their functions.

Since February 16, Title III affairs in Oregon have moved ahead rapidly. A comprehensive guide to the program was written, and the necessary application, record, administrative and financial systems and forms established by mid-March. Regional conferences on project planning and application procedures were held in early April. Two application periods, covering 1958-59 and 1959-60 fiscal year fund allocations, have been completed and a third period is being held in December as a supplementary period for further 1959-60 allocations.

Speed was necessary if Oregon schools were to make effective matching use of local funds for 1958-59 before the end of the school fiscal year on June 30. The '58-'59 application period was deadlined April 17; by late May all participating districts had received project approvals and acquisition ordering was in full swing. It was thus possible to double the effect of nearly \$150,000 of '58-'59 local funds, resulting in total project expenditures of approximately \$300,000 in less than five months.

A second application period, for '59-'60 funds, was held immediately, deadlined May 29. This immediate second round provided evaluation of Oregon projects and early decisions for action by the school districts in late July and early August, thus allowing time for acquisition of project equipment early in the '59-'60 school year. Expenditures of \$711,000 have been approved, with \$83,000 more tentatively assigned.

Many Oregon districts have already been reimbursed for '58-'59 project expenditures and a good many have received and are now using some of their '59-'60 acquisitions despite the inevitable procurement and shipping delays.

Of the approximately \$1 million in federal and local district funds so far approved for expenditure, science has received \$631,000, mathematics \$194,000, and modern foreign languages \$184,000.

Nearly \$500,000 in federal funds for fiscal '59-'60 remains to be allocated to districts, since

a supplementary allotment of nearly \$330,000 for Oregon was contained in the NDEA '58-'59 supplementary appropriation passed by Congress in July. Since '58-'59 federal funds carry over for matching with local district money in the '59-'60 applications, much of the Oregon '59-'60 need is being met from '58-'59 federal funds. Thus there is a potential of nearly another \$1 million for NDEA expenditures in Oregon during '59-'60, and any unexpended federal funds will again carry over to '60-'61.

It is too early for any detailed analysis or evaluation of NDEA Title III effects in Oregon, but some important trends are becoming apparent.

For the AV field, it can be said that there is:

1. A growing interest in cooperative regional or area instructional materials libraries. Increasing demands for more types of materials, in a broadened range of titles and topics, is emphasizing the need for combined efforts among school districts to establish such centers close enough to their classrooms to speed availability yet serve large enough areas to provide efficient utilization.

2. An increasing awareness among many school administrators, teachers, and principals that good provision for audiovisual media demands the aid of persons competent in the field, not only at the planning stages but also for continuing in-service work with teachers.

3. Evidence that projects for the improvement of instruction in which AV persons have had a hand are much more effectively planned for the use of AV media than those projects lacking the guidance of a trained AV person.

Generally, these outcomes, perhaps more sig-

**59/60** **REVIEW & FORECAST**

nificant than the provision of equipment, can be seen:

1. Emphasis on curriculum change and development in Oregon during the five years immediately preceding NDEA created a readiness for action to improve instruction generally. This "context for change" has had a most noticeable and significant effect on Oregon's State Plan, on administration of the Plan, and especially on the acceptance and action under NDEA by local school districts and personnel.

2. Oregon, like the majority of states, has long believed in the practice of general supervision, and has carried on very effective work in this area. Title III is providing a significant test of special consultant services to extend the impact of this general supervision. Since this consultation program is still in beginning phases, it is too early to distinguish effects; however, the demand for services and the resulting types of activity already indicate that this approach to the Title III improvement of supervision program may be more important in the long run than the acquisition of any amount of special equipment by Oregon schools. This special consultant service is offered for instructional materials areas as well as for each NDEA subject area.

3. The "spotlight effect" of NDEA, focused sharply on science, mathematics, and modern foreign languages, has brought about increasing concern for other subject areas. Oregon school administrators generally are doing their best to move ahead in the improvement of instruction in other key areas for their districts, as well as participating in NDEA subject area projects.

4. The special programs of national groups and of other NDEA Titles are having increasing effects on Title III activities. The Traveling Science Teacher Program of the National Science Foundation, the work of the Physical Science Study Committee at M.I.T., and the activities of the Modern Language Association and the professional groups developing materials and approaches in mathematics are all cases in point.

Title VI institutes for language teachers are affecting Title III language studies.

What does the future promise in Oregon? For the audiovisual field, as well as for the entire Title III program, the greatest development still lies ahead. How fast the tremendous potential for AV development will come depends very largely on the effectiveness with which audiovisualists work *at the local level* with persons in the subject areas and with school administrators. It is beginning to be widely recognized that the AV person can be most helpful and effective only if he participates in the basic planning for the improvement of instruction, but he won't get this opportunity if he has not shown his value and indicated that he is "ready, willing, and eager." Although few school districts in Oregon have a full time AV person, effective work is being done by many Oregon AV persons who spend part of their professional time in this area.

The most interesting AV developments may well come in the field of language instruction. Much careful and cautious development work is under way in Oregon to fit essential equipment into the patterns of function required at the elementary and secondary level and by various local circumstances.

The development of locally-prepared materials uniquely adapted to Oregon needs or filling poorly-supplied needs for visualization in various content areas is also receiving more attention.

In Oregon, then, Title III has:

—Had a strong catalytic effect in bringing about new activities of great promise;

—Brought about the expenditure of large sums for the special equipment teachers need to improve instruction;

—Focused attention firmly on the audiovisual media as essential and important tools which should be an integral part of instruction.

Undoubtedly, what happens as the Title III promise becomes progress and then performance will have a marked effect on the future course of education in the state.

# DAVI and the Future

by Robert C. Snider

**T**HE future of the audiovisual movement and the future of American education are so closely joined that it is difficult and perhaps futile to consider their futures as isolated entities.

Today major changes are taking place in American education and all of these changes will directly influence our own field of audiovisual instruction. Although some of these changes have been developed and pioneered in schools by audiovisual specialists, many of them are changes that have germinated elsewhere and are growing to have considerable effect on audiovisual instruction. More and more audiovisual directors today are concerned with problems of adapting new technological developments to the teaching-learning process.

Whether we in the audiovisual field have been leaders or followers in our relationship to the total educational movement is basically an academic question. The important point is that we are an integral part of the teaching profession. Our future role as leaders and specialists within this profession can only be predicted in terms of how effectively we are able to relate ourselves to this profession and to new developments within this profession. In relating ourselves to the teaching profession, we have an increasing responsibility to serve as a bridge between technology and teachers.

Since it was established 36 years ago, the Department of Audio-Visual Instruction of the National Education Association has been building on a solid foundation, for it is a part of the teaching profession and in recent years its growth has been phenomenal. In the past decade DAVI has become a firmly established, autonomous department of the NEA with its own annual national convention, its own periodicals and a membership that is rapidly approaching the 5,000 mark. (During the past nine years, DAVI membership has increased by more than 400 per cent.)

An excellent liaison between DAVI and the teaching profession exists in a working relationship between DAVI staff members and the total NEA headquarters staff in Washington. The executive secretary and others on the DAVI national staff also serve as staff members of the NEA Division of Audio-Visual Instructional Services. This NEA headquarters unit has two basic responsibilities: to promote the effective use of audiovisual materials in the schools of the United States, and to provide audiovisual services to other NEA units.

Because of its relationship with the NEA, our

professional audiovisual organization has an open channel of communication with the teaching profession and its many units, making possible a rapid and efficient mutual exchange of information. As an NEA department, DAVI, of course, is able to work directly with the 700,000 NEA members as well as with the other 29 departments, 13 divisions, and 26 commissions and committees. These combined NEA units, incidentally, are the largest publisher of educational materials in the world, a fact of some importance to DAVI.

DAVI uses two important means of informing its members of new developments in education, its publications and its conventions and conferences. A good example of the latter is the forthcoming national DAVI convention at the Netherland Hilton hotel in Cincinnati, Ohio, February 29 to March 4, 1960. With its theme, "Concentrating Educational Forces," this convention is expected to attract 2,500 people to hear such speakers as Ernest O. Melby of Michigan State University and John E. Ivey, president of the recently-established Learning Resources Institute. An added attraction will be more than 115 commercial product exhibits including such new developments as teaching machines.

**E**ARLY in 1960 DAVI will publish a significant volume, *Teaching Machines and Programmed Learning: A Source Book*, edited by A. A. Lumsdaine and Robert Glaser. DAVI's decision to publish this collection of major papers is a result of the great interest its members have in the two concepts mentioned in the book's title. And this interest on the part of DAVI members may well be a guidepost to our future.

In a recent paper on technology and the instructional process, James D. Finn, president-elect of DAVI, refers to what he sees as the coming role of the AV director in relation to teaching machines and programmed learning:

"It is my position that the audiovisual field is in the easiest position to help integrate these mechanisms properly into the instructional process. They are not primarily audiovisual; they are primarily technological. The audiovisual field, I think, must now suddenly grow up. We, the audiovisual specialists, are, of all educational personnel, the closest to technology now. We must, I think, become specialists in *learning technology*—and that's how I would redefine audiovisual education."

You may or may not agree with Dr. Finn. Whatever your opinion, DAVI has a forum for it. The future of DAVI is the future of the audiovisual field, and your active participation is needed in both.

# Educational Television

by Harry J. Skornia

THE past year has been an encouraging one for all who are interested in educational television and all modern media. I think it has been equally interesting for all who are interested in the pressures which the entire educational community is feeling in the United States.

In a sense I feel that American education has been made the "fall guy" for the "educational mess" we're in, to quote many hysterical and otherwise irresponsible critics.

Since education in the United States is responsible to *local* pressures, instead of being controlled by a Ministry of Education or some comparable central body as it is in many countries, the United States public, critics and others cannot fairly blame the educators, as "the others" in this situation.

It does, of course, raise a question of the *total* problem democracy faces at all levels: that of the responsibility of those in charge of *any* critical part of our nation's organic system, in the face of "public" pressures. Should school administrators have yielded to public pressures for more vocational, "adjustment," and similar courses? Or should they have stood by their guns, and insisted on more disciplined education in the basic (science, humanities) sense? Or in insisting on getting through to the students the fact that they must continue to study and learn all their lives as if their very lives and freedom depend on it—as they do?

Is a review of this type of responsibility *generally* not in order—not only in education but everywhere in our culture? By whom were the public pressures exerted on education shaped during the years when it was becoming "a mess," if not by our mass media—newspapers, radio, television, movies, and all the rest?

We now are beginning to suspect that many of the concepts, values, and "lessons" which these media have been conditioning the public with may not necessarily have been so good after all. But we have not yet begun to raise adequately the question as to whether the value systems transmitted by these same media regarding our economic and social systems (constant inflation, etc.) may not be as out-of-step with our times as our education system has been. What is education's role in this area?

If commerce-operated mass media continue to assume in these areas, as they did in the case of education and science until Sputnik and Lunik came along, that ours is "the best possible system," how long will it be before the economic, social, and social science equivalents of Sputnik and Lunik will burst above our heads?

If sponsored mass media do not show concern in these areas, educators and educational uses of these media *must*. I see this as a more serious function of educational television, the other new media, and education itself, than any of the experiments in detail or methodology which we now hear about.

Education may have abdicated its responsibility *once* under public pressures and tastes which were shaped by industry-financed uses.

Has it learned a lesson from this? Have we learned a lesson as part of this educational structure? Education (which includes you and me) must have the courage to resist such pressures now, as the last bastion of truly basic (not applied) analysis of education's function and responsibility in a republic, now that all types of media are available to it.

I believe that some evidences of such awakening are occurring. That is why I began this article by saying that I am encouraged. Humanists are finding support in their insistence on the need to develop the spiritual, intellectual, and philosophical man as well as the scientist and the technician. Some are having the courage to say that we should study languages, as many as possible, in order to understand our world better, and take wise decisions on the basis of this new understanding—rather than only to *speak* the language, or use it to keep from getting "gypped" as a tourist, or as a technical skill to enable us to earn lots of money in a foreign country.

In the early days of educational television most of the money came from Foundations. This was good as a catalyst and means of getting education started in the use of new tools. It is not good if its uses are directed too much by Foundations instead of by education itself. Here, too, there is evidence that the educational community is awakening, and having the courage to say that tax money is what we need—that if we want better education we as taxpayers must pay for it. Many are having the courage to take issue with Foundation projects themselves in many respects. This, too, is good. Let us be grateful to the Foundations for prodding such educators into concern and activity.

# education

Finally, some are even beginning to say that more money is not necessarily the answer to all education's problems. If America can learn that money is *not* the most effective force in our lives, and in the world, we will have gone a long way. But education must stubbornly and courageously believe and teach this if we are to avoid "cheap and dirty" solutions to complex problems.

I do not believe that in educational television we have any panacea for education. Put me down as old fashioned if you like; for I do not personally believe that learning can ever be "made easy" in the sense that many people mean. I believe that many of our learning theories are no doubt antiquated. I believe each of us can learn enormously more than we have so far thought possible. Educational television and all sorts of new media can contribute greatly if used right—in an integrated approach—rather than elbowing each other aside. But I believe that learning is essentially discipline (mostly self-discipline). Just as great sportsmen can find no substitute for rigorous conditioning, body-stretching, painful straining beyond capacity—moving the threshold ever upward—so I believe that good minds and clear, analytic thinking, can be realized only in the same way.

**I** THEREFORE am not particularly interested in "how easy television makes it." I am not even interested in what television does to or for teaching as such. What does it do to and for *learning*? And by learning I do not mean the amassing of facts or odd bits of information. We are confused enough already. The plethora of "facts" in an unrelated jungle of confusion is a large part of our problem. What can educational television contribute to seeing cause and effect relationships? What can it do to identify and clarify forces? What can it do to develop intelligent and rational decision-making in an age when our rational side is all too often by-passed?

It is at this point that I would like to take issue with many who feel that television alone can teach this sort of thing. Only practice under supervision, can do this. I know of no way to ferret the irrational out, and get at the rational basis of a principle, other than discussion. And by this I mean discussion in which the learner—the apprentice or disciple—himself participates.

I am not too worried about the fact that "students can't ask questions" of the television teacher. Most of the kinds of questions most people are

thinking of will not be sorely missed. It is dialogue (in the Socratic sense) that I mean—and that is something which the efficiency of television in providing demonstrations, or transmitting facts, or providing contact with great teachers, to serve as a basis of such dialogue, can enormously contribute to.

Printing did not replace the classroom. Neither did films or radio, thank heaven. Neither, unless we lose our sanity, will television—at least at those critical ages of students when the young minds are curious and idealistic and needing to be guided and tested and challenged and given rough knocks.

Perhaps the advent of television will cause us to study media as media—and cause us to have, finally, courses in all the media to which humans are subjected in our culture. Education has for thirty years sat passively by, arming students to recognize (and even here imperfectly) phoniness and irrationality only in the print media. The offense (commercial and manipulative uses of these media) in electronic media has gotten far ahead of the defense (the listener or viewer). Education has too long been blind to this responsibility. It can no longer be. It must, finally, take an overall view of what happens to the students when placed in contact with other minds—through whatever media is used.

Here, too, there is evidence that such an awakening is occurring.

I believe that the entrance of educational television on the stage of education has been so dramatic and has brought with it both so many promises and so many threats, depending on the persons or groups who judge it, that it is, right now, causing the hardest look at education itself that has been given it since perhaps the days of Rousseau—and his efforts to equip his imaginary student, Emile, to meet the problems of the world he would have to live in. This, in fact, may turn out to be educational television's greatest contribution.

But the wise uses to which television must be put, must be tempered uses: uses tempered by an awareness of its great power, and its great dangers, as well as its great promise. How well these uses emerge depend in large part on the courage, imagination, integrity, and effort that all of us—who claim or aspire to exert influence in its uses—display in these exciting days and years.

# A Year of Achievement For NAVA

by W. G. Kirtley

In a recent speech, Charles A. Percy, president of Bell & Howell Company, referred to the audio-visual industry as occupying a unique position as the communicative link between businessman, educator and citizen. He charged the industry with a responsibility for helping to alert the nation to its educational needs through a "great crusade" to eliminate the "crisis in education." Since that address, the industry has formally agreed to accept Mr. Percy's challenge in a resolution unanimously passed during the 1959 convention of the National Audio-Visual Association.

This voluntary action by practical businessmen to contribute of their time and money for support of a program to benefit our nation in general and education in particular, well illustrates, I feel, the warm relationship between the AV industry and one of its major customers: schools. The spirit of teamwork that exists between our industry and the educational field is actually quite extraordinary, something altogether foreign to most essentially commercial relationships. Yet, in many ways, its effect has been of great practical value both to the educator and the AV businessman.

Glancing back over the past 12 month period, a number of instances of cooperation come to

mind, accomplishments realized through team effort by businessmen working closely with leaders from the field of education. As the year now draws to a close, I think it would be well to review some of the progress we shared during 1959.

A few years ago the areas of new teaching aids were deemed "non-essential" by the White House Conference on Education, a heavy blow to our industry and the many forward-looking educators and educational administrators who foresaw the dramatic role that newly developed and improved teaching aids could play in improving teaching. Together with educational organizations, the National Audio-Visual Association launched an exhaustive program aimed at only one objective: gaining proper congressional appreciation of the potentials of new educational media, and reflecting this awareness by appropriating the necessary federal funds to make these teaching aids accessible to schools across the country.

The success of this effort has amazed even those who were intimately involved in achieving it. The United States Congress reversed our national attitude toward new educational media. Audiovisuals were rightfully lifted out of the "frills" category, and the National Defense Education Act is now making a great variety of new teaching aids a vital part of the teaching profession.

Anyone familiar with the red tape-clogged wheels of legislative process is aware of how slowly these wheels normally turn once an act has actually been passed. Therefore the next major goal of NAVA was to help implement NDEA. It became urgent that everyone who would be concerned with new Public Law 864, both industry and school people, understand it fully. And it was important, once this understanding was accomplished, that the appropriated funds would be made speedily available.

Our industry established an Educational As-

59/60  
REVIEW FORECAST

W. G. Kirtley

sistance Fund to serve this purpose. Thirty-six manufacturer and producer members and 37 dealer members of NAVA contributed a total of about \$27,000 to finance a number of urgently needed projects. Among these was the publication of "AV-864," a handsome booklet which explained clearly and simply the audiovisual provisions of the new law. Some 65,000 copies have been distributed.

Representatives of our association called upon 46 state departments of education for the purpose of offering advice on their state plans, to help speed up their submission and to make sure that adequate AV provisions were included. Again, this activity was financed through the Educational Assistance Fund.

Quick team action was called for last March when the House Appropriations Subcommittee, which had considered P.L. 864 appropriations, unexpectedly recommended that no money at all be appropriated for any of the audiovisual sections of the act. Within twenty-four hours of this jolting announcement, NAVA had contacted 1200 of its members and AV personnel in the educational field via air mail letters and telegrams. Other groups took similar action. Reaction was swift. The move to cut the appropriation was decisively beaten on the House floor.

During the year, the audiovisual industry, through its Association, has continued to participate in the Audio-Visual Council on Public Information. NAVA handles the physical production and shipping of council publications such as "Gateway to Learning." To date, 200,000 copies of council publications have been printed and distributed. The council now has another

project nearing publication which will be of great value to everyone concerned with educational audiovisual programs. The late Dr. K. C. Rugg of Indiana University completed just before his death a booklet entitled "Budgeting for your Audio-Visual Program." This publication will present the budgets of good audiovisual programs, the ones which are well financed, in school systems of different sizes and localities. It will serve as a model for school administrators to follow and adapt to their own school systems.

Though the Murray-Metcalf school construction-teacher salary bill has thus far failed to pass in Congress, it is nevertheless significant that through an effort which NAVA spearheaded, the bill carries an amendment to include instructional materials and equipment. This further establishes precedent for the position that audiovisual provisions should be in any Federal legislation relating to schools. The McNamara school construction bill, S. 8, includes instructional materials and equipment as items which can be purchased. The AV industry has in the past, and will continue in the future to ardently support these and other measures which promise to strengthen our educational system.

As schools become more and more "laboratories of learning," the importance of aids and materials grow in proportion. Vigorous effort must be exerted to provide assistance and services to all users of audiovisuals to see that these newly acquired tools are properly and effectively utilized. Herein lies the greatest challenge facing audiovisual businessmen and educators as we look to 1960, the beginning of a new decade of opportunity.

# EFLA in 1959 and in 1960

by Elliott Kone  
and Emily Jones

Probably the best word to describe EFLA's reaction to the past year is "breathless." While maintaining the regular membership program of evaluation cards, bulletins, Film Review Digests, information service to members and others, and such other activities as conferences, film distribution, and publication sales, EFLA organized and presented its first American Film Festival. The Festival has been well reported in the audiovisual magazines and by word-of-mouth from those who attended, so it seems unnecessary here to give all the details. However, a few statistics may be in order.

Film entries for the festival started coming in early in November. When the dust cleared away after the official closing date on January 20, we found that we had entry forms for 442 16mm films and 149 filmstrips. Thirty-five pre-screening committees sacrificed their time and eye-sight to rate the entries during February, and from their report, 250 films and 80 filmstrips were selected for showing at the festival. Since each of the committees contained at least six people (some had more) the number of volunteers involved in the pre-screening procedure was about 200. The festival itself took place at the Statler Hilton Hotel in New York on April 1-4, 1959. About 500 people registered, and many of them came back on succeeding days. Ten screening rooms were going full blast for three days and three rooms were used for the final showing of award-winning films on Saturday. Blue Ribbon Award trophies were given to 45 films and filmstrips at the award banquet on Friday night.

The reaction to the festival has been overwhelmingly enthusiastic. A number of suggestions for improving the rating system have been made and there were the inevitable laments from those who found two films they wanted to see running at the same time. But considering it was a first effort, it was remarkably successful, and far exceeded the modest expectations of the EFLA staff. Perhaps the most gratifying aspect of the Festival was that everybody seemed to enjoy it.

After-effects of the Festival are still being felt. One of these is a widening view of the scope of the 16mm film. EFLA has always interpreted the "Educational" in its title to mean education in the broadest sense, but there has been a tendency to assume that we are concerned only with classroom films. A look at the list of 32 categories and five major areas of interest in the festival should dispel this idea. Education and Information, Art and Culture, Religion and Ethics, Health and Medicine, and Business and Industry are major areas, in each of which EFLA has an interest (and members); and the festival not only dramatized that fact, but also stimulated the flow of information from one field to another.

EFLA's role in the whole audiovisual field is basically different from that of any other organization, simply because it does cut across the boundry lines. There are organizations dealing with audiovisual programs in the schools, the public library, in the churches, in industry and many other areas. These groups work intensively within their own fields and their work is invaluable. But EFLA's program and interests are extensive—covering all subject areas in dealing with

the film as a medium of communication.

Since its beginning in 1943, EFLA has stressed two particular parts of its program: the critical appraisal and evaluation of films (all films) and the problems and techniques of administering a film library (any film library). Selecting materials must, of course, be done by people who know the area in which they are to be used—but the principles of selection and evaluation remain the same for all groups. Getting materials to the users, whether locally, regionally or nationally presents similar problems, whether the films deal with elementary arithmetic or advanced international affairs. It is in service to all film users, in appraising all kinds of films and in encouraging high quality work by all film-makers that EFLA's future lies.

What about the immediate future of 1960? Well, EFLA is now gathering its strength and preparing to plunge into the Second American Film Festival to be held at the Barbizon Plaza Hotel in New York on April 23-27, 1960. The same general pattern will be followed, but there will be a number of changes—we trust for the better—in the rating and scheduling. Most of these are based on suggestions from those who attended the 1959 festival and took the trouble to tell us what they thought. There will be more opportunity to meet informally with other film-makers and film-users, more coffee hours and more discussion sections. Pre-screening committees will be urged to maintain higher standards so that only really qualified films will be selected for festival screening. There will be fewer conflicts in scheduling films in the same general area. The filmstrip rating system is being revised. But even the most optimistic member of the festival committee does not really expect that all problems will be solved and all objections overcome in 1960 or any other year.

All festival and no program would make a thin audiovisual year, so any members who may have feared that EFLA would get so involved in Jurors and Awards that it had no time for anything else are hereby reassured. Immediate plans call for more evaluations, more Bulletins, more Film Review Digests, plus two or three special service supplements during the coming year. The new *Index to EFLA Evaluations*, just off the press, lists by subject and title the nearly four thousand films which EFLA has evaluated so far.

There are two areas to which EFLA plans to give special attention in the coming year. One is a major revision of its whole schedule of meetings and conferences. With the festival taking the spotlight as the major event of the year, the EFLA board is planning a series of regional and specialized conferences. The Southern regional meeting in Florida, which was so successful in 1958, will be repeated in 1960. Other areas suggested for regional meetings are Midwest, North Central and Pacific Coast. Special workshops and conferences with groups using films in the public library, church, industry and other fields are being considered.

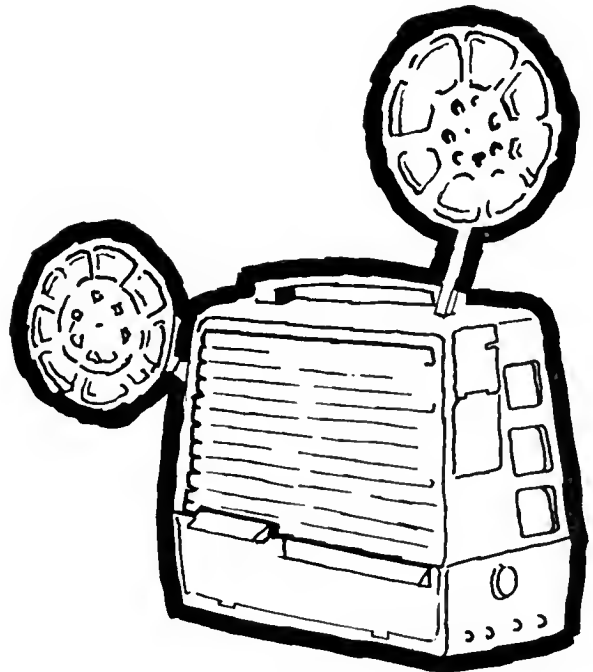

The other major project is to apply EFLA's long-standing information and evaluation services to the complete and detailed study of audiovisual materials in one particular area at a time. First on the list at present, of course, is Science,

and plans have been formulated for this project. The experience and cooperation of the approximate work on the regular evaluation project will be invaluable in making special studies of this kind, but additional office staff will also be required, as well as funds for printing and distributing the information if it is to be of maximum usefulness.

So 1960 will be another busy year for EFLA, as well as for the audiovisual world at large. But if it fulfills its promise, it will be also a year in which the horizons of that world are expanded as more groups and more individuals discover the tremendous variety of 16mm films and the ways they can be used.

What EFLA can do in the immediate future is only a small part of what is needed, but with 1959 behind us, we feel that we can look forward to a busy, useful, and probably—again—a breathless 1960.

# AV Education in the Church

by George B. Ammon

Slow but significant progress has marked the use of audiovisual materials in the church during the past few years. Audiovisual progress has been slow partially because of the conservative nature of the church and church people, but it has been significant largely because the image of audiovisual education is changing within the church itself. We are beginning to see both the true potential of audiovisual materials as tools for specific purposes, and their inherent limitations—plus those engendered by many largely untrained in their use.

In the past several years serious efforts have been made to move from an unimaginative use of audiovisuals shown largely for seasonal "programs" such as at Christmas and Easter time, to a more carefully thought out use of all kinds of audiovisual materials in connection with educational, missionary, evangelistic, and stewardship purposes of the church. Many more teachers are taking the audiovisual tools as tools, and developing skills in using them. Until recently many church leaders used only films or filmstrips or other visual materials which were patently religious, today they draw on audiovisual resources from a wide spectrum of subject matter.

The sobering complexity of the learning process has made church leaders aware that audiovisuals play a significant part along with other teaching methods such as discussion, role playing and problem solving and that audiovisual education operates best in concert with other types of teaching. Audiovisuals are not automatically educative, and standing alone, are often ineffective.

There is considerably more denominational guidance material offered the local church as to what to use in connection with the specific Christian enterprises at the local level. Significant audiovisual listings have been prepared by denominational audiovisual specialists in connection with Sunday church school, weekday and vacation church schools as well as in missionary education, evangelism and stewardship education. We are learning how to help teachers of specific age groups work more effectively with audiovisual materials. Furthermore the audiovisual producer is beginning to define his target audience more clearly and even the distributor is beginning to help the user select his material more purposefully.

Within the local church, audiovisuals have become somewhat familiar today. We recognize the film and filmstrip as an adjunct to the teacher's tool kit. We are more likely to use these materials in a somewhat unobtrusive manner today than ever before.

We are beginning to realize that the Bible is difficult to visualize. In fact, it may be that possibly some parts of the Bible should not be visualized in such form as film or filmstrip. This is partly because of the high cost of doing a creditable job plus the fact that it is exceedingly difficult to visualize oriental imagery, parables and miracles without doing a disservice to the meaning and dynamic of the Scripture itself. In some respects the most recent attempts at film treatment are worse than those of ten years ago. Some of the efforts suffer from the poverty of wooden char-

acterization, unimaginative direction, and poor scripting, along with mediocre make-up and crude special effects.

We are encouraged by recent statistics which claim that 85 percent of all Protestant churches now have one or more pieces of audiovisual equipment. These statistics show that the larger the size of the congregation, the more certain we are to find audiovisual equipment available and being used. Fifty-one percent of our Protestant churches have record players, 64 percent have slide and filmstrip projectors while 64 percent have motion picture equipment. Generally this is a good sign but may also tend to put everything audiovisually into a neat package, and cause us to depend too heavily on the package.

The creative audiovisual user is now beginning to push beyond the use of the motion picture and filmstrip projector to such equipment as the opaque projector, the tape recorder, the overhead projector, and the 35mm and the 16mm camera.

Recently introduced into the church field is the use of such equipment as the Viewmaster projector with its circular reels, each reel carrying 14 pictures of 16mm stock. This kind of simple inexpensive equipment along with a less expensive well-engineered, exclusively filmstrip projector, designed especially for use in the typically small church school class, are some developments which are moving in the right direction.

A new development which portends much good for the future of audiovisuals in the church is the plan to limit the upcoming 1960 International Conference on Audio Visuals in the Church (at the University of Colorado in Boulder next summer) to national or international staffs of the denominations, plus interdenominational leaders and a limited number of regional representatives. This conference, heretofore open to local church leaders, will thus be limited and will plan various state or regional audiovisual cooperative training enterprises, using national, regional or area leaders to help get the AV know-how to the local congregational level.

The present NCCC Commission to study the church's opportunity and responsibility in relation to the mass media is currently delving into the place of television, radio and the film and promises some audiovisual help "at the summit."

## Through the Looking Glass —To Tomorrow

The past year has been marked by an explosive growth in the number of secondary schools and colleges expanding their foreign language offerings and expanding, too, the technical facilities for such studies. Recent surveys indicate the number of language laboratories in service as more than 300—with more than 60 of these in sub-collegiate institutions. Colleges report language enrollments increased by as much as 36 per cent with new demands for languages other than the usual Latin-French-Spanish-German group.

Foreign language accomplishment, recently in the 'recommended studies' group for college entrance, is again being made a requirement. Columbia College recently announced that, beginning as soon as 1962, a requirement for admission will be completion of at least three years of study of one foreign language in high school. This is not an isolated instance but is part of a trend.

And the emphasis will be on communication, not rote learning of words out of context and dull and unexciting rules of grammar. The College Board examinations will include aural comprehension tests in French, German and Spanish. Similar in objective will be the revisions of the English examinations which will include testing in composition.

### Role of Listening

Communication as a vital function of language, then, is becoming dominant and listening, perforce, becomes integral in modern education. The current emphasis on audio and audiovisual entertainment via motion pictures, television, radio and recordings heightens the need for this emphasis—but it has been a generation coming, and comes coincident with the sudden public realization that our relations with the world depends on successful communications.

The past year has seen, too, a sudden but anticipated growth in the variety of foreign language records marketed. No list of foreign language recordings, however recently publish-

ed, can be 'up-to-date' for more than a few months—or even truly 'recent' for more than a year—because the variety of available materials is so rapidly expanding.

The pressures bringing this about are, of course, the growth in the number of foreign language laboratory study courses available to secondary school and college students, and the impact of the National Defense Education Act on audiovisual budgets in the language study area.

The mirror shows phenomenal growth, and the rear-view mirror indicates, too, that language studies are not alone in this.

Looking through the glass to the year and years ahead, it is reasonable to predict that we are at the beginning of an era of tremendous new emphasis on being able to communicate—to receive as well as offer information through the senses of hearing and seeing. The laboratory, as it has been introduced into foreign language study, will become integral in other areas beginning perhaps in English both as a language and as a humanities study, and progressing then to other humanities, the arts and finally to the sciences. It is not inconceivable that the expressed goal of so many educators will become a reality: that the student be encouraged and permitted to progress through the maze of his studies at

his own gait, pausing to seek depth and breadth as interests and needs indicate. It is not inconceivable that through the audiovisual devices used by individuals and by groups however small the pressing needs of the intellectually gifted may be met. And, too, the lagging student may be helped to progress at his own pace through directed listening and other study experiences.

It is always interesting and informative to know who is active and interested. A 'man in the street' survey is impossible but a 'letter in the mail' study is not. So, with this particular year-end summary and look ahead in mind, we made a simple tabulation of correspondence over the past few months. We have heard from a variety of places—from most of the states and from European and Asian nationals. The bulk of our correspondence is from schools and colleges, as might be anticipated, with schools and school systems accounting for about 48 per cent and colleges and universities 33 per cent. The rest is made up of miscellaneous adult groups including public libraries—almost a fifth.

### Av Directors and Centers

When the same information was tabulated another way, it was learned that audiovisual directors and audiovisual centers, including curriculum materials centers, account for 63 per cent of the mail—almost two thirds. These are the professional audiovisual specialists, these are the professional educators outside of libraries. But librarians are asking questions, too, and almost a third of our mail comes from libraries other than school and college libraries. There is, of course, a smattering of letters which can only be described as 'miscellaneous' and

**Audio CARDALOG — Box 1771, Albany 1, New York**

**— A WORLD OF SOUND ON FILE —**

may come from individuals seeking information, from record producers and from the tremendous variety of other sources (including school children!) who want to know about sound.

What do they ask? The questions almost all concern the area of materials. The most complex may involve preparing a list of recordings for a college course in Shakespeare, and the simplest the "where can I secure?" involving the record distributed only by a single source. Many people seek lists for intensive work in a limited area. One elementary school principal wrote that a student was entering a hospital for delicate eye operation and he sought assistance in selecting appropriate entertainment and instructional recordings for the child.

Of course there are questions about equipment but these are decreasing in

number. The multi-speed record player is a well-known machine today. The argument of 'tape versus disc' is frequently joined. Then too, we are repeatedly admonished that (a) the eye is faster than the ear as a receptor, and (b) the car is faster than the eye as a receptor. The argument over relative retention, too, is not uncommon.

### No Help to These

There are some people we cannot help. These are the schoolmen who have received (as a gift) an almost complete set of 78 rpm records published in the pre-war years. They seek the one (almost always unavailable) record to fill out the album. Unless the title has been rerecorded and reissued we find it best to suggest substitutes.

Looking ahead we can anticipate

many interesting developments. The concept that involves a lending or rental library of recorded material for 'one time only' use is already in practice. But the future may well involve a large leased library constantly available in any given school or school system.

The Keats Record Company (127 Bedford Street, Stamford, Connecticut) already offers a record service for public libraries at a monthly fee. In this service a permanent collection of LP records is shipped to the subscriber at the beginning of the service period. This initial shipment forms the basic collection which remains in the library as long as the service is retained.

Additionally, new records are constantly supplied to the contracting libraries. Libraries are encouraged to request specific recordings to be included in the regular shipments which are sent. The record owners—the lending source in this case—replaces worn and mutilated records as an integral part of the service on advice of the library. It is important to note that title remains with the original lessor and not with the library.

Cannot a similar program be developed for schools? Is it impossible that schools lease record collections and pay on either an annual or monthly basis? In this case, cannot an enterprising individual or firm offer such a broad service encouraging schools to select a basic library from existing catalogs and then offer additional (new or older) releases on a regular monthly or bi-monthly basis? It may not be impossible that a rental-purchase system similar to that now employed successfully by film distributors can be applied to recordings sales. The major need is for aggressive face-to-face salesmanship and for realization on the part of teachers as well as teacher-trainers that suitable audio materials enhance the learning situation and provide another source for the student's vicarious experience.

### Aural Program

And still the new records are produced with a view not only to enrichment but also to implementing learning. One of the latter is *Pathways To Phonic Skills* (Audio Education, Inc., LL-3; 55 Fifth Avenue, New York, N. Y.). This is an aural program for developing and extending phonic readiness skills, basic in beginning reading. The recordings are particularly designed to accompany Volume I of *Betts Basic Readers, Second Edition*, but their usefulness is not limited to these particular texts.

The records (there are two 12-inch 33.3 rpm discs in the set) deal with such topics as "Hearing and Identifying Sounds," "Discriminating Between Sounds," "Hearing and Saying Rhyming Words," "Naming Pairs of Rhyming Words," "Classifying Sounds," "Saying Words that Rhyme," "Listening to Rhymes," "Completing Riddles," and sections devoted to hearing vowels and consonants as well as the endings and the beginnings of words.

The material contained in the two recordings is sufficient for long term use with most students. The work cannot be completed without repeated listening over a long period of time, and slow progress is indicated.

### Intended for Young

Generally, the recording will be useful with the kindergarten and first grade children for whom it is intended. It seems rather important that the listening children have had a broad background of experiences so that they may be able to recognize and identify 'city' sounds as well as 'country' sounds. Volume, important in sound discrimination and distance judgment, is constant rather than varying in this recording. Further, some of the sounds employed—such as the

sound of a steam locomotive—seem to "date" the recording too much. Perhaps most first grade children have never actually seen or heard such an engine but here television comes to the rescue, for the experience of both seeing and hearing is probably theirs through TV.

We had hoped that there would be many simple stories told in sound on the recording—and but two are provided. Sound used this way can contribute markedly to the child's developing perceptive abilities as well as to his oral self-expression. From the technique demonstrated on the record, however, it is possible (and desirable) for the class and the teacher working together to create their own simple "stories in sound" and to record these on the school tape recorder, developing the working together concept for their own amusement, comprehension and fuller involvement in this aspect of communicating ideas.

This is an especially interesting area: the introduction of children to interpretation of sounds at an age when they are being first introduced to them. This greater facility in evaluating sounds can contribute to a child's enjoyment of the world he sees unfolding about him and possibly to a quicker ear in languages.

# In the Church Field

by William S. Hockman

## Notes And Comments

We believe that the churches, all denominations, can get a lot of good use out of the 13 films which were used on the Methodist "Talk Back" TV series. Now released to all churches, these films cover such subjects as the pressure of modern living, guilt, knowing God's will, life's good and bad breaks, prayer, Christian business principles, suffering, civic responsibility, anxieties and fears, belonging and acceptance insecurity, the rearing of children, etc. Here is material for youth and adult groups, in and out of church. To get the most juice out of them, try the discussion process. Book them through your A-V library, or the Methodist Publishing House, Nashville, Tenn.

- It is just possible that Mr. Alan N. Camp, secretary of the Audio Visual Aids committee of the Trinity Baptist Church, Bexleyheath, Kent, England, would have an extra copy of the committee's annual report for 1958 on hand. If so, he would, I am certain, be glad to send it to those who would like to see how and why films and other media are used in this parish. In turn, he might like to hear from you and have your report—if you have one to send along.

- We have already made note of two films which we will use the next time we teach a course—at the college or university level—in A-V communication and use. "Facts About Film" says a lot and shows more; and "Facts About Projection" wraps up that subject interestingly and well. Come to think of it, these two would be equally useful in institutes, seminars and conferences with the people who actually use films in the various programs of the church. They speak to the needs of this group, too. From International Film Bureau, 57 E. Jackson Blvd., Chicago 4, Ill.

- We would like to see the Methodist Church (Board of Temperance, 100 Maryland Ave., Washington 2, D.C.) try putting the commentary of the

film "What You Ought To Want" on either tape or records, or both, and offering Bishop Oxnham's penetrating discussion in this medium. We found the film tiring, but liked mighty well most of what the Bishop said. I think that in this case a good audio would have been better than a poor film. Dynamic as the Bishop is, 14 minutes is a long time to look at him via film. (Film rents for \$5.00.)

- Family Films, Inc., has been getting into some tough subjects of late, tough enough to stump any producer. Think of a film that shows Christian youth helping another young person to get headed in the right direction! Yet "Teenage Witness" is good enough to be accepted by youth and their leaders, and is thus a useful film. "Teenage Code" deals with cheating, a subject not quite so hard to bring off. Yet it's no easy matter to make the Christian point of view acceptable in a film for young people. We think this film succeeds. If the young people of a high school respect one of their fellows for his scholarship and manly character, can he influence them in the direction of Christian ideals and ideas? "Teenage Challenge" says yes to this question and in such a way that young people of Junior and Senior Hi age will accept it. Each is 30 minutes; B&W, \$9.00 per day; and just the thing for fellowship groups and especially for the "Y" clubs in high schools and the community.

## Teenager Filmstrips

Years ago Paul Kidd (now with Family Films, Inc.) produced a series of filmstrips on the teenager and his world and its problems. Many of us used this material. We wore it out—using it! It was that good and useful.

Now Family Filmstrips, Inc., has produced a battery of good and useful filmstrips that go way beyond the old Church Screen set in quality and usefulness as well as in coverage of the general subject. These filmstrips are divided into two groups: Younger Teens and Older Teens—roughly Jun-

ior Hi and Senior Hi plus. In the "Young Teens and Their Families" there are four filmstrips, all good in content treatment and pictorial and technical qualities. They are:

*Learning To Live With Parents*  
*Getting Along With Brothers and Sisters*  
*Sharing Responsibilities At Home Allowances*

Young teens also have 'popularity problems' and we have four aspects of this problem taken up in as many titles:

*Overcoming Awkwardness and Shyness*  
*Making and Keeping Friends*  
*Trying To Be Popular*  
*What About Smoking?*

The treatment in each instance is that of good sense, solid psychological facts and good religion. They will do as much for many parents as for the young people themselves. Let us use them!

Dating, and all this implies for youth, is a tough area in which to talk sense—sense that gets accepted by the adolescent and his parents and advisors and teachers. Yet the four titles here cover the subject well, hitting the crucial questions right on the button.

*First Dates* (guidance ideas)  
*Whom Do I date?* (standard for choosing)  
*How To Act On A Date?* (what to do and not do)  
*Is It Love?* (the meaning of mutual attraction)

When you move to the Older Teens bracket (15-19) these subjects don't get any less ticklish. Older teens still live in their families. Thus a series on *Older Teens and Their Families*. The treatment is down to earth with a deep respect for Christian principles; and the titles are:

*I'm Not A Child Any Longer*  
*You And The Car*  
*Families Come In Handy*  
*Money Problems*

Older teens have popularity problems just like their younger siblings. Status and growing relationships are complex and often painful, and being Christian is not as easy as we sometimes think. Listen to these titles:

*The Crowd*  
*Smoking and Drinking*  
*My Loyalty Test*  
*Influencing Others For Good*

Excellent quality in treatment and in technical aspects is maintained in the *Older Teens And Dating* series:

- Going Steady*
- Falling In Love*
- Conduct On A Date*
- When Should I Marry?*

When I look back across these titles and remember being with a group of high school young people every Sunday night for twenty-five years, I am stirred to hope that every one of these filmstrips is seen by the parents of youth as well as by the young people themselves. In so many instances the ideas of parents need up-dating, modernizing. They so often need new insights, new tacks, new ways of dealing with their own (teenage) children. Therefore let no user think that he has really used these fine materials until he has used them with parents as well as with youth. Let no dealer forget to point out this multiple use of these filmstrips when doing business with the church. Let it be remembered also that these filmstrips can help leaders do the job year after year.

### Africa Feature Available

According to United World Films, Inc. (1445 Park Ave., N. Y. 29), that remarkable film, *The Mark of the Hawk*, which has been running in the theaters since the summer of 1957, will be available to the churches after January 1, 1960.

Having attended the premiere of this film in 1957 and having previewed it the other evening in its 16mm reduction, we would like to observe that it seems more timely now than two years ago. Again we were impressed with the professional excellence of the film. This is seen in its casting, acting, directing and especially in its dramatic structure and attention-holding qualities.

Running something over 100 minutes, this powerful film packs a message for church people as well as those outside. The image of missionary work which it develops is faithful to the Gospel and about three layers deeper than that held in the mind of so many churchmen today. It portrays the role of Christian religion in meeting the political, economic and spiritual needs of awakening Africa, and indicates that the Church is the only great fellowship that actually embraces all colors and conditions of humanity.

Without doubt any church which

will do a little promotion can gather an audience for such a great film, and if it must be financed that way, we don't see how anyone could put less than folding money on the plate after seeing such a moving and entertaining film. I don't mean ersatz 'entertainment' which drips from much theatrical stuff these days, but entertainment in the sense of being interesting because of its inherent drama. It's told straight from the shoulder, and is a 'must' for all. Don't pass this superb film by.—WSH

# FILMSTRIPS

by Irene F. Cypher

If we are to use visual materials, whether of the projected or the display type, then the pictures should be worth viewing. In our own estimation we have always used pictures for two basic reasons, (a) because they interested the eyes of the beholder and caused him to stop for further examination and (b) because, having attracted the viewer, they justified his examination and presented information he needed and would find helpful—and also pleased him at the same time. We have always deplored “busy work pictures” that contained about 50 different ideas or messages all garbled up into patchwork attempts to say a lot in one picture. For our own vote, the more any picture is edited before it is reproduced, the better.

As with any medium of communication, the basic symbols of the partic-

ular medium should be clear, distinct and understandable. Every time we see a picture cluttered up with cute little details and minute items designed to give “added interest” factors, we shudder. It would be an excellent idea for filmstrip and picture producers to take a field trip to view the display windows of many of our leading jewelers. Whenever there is a rare jewel or magnificent necklace to display it is made the center of attention and other distracting items are cleared away. It is barely possible that pupils in our classes would find filmstrips more attractive if the message of each picture were clearer and easier to identify visually.

*Tide Pool Life Study Prints* (a set of 12 flat prints, color; produced by Filmscope, Inc., Box 397, Sierra Madre, California; \$11.95 per set, reductions for group orders). In line with our general comments above, we call your attention not to a filmstrip but to a set of flat prints which impressed us so much we are including them in this column. The pictorial quality of these prints is excellent and the color splendid. We actually behold sea anemones, shore and hermit crabs, chitons, mussels and other specimens of marine life as they would look to us if we went investigating in the waters of a tide pool. And many of the pictures have an added value in providing an indication of relative size for the viewer who is not familiar with the actual specimen. We feel pleasure in recommending this type of pictorial material—which we do for everyone who is looking for good pictures to use on bulletin display boards, for general study and wherever illustrative material of an excellent quality is needed. They are good for science and nature study units and as preparation or follow-up for actual field trips.

*American Colonization* (3 sets of filmstrips and records; produced by Wedberg Associates, 4715 So. Normandie Ave., Los Angeles 37, California—“Discovery and Exploration of America,” 2 filmstrips and 1 record—\$20; “Colonization of America,” 4 filmstrips and 2 records, \$40; “Lewis

and Clark Expedition,” 2 filmstrips and 1 record, \$20). Any study of history involves a consideration of the people who helped to make that history, and that is what these filmstrips do—for they have added the element of sounds and dramatizations to the picture story. The material is coordinated so as to give a series of episodes which help us to understand the gradual development and exploration of the western lands, and the people who contributed to this. Maps are included to indicate place relationships and both art work and photographs give interest to the pictures. There is a realistic quality to the records that will appeal to student listeners. The material is well prepared, well adapted to social studies units in the upper grades and junior high school, and to be recommended because it has human appeal value.

*AudioVisual Language Training—Gloria and David Series* (14 filmstrips, color, and 14 double sided records; produced by Encyclopedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.) If your problem is beginning Spanish, here is a set of materials prepared to help you along the road. Gloria and David go to school, play, look about at the city in which they live, take a trip to the country and become familiar with colors, numbers and objects. A manual provides review questions and additional study projects. The material is so planned that teachers who have no previous training in Spanish will be able to use it, as well as their pupils who are starting on a study of this language. The picture sequences are well selected and the recordings clear and easy to follow. Recommended for beginning study of Spanish (at whatever grade this is included in your particular curriculum).

*Basic Primary Science—Group II* (6 filmstrips, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$24.30 per set, \$4.50 single strips). If young scientists are to understand the world in which they live, they certainly do need to know about the facts included in this series; why seeds grow; what causes day and night to succeed each other, how many bones you have in your body and what they contribute to basic bodily function; what helps animals to survive. There are good suggestions for first experiments dealing with chemical changes in temperature, plant life and energy. These filmstrips can be used as study progresses and in conjunction with

## SOFTBALL FUNDAMENTALS FOR ELEMENTARY SCHOOLS

Boys and girls learn to play softball, demonstrate rules of play, techniques, safety measures. A Furman production for upper elementary grades. 10 MINUTES. B & W \$60, RENT \$3.

## GOLD AND GOLD MINING

Properties of gold, its uses and value, sources. Comprehensive scenes show four types of gold mining in operation. For upper elementary, junior-senior high school social studies and science. 15 MINUTES. COLOR \$150, RENT \$7.50; B & W \$75, RENT \$5.

**BAILEY FILMS, INC.**

6209 DE LONGPRE AVE. HOLLYWOOD 28, CALIF.

many units and projects in beginning science for grade two.

*Secretarial Training* (6 filmstrips and 3 double-face, 33 1/3 rpm. records; produced by McGraw Hill Book Co., 330 West 42nd St., New York 36, N. Y.) Everyone who longs for a well-trained secretary will appreciate the value of this series—for it highlights the things so needed, how to file correctly, how to plan work and organize work, how to assume responsibility and practice good office manners. The secretary-to-be is given examples of short cuts that will make her work more efficient; she is also shown how to help other secretaries and how to plan work so that she serves the best interests of her superiors. This type of material is well suited to the needs of high school and college secretarial training classes, and provides practical help for such groups.

*The Whooping Crane* (single strip, color; produced by National Film Board of Canada, available from Stanley Bowmar Co., Valhalla, N. Y.: \$5). Great interest has focused of late on the whooping crane. Excellent and realistic paintings give us a complete story of the life, habits and living quarters of this rare bird. Because it is so difficult to study such wildlife, this filmstrip becomes especially valuable to all nature lovers and students of bird lore. This is an instance in which the filmstrip becomes a "field trip" for it takes us from Arkansas to Great Slave Lake, from the United States to Canada, to follow one of the most fascinating of stories about a unique bird. Of special interest to students would be a comment on the extreme measures taken to safeguard and preserve this vanishing species. State game departments guard them zealously, and hunters face severe penalties for killing, injuring or otherwise molesting them. To be recommended for any nature study group and for clubs and conservation societies.

## DAGE MOBILE TV brings studio broadcast quality to any classroom

Broadcast quality equal to that of professional TV studios is achieved by the Dage Educational Television System (ETS-1) . . . and it is completely mobile! Moves on silent casters through classroom doorways. Included in the system is the Dage 320-B series vidicon TV camera and console control center. The versatile 700-line resolution camera is

equipped with electronic viewfinder, hood, four-lens turret and tripod. It gives excellent picture quality, even of microscopic materials. Attractive console contains video monitors, camera controls, sync generator power supply and wave form monitor. Modular construction of console makes it easy to maintain and operate . . . accommodates optional equipment as

needed . . . will broadcast on micro-wave for intra-school networks. For complete details about the Dage ETS-1 write for our free catalog, or request consultation with a Dage representative.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## Quetico

(*Contemporary Films, Inc., 267 West 25th St., New York 1, New York*)  
Produced by Christopher Films, 16 mm, sound, color, n.d., \$200.

### Description

*Quetico* . . . a wilderness area between Lake Superior and Lake of the Woods is a provincial park bordering the United States. It looked much the same to the Ojibways and the French voyageurs as it does to the modern sportsman. The film expresses a feeling about this place through portraits of earth, water, and sky. It shows the changing moods of the seasons: snow, thaw, rain, and sun, bleakness, blossom, shadowed greenness and autumn brilliance. There are also the changing moods of the hours: misty dawn, busy mid-day, quiet dusk and howling darkness.

By following one canoeist, the scope of vision ranges from high vistas of numerous lakes and endless woods to lily pads shimmering in the wake of the canoe. Along the trip, various wild life are seen and heard. The canoeist engages in negotiating portages, making and breaking camp, fishing, cooking, and reverie.

### Appraisal

Superb color photography and an unusually well-integrated musical score are organized to develop a unified theme. Producer-director-cinematographer-editor Christopher Chapman has created a film of rare beauty that will excite audiences universally. Since the message of this mass communication can be transmitted most appropriately through pictorial representation, music, and sound effects, the short sections of commentary have wisely been limited to a total of ninety-five seconds.

With mass film audiences limited mostly to television and commercial motion picture theatres, where else would this film be shown? Either because of its subject or because of its treatment, the film should find enthusiastic use by public libraries, convocations at educational institutions, film societies, photography clubs, conservation groups, nature clubs and scouting organizations.

—Ledford Carter

## Williamsburg: Story of a Young Patriot

(*Colonial Williamsburg, Inc., Film Distribution Office, Goodwin Bldg., Williamsburg, Virginia*) Produced by Paramount Pictures, 34 min., 16mm, sound, color, 1957.)

### Description

*Williamsburg: Story of a Young Patriot* uses the fictional character of John Frye of Riverton to depict the external forces acting on patriotic Americans and the intra-personal conflicts these men faced as they struggled with the controversy of self-rule or domination by the English Crown. Activities of such pre-revolutionary Virginia leaders as George Washington, Thomas Jefferson and Patrick Henry are dramatized.

Opens in 1769 as John Frye, planter of Riverton, prepares to depart for Williamsburg to assume the House of Burgesses seat vacated by the sudden death of his father. Taking with him a last letter of complaint about Patrick Henry's repeated and radical outbursts against the Crown, the new member meets almost immediately this gentleman and, among others, Washington, Jefferson, John Randolph and William Byrd. At first the young planter is impressed, but as did his father before him John Frye begins to write home of his distaste and in time of his weariness with the constant debate caused by Henry's arguments. Soon he sees the House dissolved by the Governor because of Henry's sentiments against the Townshend Acts.

With considerable misgiving, John follows a number of his colleagues to the Raleigh Tavern where they hear Washington and Jefferson support a non-importation proposal on English goods. Despite Frye's refusal to listen any longer to such considerations, the proposal carries and the shops of uncooperative merchants are raided by the patriots. But with Parliament's repeal of all such taxes except on tea, shops are again filled with imported goods and customers. At Riverton John's wife and mother are pleased with a direct shipment of china, cloth, and other items from England.

His family urges him to run for a second term in the House, and though Frye fears defeat because of his grow-

ing reputation as a conservative, he is twice re-elected. By now John's son is ready for enrollment at the College of William and Mary, so he, his sister and their mother join the burgess in a tour of the capital. Together they enjoy seeing the general court, the governor's palace, where unicorns on the gate remind Virginians they are English, and finally the House of Burgesses. Here Mrs. Frye is concerned over her son's interest in learning where Mr. Henry sits and urges him to try his father's seat instead. As she and her daughter prepare to return to Riverton, reverberations from Boston are being heard in Williamsburg, and with the closing of the Boston port events follow one another quickly, both in New England and Virginia. What attitude is the burgess from Riverton to take? Certainly he will not join those who burn the Massachusetts governor in effigy. But neither can he agree with his aristocratic friends that Virginia has no stake in events at Boston.

Meanwhile, Lee, Henry, Jefferson and other burgesses east about for a way of protesting royal moves without again running the risk of having their House dissolved. Jefferson finally suggests a day of fasting and prayer, and John Frye, writing to his wife and his mother at home, is impressed with the unity of feeling reflected by attendance at this occasion. A later letter points out that when royal marines seized powder from the Williamsburg magazine only the mercy of God dispersed the angry mob which responded to the alarm. Then John writes of his farewell to his friend John Randolph who has decided, in light of Virginia developments, to return home to England. At last comes the momentous vote in the House, deciding how Virginia's delegation in Philadelphia should vote on Lee's resolution for independence. Still undecided on this question, John Frye seeks the opinion of his son, pointing out that a vote for separation could mean not only the interruption of his education but also the loss of Riverton, the plantation young John should inherit. But the son leaves no doubt as to his feeling when, in his father's presence, he falls in rank with the Virginia militia, then mustering near the government buildings. So in the company of Patrick Henry the elder Frye goes to the House and

there joins the other Burgesses in a unanimous vote for independence.

### Appraisal

Here is an appealing and provocative presentation of the background for revolution as it developed in Virginia during the years 1769-1776. John Frye's character and letters, delineated and written against the authentic backgrounds of restored Colonial Williamsburg, provide an effective portrayal of the times and especially of the issues faced by loyalists and patriots. The technical aspects of this production are admirably handled, with photography and music effectively integrated. Our debt to those whose restoration and associated activities in Williamsburg made possible this film is especially evident in its scenes of John Frye's welcome at Raleigh Tavern and his participation in the Day of Prayer. One could ask of vicarious experience little more than is provided here. Other sequences provide concrete illustrations of the often-affectionate relationships between young slaves and plantation children and of the increasingly divergent attitudes of the young and old toward friction with England.

Seventh and eighth graders who saw this film as an integral part of their study of the Revolution asked many questions about places, people, and situations. Older high school pupils may be encouraged to evaluate, among other things, the film's portrayal of Washington in 1769 and the somewhat unguarded words used by the minister as he preached during Virginia's Day of Fasting and Prayer. Adult as well as high school audiences appreciated this colorful production. In the opinion of the evaluation committee, *Williamsburg: Story of a Young Patriot* should produce in all thoughtful Americans a feeling of excitement and a sense of involvement in the making of basic choices—which as John Frye implies, we must face again and again if we are to remain free.

—Kenneth B. Thurston

### A Newspaper Serves Its Community

(Film Associates of California, 11014 Santa Monica Boulevard, Los Angeles 25, California.) Produced by Gary Goldsmith, 14 min, 16mm, sd, color or b&w, 1959. \$135 or \$70. Teacher's guide available.

### Description

*A Newspaper Serves Its Community* documents a news story from its as-

signment to a reporter-photographer team through its processing in a newspaper plant until the paper with the story is in the readers' hands. Publishing of the newspaper is traced with emphasis placed on significant and interesting details of newspaper operation.

The film opens in the pressroom while the narrator highlights the paper's basic functions. The scene quickly shifts to the city room where the city editor introduces himself, continues the narration, and assigns the story that will be followed in the film, the arrival of the zoo's new elephant, Jomar. The photographer and reporter meet Jomar and his handlers at the airport to gain first

hand information and pictures of the baby elephant. On returning from the airport the photographer is seen making a print of one of his pictures of Jomar while the reporter is doing research on elephants in the paper's library. At the same time a story and picture of Jomar and his mother in India is received by wire in the pressroom. Using all the information he has gathered the reporter composes his story, placing the most important facts in the first few sentences with other interesting details following. The city editor points out that while this story was being written other reporters were at work on stories of schools, movies, sports, and politics.

Some of the other newspaper jobs

Photo above illustrates LuXout DIM OUT draperies softening outside light.

Classroom audio visual light control requirements differ according to circumstances. Many prefer total BLACK OUT light control; however since LuXout led the way with DIM OUT light control draperies, many architects and engineers have indicated a preference for better student rapport through the use of LuXout DIM OUT draperies. LuXout offers both types to fulfill all light control classroom TV or audio visual projection needs.

For the answer to your light control problems, consult your LuXout Distributor or contact:

**Plastic Products**  
INCORPORATED

Department AV  
1822 East Franklin St.  
Richmond 23, Virginia

are shown—for example secretaries whose many services included receiving comic strip mats sent to this newspaper and others by mail. An artist is seen at work on an advertisement for a clothes dryer—he decides that by drawing “a yellow sun inside the clothes dryer he should make the people even feel the heat.” Advertising’s function is explained as giving people information on products they can buy.

The deadline is near, and the Jomar story and photograph are received by the city editor. After his approval the story is passed to the make-up editor who allots it and the dryer ad their space on the page. The copy-reader is viewed checking the story and writing the headline “Jomar Is Here.”

The story is now received in the composing room where a linotype operator sets the type in lines cast in type-metal. Proofs of the type are sent to a proof-reader for final checking and the approved story is assembled with a cut of the Jomar picture and the dryer ad on the page by the make-up man in accordance with the layout furnished by the make-up editor.

In the final series of sequences the page of the paper is followed from its

flat form to the creation of a curved paper mat that exactly duplicates the metal type and illustrations on the page form. Using this mat a curved metal press plate is cast from which the paper is printed. In the pressroom the plates are seen arriving on conveyor tracks and attached to the presses; rolls of paper weighing almost a ton are brought into position; ink from buckets is added to the press; the presses begin to roll slowly so the pressmen can check the run; all adjustments are made; and the order is given to run the presses at full speed. As the printed sheet comes off the press it is folded, cut, bundled, and slid down a chute to waiting delivery trucks. The pressroom sequence also briefly points out how the two-color printing operation is accomplished by showing the “yellow sun” being printed in the dryer ad.

In the closing sequence the variety of reader interests in certain sections of the paper is discussed. As the film closes the city editor receives his paper and states that he likes his job of bringing news to the community.

### Appraisal

*A Newspaper Serves Its Community* takes children on a tour of a news-

paper plant sans the noise and air of complexity often inherent in such field trips; however it could also serve as a preparatory or review activity for a field trip to a newspaper plant. The step-by-step, accurate, concise presentation never glamorizes or oversimplifies its subject or gives misconceptions of journalism terms. Its audiences are intermediate grades and junior high school English and social studies classes who have little need for technical jargon but need to be able to visualize the sequential processes in newspaper publishing. In this the film does an admirable job, but if detailed comprehension is expected more than a single showing may be required for those not familiar with newspaper operation due to the often rapid pacing of the film.

The elephant story is felt by the committee to be a good vehicle for the target audiences. A weakness of the film is that while its title and study guide claim it shows the paper’s relation to the community this is only briefly touched on as a side issue to the production process. To the additional credit of the film, however, is the lack of lengthy credits and titles, and the film substitutes the sound of presses and typewriters for mood music. The consensus of the committee was that this is an excellent film for contributing to the understanding of newspaper operation and can play an important role in English class units on journalism and social studies units on community services.

—Richard Gilkey

### A Biologue on the Life and Land of Lincoln

(International Film Foundation, Inc., 1 East Forty-Second Street, New York 17, New York) Produced by Francis R. Line, in 3–17½ min. sections, 16-mm, sound, color, 1959. \$180 for each section when purchased separately or \$440 for all three parts ordered at one time. Teacher’s guide available.

### Description

This triptych of Lincoln encompasses the whole span of his life in a somewhat idyllic manner and presents to the viewer a sensitive and, in the main, a balanced synthesis of the man and his era.

In limning the profound greatness, tragedy and pathos of this truly universal humanitarian no actors are employed. Instead, sculpture both in the round and bas relief, memorials, and restorations are interspersed with bucolic shots of the wilderness and frontier that exerted such a deep and

pervasive influence on him. This melange is further held together by an unseen narrator and a speaker who reads appropriate quotes in an effective manner—all this set against the nature and sculpture leitmotif.

Reel one, "Lincoln's Youth" in Kentucky and Indiana, traverses familiar ground and perhaps succeeds best in capturing the strength and unsophisticated homespun quality of the man. The influence of his mother, Nancy Hanks Lincoln, and his older sister, Sarah, is treated as well as his meager formal schooling and insatiable love of books. Thus, in the words of the narrator, "It was here in the frontier that Lincoln spent fourteen years of his life and it was the frontier that made Lincoln and shaped his destiny."

Reel two, "The Illinois Years," follows Lincoln from the age of twenty-one years through his election, his move to Washington and the Presidency. Here one again encounters the familiar—Stephen A. Douglas, William H. Herndon and Mary Todd. Indeed, it was Mary Todd, the Kentucky aristocrat, whose towering patience and burning ambition were a powerful factor in his greatness. Furthermore it was during these crucial years that

Lincoln took his forthright stand against the Mexican War which he branded as aggression even though it spelled political suicide. Here too, he further matured into a man of depth and compassion. Again in the laconic words of the narrator, "Lincoln left the prairie and headed toward Washington and immortality."

The final reel, "The War Years," begins with his inauguration on March 4, 1861, set against the lowering war clouds and it stresses Buchanan's failure to stem the tide of fratricide which was engulfing the nation. Throughout this taut and poignant era Lincoln was borne down with tragedy—the criticism arising from the fact that his wife's relatives were fighting on the side of the Confederacy, the death of his son Willie, the herculean prosecution of the war—yet he continued to grow in greatness, humility, and mercy. And it was from this period of his life that we draw the strongest evidence of his greatness, from his words of comfort and solicitude to a soldier's sorrowing mother to the profound heights he reached at the site of Gettysburg.

## Appraisal

Within the framework of static sculpture and monuments of often questionable artistic merit, the film succeeds surprisingly well in capturing the greatness of the man and his impact upon history. Divided into three parts which may be used together or individually, the film is chiefly recommended for use on the elementary and junior high school levels. It should be useful in providing a general background for the study of Lincoln's life. Part II should make an important contribution to developing an understanding of the life of Lincoln as it prepared him for his role as president, and Part III should especially help in developing an understanding of Lincoln's role in the Civil War. It should be noted, however, that certain areas such as the largely apocryphal Ann Rutledge episode, Herndon's view of Lincoln, and Mary Todd Lincoln's controversial side are discreetly skirted; that the legislature years are not touched upon; and that in some scenes a jarring note is a modern flag instead of the one of Lincoln's day.

## DISCOVERING SOLIDS

A series of three films applying mathematics principles to space perception.

- I VOLUMES OF CUBES, PRISMS, AND CYLINDERS
- II VOLUMES OF PYRAMIDS, CONES, AND SPHERES
- III SURFACE AREAS OF SOLIDS

Art, animation, and model demonstrations help develop formulas for finding volumes and areas of solids. Live footage shows the use of these formulas in practical situations.

Carefully produced under the supervision of Dr. E. H. C. Hildebrandt of Northwestern University's Department of Mathematics, these films meet the demands of the revitalized mathematics curriculum.

# Trade News

## Business View of 59/60

Not only are the professional and trade associations looking forward to 1960 to set a new high water mark of audiovisual progress, but many individual manufacturers and producers express the same view in their own markets.

L. E. Gillingham, director of marketing for the Altec Lansing Corporation comments on "numerous inquiries for assistance in improving the audio facilities in schools and auditoriums" from educators who "are becoming more receptive to higher quality reproduction rather than just price conscious." This applies to stereo as well as to public address equipment "of much wider frequency response."

The year 1959 was a banner year for Da-Lite Screen Company, according to its president, Chester C. Cooley—and incidentally it was Da-Lite's 50th anniversary in screen manufacture. The year saw the growth of the photographic industry into a "very important part of our country's economy," according to Mr. Cooley, and the introduction of much new and improved photographic equipment fully justifies his company's plans for further capital investment during the next five years to meet the growing demand, he said.

John R. O'Neill, sales promotion manager for the Tecifax Corporation, bases his forecasts on personal contact with many leading audiovisual specialists who attended his company's workshop-seminars in visual communication. The National Defense Education Act has stimulated interest especially in the production of materials for overhead projection, according to Mr. O'Neill. "The use of visual techniques for improved instruction will be greatly accelerated in 1960, and there will be considerable exploration of large-group instruction."

## Airborne ETV To Boom Receiver Market

Some 13,000 schools and colleges within a 200-mile radius of Purdue University may become hot prospects for the purchase of UHF receivers if a Ford Foundation-supported "Stratovision" project lives up to its advance billing. A \$7-million budget is to send a DC-7 circling at 20,000 feet to retelecast programs to a school population stretching from Milwaukee to Louisville. Starting with two UHF channels, it is anticipated that a new "narrow band" technological breakthrough will double the band capacity and possibly boost the planned 24 half-hour lessons daily to as high as 72. Special receivers would have to be purchased by the schools to handle narrow-band telecasts.

## Teaching Machines

Teaching machines about the size of typewriter and designed for individual student instruction are undergoing field testing by their developer, The Rheem Manufacturing Company of New York. They are to be made in Los Angeles by Califone, recently merged with the Rheem-Califone Co. in a reported \$1 million deal. There are Rheem

plants in 15 other cities in the U.S.A. and in 15 other countries.

## Moon Shot Boosts Sales

The midyear meeting (Oct. 13-16) of the Laboratory Apparatus and Optical Sections of the Scientific Apparatus Makers Association, was told in a report prepared by John A. Robbins, manager of Bausch & Lomb's Customer and Sales Quotas Department, that the Russian moon shot would strengthen both the demand for science instruments in schools and continuance of federal assistance for their purchase. Another committee report, by James C. Jacobson, president, Voland and Sons, Inc., stressed industry's vital role in science and science education and outlined plans for meeting the various aspects of the science instruction crisis.

## RCA Plugs Color-TV For Schools

A \$100,000 contribution to the early-morning "Continental Classroom" college-credit TV program and a special price offer on 21 in. color sets is being made by RCA in support of the first color telecast series to be included in this program. Dr. John F. Baxter of the University of Florida will teach the "Modern Chemistry" colorcast course on more than 150 TV stations. Over 300 colleges and universities will offer credit to students satisfactorily completing the course. "Continental Classroom" is telecast Monday through Friday through May 27, 1960.

## Records Via AV Channels?

Ever since their official debut on an NEA program back in 1912, educational phonograph recordings have for the most part reached the user through other than AV trade channels. This magazine lists them right along with other materials but few AV dealers push their sale. Growing recognition of the need for special sales channels to reach the school market is reflected in Columbia Records appointment of Spencer Press, Inc., Chicago, as a distributor. A similar announcement comes from Record, Book and Film Sales, Inc., New York, for the extensive educational line created by Folkways.

rights to filmstrips produced from Walt Disney cartoon subjects. Production plans also include 39 half-hour films and several series of filmstrips based on the Old Testament. A 30 percent increase in production is forecast for 1960-61 by executive vice-president, Ben B. Odell.

### Two Consumer Shows

The Magnetic Recording Industry Association is sponsoring two hi-fi consumer shows on an all-industry basis in California. The dates: Los Angeles (Pan-Pacific Auditorium) Jan. 13-17; San Francisco (Cow Palace) January 23-26. MRIA now has 46 members representing all facets of the industry, (latest to join, Columbia Records).

### 500th Videotape

Ampex announces the shipment of the 500th production model of their tape recorder—in less than two years from the time the first was shipped (to Station KING-TV, Seattle). The world's first educational videotape network is being set up with recorders on 43 educational TV stations and a tape duplicating center at Ann Arbor, Mich.

### "FilMagic" Patent Granted

U. S. Patent No. 2,908,246 was granted to two Distributors' Group executives on October 15 for a "Lubricant Dispenser for Lubricating Strip Material," tech talk for the pylon applicator of silicone fluid to motion picture film and recording tape.

### Colortape Interchangeable

RCA announces achievement of interchangeability of color TV tape recordings. Heretofore the head assembly has been stored with the recorded material so that the same head would be used for playback. Now tape made on one RCA machine can be played back on another, and even on machines of other make that hold to the same standards.

### Colonial Williamsburg Discounts

The touch of the educator "gone commercial" (without ceasing to be an educator) is seen in Dave Strom's announcement of a 15 percent discount on replacement of damaged prints as well as "quality discounts" (unspecified) on Colonial Williamsburg films and filmstrips. Dave is no stranger to the commercial side—has had tours of duty with McGraw-Hill and Jam Handy and has been on government service most recently in Iran.

### Missionary Reports on Tape

A more intimate means of communication (and incidentally another boost for the increasingly varied growing market for magnetic tape) is reflected in the United Church of Christ offer of taped reports personally recorded by its missionaries abroad. The tapes may be kept by borrowers for up to a month on a \$1 service charge.

### Standard Oil—Ideal

Ideal Pictures announces its distribution of the entire film library (19 titles) of the Standard Oil Company (Indiana) throughout the midwest.

### Scratch It—You've Bought It

A popular filmstrip producer, when offering new prints on screening approval, notes on his order blank: "Any program use, or damage to filmstrip or record, will be considered as purchasing the materials."

### Churches Try Block Booking

A plan whereby a religious film library books a set sequence of 12 films instead of just one is reported to be well received by both religious film libraries and their patrons. Tried out by Cathedral Films in the Los Angeles area with a serialized Life of Christ, it is to be extended nationally and include also a similar series on St. Paul.

### Disney 16mm Field Men

Disney Productions 16mm Division announces the appointment of three field men to maintain closer contact with educational and business film customers. The men: E. Bradley Marks (East), Charles Jessen (Midwest), and Carl Barth (West). This marks a major expansion in the 16mm Disney merchandising force.

### Sound Projectors Leased

Bell & Howell sound projectors can now be had for short or long term periods on a lease basis that permits writing off costs as operating expense instead of involving capital outlay. Dealers reportedly apply rentals against purchase of the unit if bought within 12 months. RCA offers similar lease arrangements on its intercom systems.

### Video Tape Price Coming Down

Two price reductions within a year have brought the cost of an hour-long video tape from \$306.77 to \$282.90 and now, depending on quantity purchased, to as low as \$248.95. The manufacturer, Minnesota Mining, predicts that further improvements in manufacturing processes may bring the cost eventually to around \$150.

### Bruning-Documat Microfilm Deal

Documat microfilm cameras, reader and reader-printer are to be distributed by the Charles Bruning Company, Mt. Prospect, Ill. The "PFA" camera can photograph both sides of the original simultaneously and can be adjusted to double production by dual printing. The reader comes in four models; the reader-printer is to be in full production later this year.

### Trade Association Offers Classroom Materials

The Manufacturing Chemists Association announces the expansion of its program of furnishing science teaching aids

to include also the elementary grades. A series of experiments, involving inexpensive, readily available materials, are related to the everyday experiences of youngsters from kindergarten to sixth grade. A similar project for older students has drawn requests from 12,000 junior high general science classes, and from 6,500 senior high chemistry instructors. Six awards (\$1,000 and medal) have gone annually, for the past three years, to outstanding teachers of undergraduate college chemistry who, through the years, have inspired their students to choose careers in science or science teaching.

### People in the News

Maurice B. Mitchell, president of Encyclopaedia Britannica Films, announces the appointment of Elliott H. Newcomer as his administrative assistant.

David E. Strom, after seven year service with the U. S. technical assistance program in Iran, is taking charge of film distribution at Colonial Williamsburg. Dave is well remembered for his AV leadership activity in Minnesota, Connecticut and on the national level. Welcome back!

James L. Royer, formerly with Calvi Productions, has joined Neal Keehn at Jack West at the General Film Lab Central Division, Kansas City, Mo.

Cecil Stowe has been named manager of Orr Industries' newly created Customer Relations section. Former newspaperman and ex-Marine, he had been handling public relations and sales promotion for Irish tape.

Harrison Johnston is president of the recently formed Cetec Electronics Company, manufacturers of video monitor mounting the new wide-angle picture tube, as well as electronic display units. Mr. Harrison was formerly General Sales Manager at Ampex.

Raymond T. Bedwell, Jr., and Joseph F. Scharrer have received a research grant-in-aid for work in the history of radio broadcasting in the United States. Funds are being provided by the W. K. Kellogg Foundation through the National Association of Educational Broadcasters to the two Ohio State University graduate students who are presently working on doctorates in Radio and TV Programmes in the Department of Speech.

Ultimately, a complete catalogue of visual materials related to early American radio and collected all over the nation will be published. Those collected, reproduced and stored in 35mm slide film form will be made available to teachers, broadcasters and other interested persons, as an aid to providing better understanding of this important period in broadcasting history.

# 3 BIG REASONS

## WHY YOU SHOULD BE USING

# SCHOOL MASTER\*

### FILMSTRIP and SLIDE PROJECTORS

SCHOOL MASTER 750  
shown with exclusive  
rewind take-up (accessory)

- ① Your teaching efforts are more effective when a School Master's brilliant projection is used. Pupils comprehend faster with the brighter, more detailed image . . . projection problems are minimized.
- ② You can use Filmstrips or 2 x 2 slides with a School Master . . . a dual-purpose machine that utilizes the two most popular and effective visual materials. Conversion from one to the other is quick and easy . . . in seconds . . . without tools or removal of parts.
- ③ You concentrate on teaching, not the projector. So simple is its mechanism . . . so sure its operation, the School Master is easy for anyone to use.

School Masters, available in 500 and 750 watt manual or remote control models, are priced from \$84.50. Exclusive accessory rewind take-up allows filmstrips to be rewound into storage container automatically.

## With the Authors

Gwen M. Schultz is assistant professor of geography at the University of Wisconsin extension division on the Madison campus. In addition to other administrative and instructional activities, she has been writing and teaching correspondence study courses, has also published professionally elsewhere in the U.S. and abroad.

J. Roy Barron is supervisor of instructional materials for the Santa Barbara (Calif.) city schools. Prior to this post he was chairman of audio-visual education for the California Congress of Parents and Teachers. He has been a member of the executive committee of DAVI, president of the Audio-Visual Education Association of California. He has taught audiovisual courses in several summer schools and extensions.

Alfred H. Marks is assistant professor in the department of English at Ball State Teachers College. He taught for four years at Syracuse University where he received his Ph.D. in 1953. Previously he spent three years at Ohio State University, has published a considerable number of articles on American literature.

Millard Harmon teaches math and science at Weeks Junior High School in Newton, Mass. He attended Boston University and the University of Oslo, holds degrees in B.S., M.Ed. and is working on his Ph.D. He was in the Army Air Force in World War II and was an Army teacher in Europe in 1952-53.

Roger Lanoue is chairman of the audiovisual aids committee at Ramona School in Oxnard, Calif. He has been teaching for five years, with experience in high school, junior high and elementary. He teaches 6th grade at Ramona "to the finest group of youngsters in the world" and with his students being mostly of Spanish-speaking background he has found audio-visual materials to be of considerable help.

Robert B. Schlihs is audiovisual coordinator at El Camino College in California. He has received full cooperation from the college in testing his 'telecoach' principle and reports that a new course, a 'public speaking lab,' will be built around the device for the spring semester.

(left to right) RCA Television Systems; RCA Victor TV Receivers; RCA "Life-Tested"\* 16mm Projectors; RCA Language Laboratories; RCA Laboratory Testing Equipment; RCA Sound Systems.

Expert foreign language teachers have worked closely with RCA engineers who designed several RCA Language Laboratory Systems. Each of these language-practice systems is low-cost, simple to operate, readily expandable, easily installed and maintained. Invaluable for learning to *spea*k and *understand* any language.

Naturally the world leader in electronics is your best source for a variety of laboratory test equipment with highest reliability built in. The rugged RCA line includes voltohmysts, oscilloscopes, audio signal generators, test generators, tube testers, etc. Several items are now also available in inexpensive kit form.

*\*Rigid endurance standards have been set for RCA "LIFE-TESTED" Projectors. Individual components as well as finished projectors are subjected to continuous testing to evaluate the durability and efficiency of all operating parts. "LIFE-TESTED" at RCA means better, more reliable performance from RCA Projectors.*

# SIGHT PLUS SOUND PLUS THE ECONOMY OF 8mm FILM...

Complete with  
microphone, in  
handsome fabric-  
finished case,  
**\$399.50**

## with the **ELITE** 8mm **SOUND-ON-FILM** **PROJECTOR**

With the Elite, your students learn more, learn faster, learn more thoroughly. That's because the Elite enables you to add any pertinent sound track—voice, music, or both—to economical 8mm film. Student interest and retention are tremendously heightened; costs are kept to a minimum.

**Think of the convenience!** You can show the same film to junior grades in the morning that you show to more advanced grades in the afternoon, keying the sound track to the level of understanding of each grade. You can erase and re-make the sound track as often as you wish, with full brilliance and fidelity. And, the Elite is so rugged, so fool-proof and simple to operate that you need no specially trained personnel.

## **Tandberg 5** **3-SPEED, 4-TRACK STEREO** **RECORDER — PLAYBACK**

Because of its unmatched precision of manufacture and record/playback fidelity, the Tandberg 5 is the ideal instrument for the educational field. It offers monaural and stereo recording and playback for use in the teaching of speech, music, dramatics, languages. It will record seminars and conferences up to 17 hours on a standard 7" reel. Illustrated is the Tandberg Model 5-2. Complete with two TM-2 microphones, input and output cards, supply and take-up reels and transport luggage case, **\$513.95**.

A postal card will bring you full information. Address inquiries to Dept. V1

**Tandberg** of America, Inc.

## On the Screen

### Cover Scene

The inquiring mind at work—or is it at play? This Coronet film looks at the environment under which one of the greatest thinkers of all time developed the beginnings of the scientific method.

### AV Meetings Multiply

The report of a week-long workshop in instructional materials to be held this coming June at San Jose State College spotlights the growing importance of these regional seminars. This conference, designed for audiovisual specialists, librarians, teachers, supervisors and administrators, will include lectures, demonstrations, individual conferences and field trips.

The professional status of this type of meeting is borne witness by the quality and quantity of the audience and by the high degree of those participating in the programs. There is a lot to talk about in AV today — and more and more people want to listen.

### Two AV Books Available

Attention educators, AV specialists or anyone with an AV library. *Educational Screen* has a limited supply of two volumes, *Picture Values in Education* and *Comparative Effectiveness of Some Visual Aids in Seventh Grade Instruction*, both by Joseph J. Weber. One or both are available upon written request, including one dollar to cover postage costs.

### The Passing Parade In Educational Screen

10 years ago

Editorial notice is taken of a

new relationship between DAVI and the parent NEA; the new DAVI executive secretary "will hold a dual job and will have a first responsibility as a staff officer of NEA, will be selected and paid by NEA" . . . . A sociologist looks at television: is it a "form of radio with film characteristics (or) a motion picture distribution system?" . . . . A million Canadians reached by self-supporting 16mm film circuits.

20 years ago

Controversial government films, *The River* and *Plow That Broke the Plains*, score 91 and 88 percent respectively in *Ed Screen's* nationwide teacher-user film evaluation project . . . . A member of the editorial advisory committee questions the separation of visual and audio departmental administration, urges inclusion of radio and electrical transcriptions and asks "will there be departments of television education?" . . . . A special department, "The Federal Film," emphasizes that the National Archives Film Project does not include film distribution.

30 years ago

Educational talking pictures seen as rendering the silent film obsolete—"Textbooks will become thinner and some may disappear entirely "in many important fields of instruction" . . . . There is opposition to creation of visual education departments: "a leading authority on administrative problems" is reported as exclaiming, "Why not have departments of scratch pads!"

# PHOTOPLAY FILMSTRIPS

**Richard III**—Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50.

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**Alexander the Great**—Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**The Vikings**—In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**A Lesson in Mythology**—Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$7.00. With guide, \$7.30.

**Knights of the Round Table**—A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**Adventures of Robinson Crusoe**—In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$4.00.

**Hansel and Gretel**—In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kine-mins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth**—In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**Ulysses**—In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

## New York Group Honors Williams and Cypher

The New York State Audio Visual Council, at its meeting in Syracuse, N. Y., December 11, presented its annual award to Dr. Don G. Williams,

After receiving his award, Dr. Don G. Williams delivered the principal banquet address on "The Challenge Ahead."

professor of education and director of audio visual instruction at the University of Kansas City, Kansas City, Missouri, and to Dr. Irene F. Cypher, professor at New York University's School of Education.

Dr. Williams' citation referred to his considerable educational background in the audiovisual field, and continued:

"Not content with these activities, you have been active in DAVI since 1932 and have served on several of its committees. Since coming to New York State you have served this body in many capacities. Other activities are as follows: founding member and past president of University Film Producers' Association; member of CINE; trustee, University Film Foundation; U. S. representative to International Film Festival at Cannes, 1954, 1955 and 1959 and at Venice, 1956, and Rome, 1959; founding member and first chairman of the Audio-Visual Commission on Public Information.

"To top all of these, you have operated contracts for the U. S. State Department and have acted as audiovisual consultant for Iran, Turkey, Greece, Egypt, Lybia, Iraq, Korea and Tunisia from 1951 to date. You have directed the ICA Institute for Audio-Visual Leadership and you wrote the booklet *Motivate, Teach, Train* which was published by Point IV and which has been translated into eleven foreign languages."

After enumerating Dr. Cypher's aca-

ademic experience, her citation read: "Currently you have variously been text book editor for Prentice-Hall Inc., special staff lecturer for the City Colleges of the Board of Higher Education of New York City, free lance lecturer on audiovisual education and

Dr. Irene Cypher receives the NYSAVC award from Warren Russell, council past president and AV director, Kingston, N.Y.

the use of TV in education, filmstrip editor for *Educational Screen* and *Film News* magazines and audiovisual editor of *Instructor* magazine.

"Further you have served as visiting professor of audiovisual education at Wayne State University, Detroit, Mich., and at San Jose State College, San Jose, Calif. You have served this body on its executive committee, as president, as representative at each

Northeastern regional leadership conference, on many of its committees and as one of its representatives before the deputy commissioner of education of the New York State Education Department. Presently, you are also serving as chairman of the Department of Audio-Visual Instruction's committee on school buildings and equipment for the National Education Association."

## AVCOPI Announces New Plans In Chicago

The Religious Education Committee of the Audiovisual Council for Public Information (AVCOPI) held a two-day meeting in Chicago, Dec. 1-2, with coast-to-coast representation from denominational and other religious film and filmstrip producers. The Rev. Alva Cox, director of the National Council of Churches' Department of Audiovisual and Broadcast Education, and Don White, executive vice-president of the National Audiovisual Association, were co-chairmen.

The work of AVCOPI in disseminating public information on audiovisuals in secular education was said to have been so effective that similar concerted effort on the part of those engaged in AV communication in church activities is now in progress. The com-

Pete Margonian, technical photographic director of the Moody Institute of Science in Los Angeles, explains the controls on a time-lapse cinemicrography setup to industry film makers who visited the institute recently.

mittee plans to hold a two-day national meeting three times a year, timed when feasible in connection with some other major professional gathering. The next meeting is to be held on the Indiana University campus Feb. 26-27, immediately preceding the DAVI meeting at Cincinnati.

Donald Lantz (Family Films) is the new committee chairman, with James Thompson (Concordia Publishing House) vice-chairman. The committee's secretary is Mary Phyllis Young, director of AV education for the Board of Christian Education of the United Presbyterian Church. These three officers, plus Cox and White, constitute the executive committee.

### Film Distributors To Push Films Through Rental

A national conference of non-theatrical distributors of entertainment film was held December 3 and 4 in Chicago to plan for more extensive promotion of this important area of film use. Discussion centered on the need to make known the existence of clean, entertaining, often culturally rewarding 16mm films as a ready and complete answer to the sex-and-brutality diet that fills so much TV and theatre screen time.

While the advent of television and the concentration of distribution of some major brands eliminated some independent film rental libraries those represented at the conference reported excellent demand for good group-audience feature films. The discussion was concerned mainly with better communication with the various publics served and with new sources of product suitable for school, church, industry and community group showings. A broader meeting, involving all NAVA members who rent entertainment films, has been set for August 3 and 4, just prior to the NAVA convention. This two-day meeting is to be held at a hotel resort within easy driving distance of Chicago so that attention can be concentrated on entertainment film matters.

Chairman of the convention program committee is Carl Nater, of Walt Disney Films. The convention arrangements committee consists of Paul Foght, Roa Burch and Bill Kruse, the last named serving also as chairman of a publicity committee charged with accumulating case histories of outstanding uses of entertainment films.

Bill Rayner of the Swank organization, St. Louis, heads a direct mail committee, and Keith Smith, Omaha, will serve as liaison with the NAVA convention committee.

## Calendar

Jan. 7-9—NAVA, Western Conference, Pebble Beach, Calif.

Jan. 25-3rd Annual Film Program, Illinois Dept. of Public Welfare, Chicago.

Feb. 11-13—American Association of Colleges for Teacher Education, Chicago, Ill.

Feb. 13-17—American Association of School Administrators, Atlantic City, N. J.

Feb. 18-20—NAVA, Midwinter Conference, Washington, D. C.

Feb. 20-21—Biological Photographic Association, Southern California meeting.

Feb. 27-Mar. 2—National Association of Secondary School Principals, Portland, Ore.

Feb. 29-Mar. 3—NEA Department of Audio-Visual Instruction, Cincinnati, Ohio.

Mar. 6-10—Association for Supervision and Curriculum Development, Washington, D.C.

Mar. 24-26—4th National Conference on Aviation Education, Denver, Colo.

April 10-13—California Association of Secondary School Administrators, Santa Monica, Calif.

April 20-23—EFLA, American Film Festival, New York, N.Y.

Our professional know-how helps solve your AUDIO-VISUAL Problems.

**Strong Arc Slide Projector**

Projects 2" x 2" and 3 1/2" x 4" slides to a size and brilliancy comparable to finest theater projection. High intensity carbon arc lamp enables large screen projection, in difficult-to-darken rooms.

**Weinberg Watson Analyst Projector**

Ideal for teachers, doctors, coaches, for studying recorded data. Continuous variable speed from 2 to 20fps. Single frame advance. Flickerless projection.

# Black Glass and Complacency

*Paul C. Reed*

We could feel smug and complacent as we optimistically get set for the wonderful new decade of the sixties that is just beginning. Everything about the future of audiovisual instruction and the development of technological tools for learning seems promising. They've even developed black glass!

It was only last June when we reported to you editorially about the newly developed "low-light-transmission-type" glass for school-room windows that lets in only 44.2 percent of the sunlight. We thought this new grey glass was a great step forward in solving the problems of darkening classrooms for picture projection so that children could learn.

Our imagination was stimulated by the idea and we boldly called upon the glass researchers to come up with black glass that would shut out all the light and thus solve completely our room darkening problems. Much sooner than expected, they've gone and done it. In early November a dispatch from Corning published in the New York Times brought the glorious words of success: "*A black glass has been developed that is impervious to light. . . The glass filters out virtually all wavelengths of the ultraviolet, visible, and near-infrared spectrum.*"

Even if these glass researchers did not intend their black glass for windows, it is comforting to know that it is available. When architects insist upon window walls, audiovisual educators can solve the problem with black glass!

But wait. We can't be so complacent. We get one problem solved and up comes another.

Window walls were bad enough, but now a California architect has come up with the fiendish notion of completely covering the roof with skylights. We knew you wouldn't take our word for it so we went to some effort to get this picture proof for you, and we'll tell you where the school is if you insist upon knowing. But look at those rooftop windows! Count them! Each one is six feet square and there are over 700 of them. Not only did they build one school like this but before the audiovisual-minded people could discover what was happening, a second high school had been built the same way.

We understand that they've finally figured out a way to use projected pictures in some of the classrooms of these buildings. It was an expensive way. It was after the building was completed they began to think of how the teachers would teach. They're blacking out the skylights with metal louvers at a cost of more than \$800 per room. What a waste!

So don't be complacent in these promising days ahead. Such unique and bedeviling ideas for school buildings don't occur only in California. What about the new school in your town? Are you vigilantly making sure that teachers will be able to use audiovisual methods in that school?

At the NEA prize-winning Alamitos Intermediate School, Garden Grove, California, John A. R. Reed, Principal, says:

**“Even in these ‘outdoor’ classrooms, showing movies is no problem with our Pageant Projectors.”**

“Fresh air and sunshine belong in the classroom. So we built our school around patios, using big, tinted windows and sliding doors in every room. But even without blinds, our Pageant Projectors provide brilliant, detail-filled movies.”

Looking for a way to end washed out movies, even in hard-to-darken areas? Then try the Kodak Pageant 16mm Sound Projector. You’ll get brilliant screen images because the Pageant’s Super-40 Shut-

ter puts 40% more light on the screen than an ordinary shutter at sound speed. Take the portable Pageant anywhere. Set up in minutes. And you’re ready to roll with a show that takes full advantage of the impact of sound films.

*Any Kodak AV Dealer will demonstrate the Kodak Pageant Projector in your school, at your convenience. Or you can get full details by writing for Bulletin V3-22.*

*Kodak Pageant Projector* } **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

Assorted rock and mineral specimens are sent in partitioned mailing cases to correspondence students, who learn to recognize the objects by handling and examination and by use of an accompanying instructional folder.

# To See The World

by Gwen M. Schultz

**W**HAT is it that first attracts most students to geography classes? That inherent curiosity to "see the world," to vicariously visit exotic lands, and always, of course, the desire to experience new insight into one's own environment.

The geography classroom and laboratory bulge with visual aids—bright-colored maps, globes, planetariums, rocks, atlases. Remember the instructor on his way to class—long wall maps rolled up under one arm, a projector weighting down the other? How we enjoyed his lectures illustrated with slides and movies, and how much

Colored slides, a viewer and cards with pertinent descriptions now bring illustrated lectures to the home student.

more information we absorbed and retained because we had *seen* as well as heard. Remember him too in the field, leading us along meandering streams to observe erosion and deposition in action, and hammering off a chunk of rock here and there for us to examine.

*Must* students who study geography through correspondence courses be deprived of the most appealing aspect of this science—the illustrative? We decided they did not. In modernizing our courses at the University of Wisconsin Extension Division over the past few years we have been giving the person who studies alone as many as possible of the teaching tools and pleasures of learning that the campus geography student has.

Our student on an isolated farm, or with the Air Force in Alaska, or in a hospital bed, cannot experience the kick that comes from walking into class and finding the movie screen pulled down, but perhaps he receives an educational “lift” even greater from the supplementary materials that arrive in his mail.

**SLIDES.** A terraced hillside in France, a coral beach in Bermuda, a glacial spillway in Canada, a submerging Arctic coast, cirrus clouds presaging rain, a pictorial cross-section of America—such things as these many of our students see in their private illustrated lectures.

Persons enrolled in Physical Geography receive about 170 colored 2 x 2 slides illustrating their course; those in Geology about 120. These are sent in mailing kits, about shoebox size, that have compartments for the slides, a hand viewer, and printed cards that describe each slide just as an instructor would.

**MOVIES** can come to the off-campus student too. He arranges for the free use of a projector through some local agency such as a public school or library, county agricultural agent, the “Y,” or a University of Wisconsin Extension Division center. Then he selects the films he wants from a list offered by our Bureau of Audio-Visual Instruction. If enrolled in Physical Geography maybe he will choose to see “The Amazon Lowland” and “The Prairie,” or “Volcanoes in Action” and “Story of a Storm.” A student in Conservation might select “Daylight in the Swamp,” “The Living Earth,” “Birth of an Oil Field,” “Raindrops and Soil Erosion,” or others. He is also referred to the United States Forest Service regional office and the State Board of Health from which he can obtain additional free films helpful in his course.

**ROCKS.** Send rocks through the mail? Why not? All geographers are “rock hounds.” Those who cannot go out and do their own collecting still want to know their rocks as solid substance, not just black words on a white page.

The *physical* geographer is interested in rocks from the standpoint of composition and structure. “Granite is composed of the minerals, feldspar, quartz and mica,” he reads. But what *are* feldspar, quartz and mica? “Shale weathers faster than its metamorphosed equivalent, slate.” Why? “Obsidian has conchoidal fracture.” What’s that? We show him—with a kit designed especially for his course. He holds in his hands pink marble from Georgia, glassy black obsidian from Oregon, crystal-clear calcite from Mexico, bauxite from British Guiana, flaky mica from Canada, banded gneiss from New York, and

many more rock and mineral specimens. He studies their crystal shapes, cleavages, composition. He scratch tests them for hardness. He receives “tangible-visual” instruction. He learns to identify rocks. And that is something one cannot do merely by reading a book on the subject.

The *economic* geographer, on the other hand, is interested less in the physical properties of rocks and more in their use, but he still wants to know what they look like, those vital but vague materials he reads about. Mineral ores—copper, lead, iron, aluminum. Building stones—limestone, sandstone, marble, granite. Those having industrial uses—kaolin for fine china, and talc for face powder, for example. And so samples of these and others that are discussed in the text book are mailed to him in a kit with supplementary descriptions.

The inmate at Alcatraz who is taking a course by mail through our department may not be quite as eager to look at rocks as his less-confined fellow correspondence students, but even he will benefit. At least he will learn to distinguish, say, sandstone from quartzite, and to judiciously select the former softer rock if possible when detailed to the chore of making little ones out of big ones.

**FIELD TRIPS.** There is nothing that says a student needs an instructor along in order to take a field trip. Our Conservation students each take four individual field trips during their course. With briefing on how to proceed, and the wedge afforded by the fact that this is a requirement, they brave their way into places where they would otherwise probably never venture, and “see” another segment of their world. They may visit suggested locales, such as a lumber company, a well-managed farm or forest, a water supply system, a plowed field in the rain, a flood area, a factory—anything pertinent to conservation.

**MAPS.** Without maps a geographer is a blind wanderer.

Each of our students who does not have his own atlas may borrow one from us without charge.

Small personal-use maps, those on which the student will plot locations and distributions, are used in abundance in correspondence work, especially in the regional courses, such as South America or Europe.

United States Geological Survey topographic sheets are given to students in some courses.

We don’t want just to test students. We want to inspire them to further study and research, even if it is merely for their own enjoyment. You may not find the names of our correspondence students in footnotes of scholarly dissertations, but—thanks to visual aids—a few more rocks will be picked up and turned over; a few more rainy days will be privately forecast; a few more tourists will talk intelligently about things they see; and few more stay-at-homes will better comprehend the nature of their environment.

Practical problems involved in incorporating visual aids into correspondence courses can be laborious and baffling, but the thought, in principle, ought to be: if it helps to teach and it can be mailed, put a stamp on and send it.

# Meet The Telecoach

by Robert B. Schlihs

A class at El Camino College watches a student who in turn keeps an eye on the "Telecoach" for mid-talk pointers on his presence and delivery.

**I**N teaching situations where student performance figures prominently, criticism plays a major role. There is general agreement that in such situations criticism would be most effective at the moment of error. The difference between the value of, "you are missing . . ." and, "you missed . . ." appears self-evident. But how to point out fundamental errors or make recommendations without interruption or damage to the effort and the mood of a given performance?

In the typical performance situation students very often commit gross errors from the very beginning to the last word of the exercise. Up to ten or twelve minutes of continuously poor and untutored posture, eye contact, rate (too fast or too slow), etc., is not at all uncommon. Following such a performance, criticism, which it may be said is already "cold" or less meaningful, is submitted to the student.

And while such "after the event" appraisals may serve to enlighten the student, it is unfortunately true that in the majority of cases as much as two weeks may elapse before he has the opportunity to perform again. Not until then may it be possible to know the degree to which he

has or has not profited from the criticism. This cycle, with minor variations, will very often repeat itself throughout the course. As a result of this pattern, improvement for the average student in actual performance skill and technique falls short of desired standards.

A device and a method has been tested which is believed to provide a partial solution to the above dilemma. The test was conducted in a public speaking class during the 1959 spring semester at El Camino College near Los Angeles.

### *Conception of the Idea*

The idea for this method grew out of a desire to achieve more rapid development in technique and skill on the part of students enrolled in performance courses. It was felt that the possible disadvantage of additional "pressure" on the student would be outweighed by:

1. careful preparation and orientation as to the purpose and the scope of the program;
2. prior agreement between student and instructor as to amount and kind of coaching;
3. creation of a performance-lab atmosphere with some de-emphasis on grading during "lab" exercises;
4. positioning of the coach so that only the performer receives visual communication.

Subsequent classroom testing indicated that in the majority of cases a significant modification of technique or skill resulted and that the device was a practical teaching tool. Refinements in method and technique of instruction tended to develop as the project went beyond the introductory stage.

### *The Project*

The project started in October of 1958 with the construction of three coaching devices, planning of method and technique for classroom use, and the assembling of data on effectiveness, relevancy, etc. Additional testing is still believed necessary for the presentation of adequate evidence as to the comparative value of the method.

### *The Device*

The Telecoach is a visual unit which utilizes the checklist principle by combining signal lights with printed material on one panel. It consists of a main panel which can be activated by the instructor from any distance by a hand-size control box. On the panel are seven grooved channels for easy in-and-out manipulation of 3 x 13 in. printed cards. Each card has its own signal light. The cards refer to elements to be coached during a given activity. The seventh or topmost channel may serve as a title card position and its signal light may be used as an attention getter, time limit warning signal, etc.

The Telecoach is of hinged suitcase construction with compartments inside for storing everything necessary for a series of activities. Weight loaded is approximately 15 pounds. The dimensions are: height 21 in.; length 28 in.; and depth 5½ in. It operates from any standard 110 volt outlet.

### *Technique and Method*

The purpose of this aid is to assist the instructor in contacting and coaching a student without interruption of the performance. Coaching may be varied by shifting the emphasis to *strengths*. Another technique is to have students coach students. Still another variation is to place the coach behind the performer so that the audience may observe the criticism.

Cards making up the "check list" may be devised according to level of achievement or as indicated by individual considerations. The cards may be rendered in groups of six related elements comprising a category, or random elements may be employed to increase the breadth of coaching to several categories.

Terminology for the "elements" will vary according to instructional needs and individual preference. It was assumed that beginning students could respond with the least disturbance to coaching on elements not requiring rearrangement of outline, modification of content, etc. In some cases, however, random elements comprising several categories were used with positive results.

### *Refinement of the Device and the Method*

In progress at the present time is the construction of a Telecoach with an audio unit. The end-in-view is greater flexibility of method and the development of means for individual study. To accomplish this end, the Telecoach will have mounted inside on the back panel—controls facing to the back—a special light-weight tape recorder. It is a dual recorder-reproducer permitting simultaneous direct recording on two channels or simultaneous playback of "master" channel and simultaneous recording on "student" channel; or simultaneous playback of "master" as well as "student" channel.

The recorder will be accessible to the operator by way of a flush-mounted door in the back of the Telecoach case and would, when open, serve as a shelf.

With the addition of an audio function, greater scope is possible in such concerns as instruction and individual study programs.

### *Choice of Lab Methods*

Uniquely, two methods for individual lab study are possible through a simple "switching" feature built into the recorder:

The student may listen to both channels simultaneously as many times as he wishes. After first noting on paper the criticism and where it occurred, he may then re-record over the *instructor* half of the tape. The returned tape would include both the original and improved talk.

Or, after listening to both channels, he may re-record over his original. The return tape would include the improved effort and the instructor's commentary.

In both cases the returned tape would serve as the basis for instructor evaluation and the grade. As implied earlier, certain exercises such as major speeches would be graded as delivered to the class audience.

# A-V in Russian Schools

by Millard Harmon

IRVING R. Levine, in his recent book, says, "There are no experts on the Soviet Union; only varying degrees of ignorance."<sup>1</sup>

This statement was partly the result of the enormity of the Soviet Union. Sixty languages are spoken within the borders of the Soviet Union, and these borders define 1/6 of the land mass of the world. There are bound to be a great many differences—in dress, in customs, in climate and natural resources.

However, it is interesting to find that the 1,800,000 Soviet school teachers<sup>2</sup> maintain an educational program that varies little throughout the country. The curriculum itself is dictated and developed by the central committee of education in Moscow, and the degree to which it is followed is not weakened by distance from Moscow, as witnessed in schools of Irkutsk, the capital of Siberia. Student dress is an attractive uniform. As one Russian teacher stated, "That does away with a show of economic differences of the parents."

In the fall of 1958, this writer spent five weeks traveling 9100 miles within the Soviet Union, visiting 14 schools. In these schools, 62 classrooms were observed, 42 of which were used as the basis for a doctorate dissertation at Boston University.<sup>3</sup>

While the walls of language and history classrooms were relatively bare, most classrooms had a picture of Marx, Lenin, or Khrushchev), this was certainly not true in science rooms, where most often equipment was stored in wall cabinets around the room. These cabinets had glass doors, making the contents visible to youngsters within the room. The walls carried many charts, and plants were observed in abundance in classrooms where botany was taught.

The most common method of teaching observed was the lecture or lecture-demonstration method. For science demonstrations, sufficient audiovisual materials were available to supplement the lecture.

Great stress is given to the shop sciences, and since the recent decree revising Soviet education,<sup>4</sup> there is apt to be continued emphasis in this area. In machine shops visited, there were wall charts explaining machine operation. Home economics classes, largely sewing and cooking, were using few wall charts.

A decree of 1955 from the Central Committee of the Communist Party declared that every ten year school must have a driver education program. The driver education classroom in School 717 in Moscow was perhaps the best equipped

audiovisual classroom visited in the Soviet Union. Classes were small. Automobile parts—pistons, valves, crankshafts—were placed around the room for student examination. There were two automobile units in the classroom. One engine, with cutouts, was electrically driven to show the function of each part. The other engine was fully operational. With this piece of equipment, the instructor created malfunctions that the students had to correct. There were extensive wall charts, and an electrical selection board at the front of the room was used to teach road signs.

There was ample blackboard space in all classrooms visited, and corridors were liberally furnished with bulletin boards.

In one class, a 16mm film projector was seen stored in a wall cabinet with microscopes. None of the other classes visited had such a projector in view, although there might well have been additional projectors available. In one science class, there was a stationary-permanent screen mounted at the front of the room at sufficient angle to indicate the possible use of an overhead type projector.

In the schools visited, there seemed to be an ample supply of textbooks. In addition, each student kept a "copy book," a small notebook for classroom lectures and homework. A large number of photographs were displayed on corridor bulletin boards.

## Subject Area Breakdown

*Primary grades.* In grades one through four, there was wide use of flash cards and blackboard drill. In arithmetic, the abacus was used extensively both by pupils and teachers, as it is throughout Russian commerce. Turnover charts, paint materials, scissors, and construction paper were also much in evidence.

*Language classes.* Little ingenuity was seen in development of audiovisual materials. Standard items, i.e. text, blackboard, were always present. There was no evidence of tachistoscope work, recordings, or other audiovisual aids.

*Mathematics.* In mathematics, departmentali-

Top left: audiovisual devices stored in a science classroom in Leningrad. Left: a botany class in Kiev. Above: two "Young Pioneers," who make use of AV material in their group activities.

zation occurs early, and algebra and geometry are taught in grades six and seven. In most mathematics classes observed, there were several geometric objects, a lined blackboard graph, board compass and protractor. Here again, little audiovisual ingenuity was observed.

*Science.* The sciences are also departmentalized early in Soviet schools. Rather than general science, subjects taught include geography, zoology, botany, anatomy, physics, astronomy, and chemistry. In these classes a great deal of audiovisual activity was carried out. Classrooms seemed well-outfitted with microscopes, wall charts, and plants for both study and decorative purposes. Often samples of plants from distant parts of the world were available for class examination at the appropriate time in the botany curriculum. Also present were geology collections for the geography study, skeletons for anatomy classes, and wall charts for most sciences. Test tubes, chemicals, and electrical apparatus were being used in the various science

classrooms visited.

The use of audiovisual aids in Russian classrooms visited by the writer met a minimum level as a result of the standardization of the educational program from Moscow. However, innovations which might have enabled individual teachers to excel in providing an outstanding program supported by audiovisual aids simply were not seen.

In the 3100 feet of 16mm film shot within Soviet classrooms, as well as the 567 Polaroid Land Camera<sup>5</sup> prints taken in and out of Soviet schools, there was an indication of an awareness of audiovisual technique. Five weeks within the USSR is a short time, and 62 classrooms a small sampling upon which to base major conclusions. The general availability of audiovisual materials was extensive, while total utilization probably was below what might be expected.

<sup>5</sup>Photographs illustrating this paper were taken in the Soviet Union with the 110A Polaroid Land Camera.

# Indi- Visualized Learning

**T**HOUGH audiovisual materials have proven valuable as mass media, they can also contribute significantly to individual instruction. With increasing concern for "individual differences" and a need to develop each student to maximum potential, applications of audiovisual equipment and materials for small group study can result in a major impact on education.

Without minimizing the contribution of individualized audio experiences let us continue to develop techniques to exploit the possibilities inherent in "indi-visualized" instruction.

This picture story is designed to stimulate viewers to extend their own vision to wider application of techniques for teaching small groups with visual materials.

by J. Roy Barron

These missile models are complete with moving parts and true-to-prototype details.

# Models For Learning

by Roger Lanoue

To a greater extent than ever, plastic scale model construction kits are being used for educational purposes. These kits are of pre-formed styrene plastic, to be cemented together by the model builder. Actual construction might run from less than an hour for some of the missiles and airplanes, to several days for the more intricate ships and automobiles. These range from life size animals, which come complete with realistic furry coats, to miniature space ships with their own crews of tiny in-scale astronauts. Most of them are authentic in every degree to the original prototypes. In the case of space ships, they are usually designed on the basis of known scientific theory.

The majority of these kits, some 40 million of them, will be purchased and assembled by youngsters between the ages of ten and fifteen. This hobby has now even surpassed stamp collecting as the favorite indoor pastime of boys and girls in this age group.

In addition to pleasure, these youngsters also gain a substantial amount of valuable information and develop understanding from this hobby; knowledge which, in many instances, is superior to that of their elders. It is hard to envision youngsters saving their money to buy textbooks, but in the truest sense this is what they are doing when they purchase the average scale model

kit. It is not a misnomer to call them a "three dimensional textbook."

The discovery that this highly popular hobby has merit as visual education has been made by a considerable number of educators in the past few years. Typical is the interest in and recognition of the educational value of the plastic scale model construction kit which motivated the California State Department of Education to recommend recently that such kits be used to enrich the educational program.

The author's experience with the use of such kits in the classroom—based on information acquired during an extensive series of experiments which involved that wonderful group of Ramona School youngsters who comprise his 6th grade class—is yet another example of the keen interest in new developments in the field of audiovisual education displayed by individual school districts which are fortunate enough to have the services of educators such as Mrs. Marge Womack, of Oxnard's very efficient Curriculum Materials Center.

Armed with a wide assortment of kits, successive waves of these energetic 6th graders attacked the problem of how best to utilize them to achieve maximum learning, each new group incorporating into its practices and procedures the most successful approaches made by the previous groups as determined during the interim evaluation periods. At the conclusion of the study, a final evaluation indicated the following:

Primarily, each plastic scale model construction kit provides a unique reading experience of genuine merit.

The method which proved the most meaning-

A student computer group works on a problem prepared by a student programming group. They are calculating the times made by their airplane models.

She is covering her koala bear model with realistic fur, a part of the kit.

ful to the youngsters—and therefore the most productive of desirable learning outcomes—involves the modeler's attentive handling of each of the individual styrene parts used in the actual construction of the model, the identification of these parts first with the diagrams contained in the instruction sheet in order to acquaint him with the function of each part in relation to the whole, and then with the printed words in the same sheet which correctly name these parts.

Following this, the modeler is asked to define these words, basing his definitions on the context of experience provided by the integration of the parts and the diagrams. Having now a need to know, he then compares his brief written definitions with those provided in the dictionary or other pertinent texts, noting the similarities and differences which exist between them and his own.

The aspect of tangible reality which the manipulation of the parts lends to their printed-word counterparts provides the basis for the next undertaking, the mock assembly of the model. This is accomplished by the integration of the

printed words, the diagrams and the parts, in that order. Again the dictionary—which has become as real a tool as any manipulated in the model building process—plays an important role in meeting an understood need.

A completely successful mock assembly is then demonstrated and explained in proper sequence to the instructor. Actual construction and decoration of the model—using the special Type S cement designed for permanently joining the various styrene parts together—follows this phase.

The completed model is one with which the youngster readily identifies and in which he takes great pride. More than that—perhaps due to the realistic qualities possessed by the model itself—there is an observable transfer of this identification and pride from the model to its real-life counterpart.

The second most significant feature of the plastic scale model construction kit is its wide application. It can be utilized for multiple learnings.

For example, the construction of a plastic scale model of the "Santa Maria" might be undertaken to enrich the content of a social studies unit dealing with the exploration of the New World. Yet would not the construction of the same model be equally effective in motivating a unit in the reading of biography? Would it not also enrich a space science unit by illustrating problems common to explorers of both eras? Would it not be quite effective in motivating creative writing experiences?

The Ramona study indicates that it would indeed, and that similar multiple applications are inherent in the very nature of plastic scale model construction kits, for they are representations of reality and reality is not the exclusive province of any *one* subject matter field.

To sum up, the plastic scale model construction kit is rapidly emerging as another valuable application of visual education as it has the ability to make learning both pleasurable and precise.

# The Progress of Visiomark

by Alfred H. Marks

THE white chalkboard screen has come a long way since last I wrote about it in the pages of *Educational Screen and Audiovisual Guide* (November, 1956). The screen surface has been improved, more readable and more erasable crayons have been found, and an erasing cloth that cuts teacher exertion and erasing time to a minimum has been turned up. Six 8 x 8 ft. screens have been installed permanently in rooms of Ball State Teachers College's new English building in Muncie, Indiana, and Ball State English professors are able to spend several hours in each course projecting student themes in the very classroom they use every day.

The first Visiomark® surface was a swan white shade of Marlite, manufactured by Marsh Wall Products Co., of Dover, Ohio. This highly polished surface takes a dark, readable image even in half darkened rooms, but viewers find it wise to choose a seat at a wide angle to the screen in order to avoid glare. Marlite is now available, however, in so-called semi-gloss shades which take a soft, readable image with little refraction.

Four of the Ball State screens are of the swan white shade. These were supplemented in the summer of 1959 by two semi-gloss screens, one in polar white shade and the other in a foam green. The restful foam green screen has been installed in a narrow seminar room in which students cannot easily change seat positions to view the screen at the end of the long table. Were the screen highly polished there, the glare could not be avoided. The polar white screen is in a large classroom where it is presumed that, in addition to student papers, slides or films will be shown, with colors that would not be rendered properly on a green surface.

With the cooperation of the American Crayon Company, Sandusky, Ohio, crayons have been found that write darkly on the Marlite surfaces and erase cleanly and easily. The swan white surface uses a Climax #1305 black glass marking pencil. The polar white and foam green surfaces use a Ritex fabric crayon #1413 blue or #1415 black.

To search for a more effective eraser for an easily erasable crayon may seem like unnecessary refinement. It must never be forgotten, however, that the classroom teacher is not hired primarily as a mechanic or audio-visual technician. English teachers, furthermore, are often among the first to remind one of that fact. The recommended crayons can usually be erased only with a disposable tissue or a clean soft cloth and some elbow grease. Absorbent polishing cloth #562 manufactured by Cleveland Cotton Company, Cleveland, Ohio, replaces both tissue and elbow grease. The instructor must be careful, however, about clutching a polishing cloth in a clammy hand while lecturing before a projector on a warm day. Damp cloths and grease pencils produce only indelibility.

The Ball State English building Visiomark screens are, as has been mentioned, eight feet square. They are made up of two 4 x 8 ft. Marlite panels butted side by side. (Marlite lists in Muncie lumber yards at \$14.40 per panel.) The screens are placed in a position secondary to the blackboards, usually on a side wall. Here they provide a projection surface convenient for most purposes, including opaque projecting anything the instructor wants to show the class at a minute's notice. The class need only turn chairs to face the screen.

The process has been used in freshman composition classes, intermediate composition and creative writing classes. It has also provided a substitute for stultifying oral reading of papers in a graduate seminar. It is useful for papers of

\* When queried about the word 'Visiomark' Dr. Marks replied that—"The adjective-noun-verb 'Visiomark' was coined by me with the aid of some interested students."

several pages but is most convenient for single page themes, particularly, of course, those with markable errors that most members of the class are still committing. Paragraph construction is greatly facilitated by it. And in regard to errors that most of the class are still committing, it produces best results early in the course. A useful technique is to explain one's abbreviation system after the first theme while projecting the student themes that contain each error.

I have used Visiomark process with all the composition classes I have taught for the past three years. Time spent in this manner has varied with the class, but it would not be overestimating to say that I have spent an average of 15 class hours per 60-meeting course at the white board. Student response has been enthusiastic; complaints have been nil. It is probable that a controlled study of the effectiveness of the method might win some people to using it who might not otherwise do so.

I am as little in doubt of the effectiveness of the Visiomark screen as I am in doubt of the effectiveness of the blackboard or the textbook or the English theme. I do not feel that I am indulging in a pioneer's dream when I say that I feel the Visiomark screen will someday become a standard unit of English classrooms.

## Visiomark Screen Specifications

### 1. Surface:

Marlite

Manufactured by: Marsh Wall Products Co., Dover, Ohio

Shades (in order of desirability)

- a. Polar white
- b. Foam green
- c. Swan white

### 2. Crayon:

a. If using polar white or foam green surface—Ritex fabric crayon #1413 blue or Ritex fabric crayon #1415 black

b. If using swan white surface—Climax #1035 black

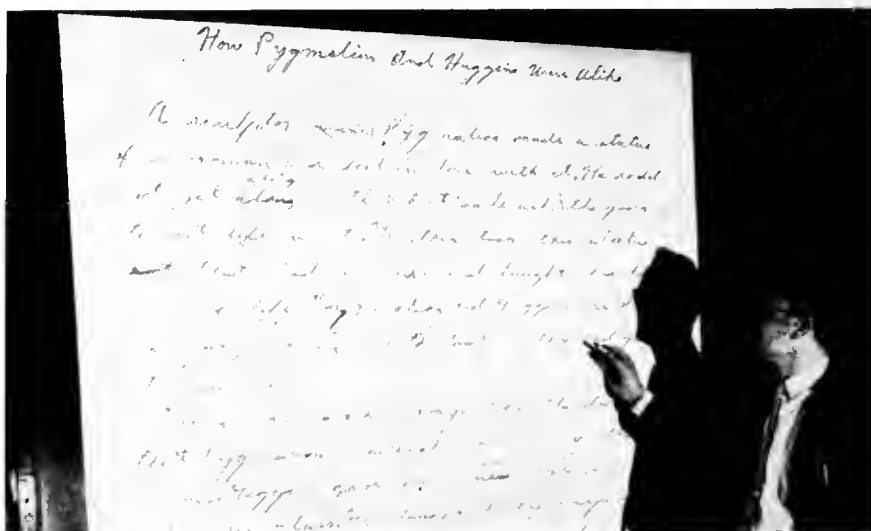

(Above crayons are manufactured by The American Crayon Company, Sandusky, Ohio)

### 3. Erasure:

Use tissue or clean, soft, dry cloth or—  
for best results—

Absorbent polishing cloth #562 manufactured by Cleveland Cotton Company, Cleveland, Ohio

Crayon marks on the Marlite surface are as clear and sharp as the projection. Dr. Marks demonstrates.

Professor Dick Adams lectures to a freshman English class in a room with Visiomark screen on the side wall.

## In the Church Field

by William S. Hockman

### Youth Film Festival

The Fall Film Festival for the young people of our Classis was a great success, with a record registration of 166 youth and 44 adults. This registration was a substantial gain over previous youth rallies and may be attributed to a thorough publicity job and the drawing-power of the films presented.

The plan of the film festival was to present the three films, *The Reformation*, *One Love - Conflicting Faiths*, and *I'll Sing, Not Cry*, and follow with an evaluation of each film. I asked them to use four categories: "excellent," "good," "acceptable," and "poor." No prizes were awarded, as is usually done at film festivals, since our aim was wholly informative and educational.

Beginning with a spirited hymn-sing, we went right into the showing of the first film. My preparation of the audience for this film, *The Reformation*, began with the hymn, "A Mighty Fortress Is Our God," which was the last one of the hymn-sing.

In what context was this film shown? Suppose I give you the 'introduction' which preceded the showing:

"This is Reformation Sunday, one of the most significant Sundays of the year for Protestant Christians. What makes it so? Perhaps we have forgotten what the Reformation was all about. Do we only remember that it marks the anniversary of that memorable day when Martin Luther took his little hammer and nailed something to the door of some church in Germany? Protestants should know more than that!

"What was happening in Europe at the time of the Reformation? Who were the leaders in this movement for independence from the Church of Rome? Why did they want independence? To enable us to better understand what this day signifies, I present *The Reformation*, by Coronet Instructional Films."

Now the film was shown, and the presentation was as smooth and professional as is possible in a local church situation. The next film was to be *One Love - Conflicting Faiths*, and I decided that I would tie my introduction of it to the film previously seen and present some data on mixed marriages, the theme or problem of the film.

Aware of how seldom we are given such things in report articles, I am bold enough to give you the text of my introduction to the second film presented in our festival:

"Opened before us in the last few minutes has been a panorama of the people, the places, and the events that shaped the Protestant Reformation some 400 years ago. Is the Reformation a dead issue? Does what happened then affect the way you and I live today?"

"The second film in our festival, *One Love - Conflicting Faiths*, makes clear to us that the Reformation is still a very live issue, especially with young people who fall in love across the barriers of faith.

"To point up how live this issue of interfaith marriage really is, I would like to relate some rather startling facts recently turned up in the Harvard Survey of Happy Families. It surveyed 60,000 American families. Nine thousand, or about one in six, were mixed marriages. Here are some of the things the researchers found out:

- 1) Couples with different religious affiliations have fewer children than those who marry within their own faith.
- 2) Children of interfaith marriages are much less likely to finish high school than

- when the parents are of the same faith.
- 3) Six out of every ten children of Catholic-Protestant marriages end by rejecting all religions.
- 4) About half of the men who marry non-Catholics abandon their faith.
- 5) Men and women of all faiths showed a higher divorce rate when they married some one of a different faith.
- 6) Teenage arrests rates are much higher in mixed-marriages.

"These are pretty startling facts! Our film will put flesh on the facts as it dramatizes for us the first year of the marriage of two fine young people, one a Protestant and the other a Roman Catholic.

"Let us now see, in the light of these considerations, *One Love - Conflicting Faiths*, produced by the Department of Family Life of the Methodist Church."

After this film there was a definite impulse for discussion. It had to be postponed, however. I suggested to the young people, eager for discussion, that they turn to their fellowship advisors and ask for help in the form of programs on the subject of mixed marriages. By the end of the festival, I understood that several such programs were already being arranged.

The finale of our festival was the film, *I'll Sing, Not Cry*, produced by the Berkeley Studios of Toronto, Canada, for the United Church of Canada and the United Church of Christ in the United States. It was shot by Anson Moorhouse and crew in Angola, West Africa, late in 1958, to provide background for this year's mission study of Africa by the churches.

Since the film carries an excellent introduction of its own, explaining the importance of music in the life of the African, I did not think that words from me were needed. In similar manner, the film closed with the singing of a hymn by a group of young Africans and a seven-fold 'Amen,' making concluding remarks unnecessary.

From the viewing, we went into the evaluation. Rating cards were distributed to the 190 who participated in the evaluation. Of these 147 were young people and 43 adults. Their reactions were as given in the table below:

	Excellent	Good	Acceptable	Poor
<i>The Reformation</i>	15	97	63	15
<i>One Love - Conflicting Faiths</i>	93	80	13	4
<i>I'll Sing, Not Cry</i>	131	52	7	0

## AO's New Opaque Delineascope Brighter...Lighter... ...more convenient

**BRIGHTER** AO's New High-Speed Opaque Delineascope projects a brighter image than any other opaque projector you can buy... a full 145 lumen output. Screen illumination is uniform from edge to edge and definition is sharp from corner to corner.

Only American Optical uses all-glass reflecting surfaces to provide maximum illumination intensity. Glass reflectors will not tarnish or deteriorate... will not scratch with cleaning. Your AO Opaque will still produce the brightest screen image, even after years of service.

**LIGHTER** AO's New Opaque Delineascope is easily portable... weighs just 29 pounds. Copy platform is extra deep... plenty of room for material up to 2½ inches thick. Elevation locking device positions platform instantly at any desired level.

**MORE CONVENIENT** Adjustments for focus, optical pointer, switch and roll feed are all controlled quickly and conveniently from the right side of instrument... where they belong.

Ask your AO Sales Representative for a convincing demonstration or write...

**American Optical  
Company**

SPENCER

**INSTRUMENT DIVISION, BUFFALO 15, NEW YORK**

What did our festival accomplish? I would suggest at least three outcomes: 1) an acquaintance with three excellent resources for the year ahead; 2) definite motivation-to-use these materials and others in the total program of the church; and 3) a deepening of the appreciation of these future leaders of the Church in the qualities and powers of good and useful films and other audiovisual media. If we were to add a fourth, it would be that such a festival takes the A-V idea to the "grassroots" of our churches—where everything really begins and ends.

—by *Garrett Short*  
Minister in the Reformed Church in America; Graduate Student at Syracuse University in Religious Education.

### Parents vs Children

When you need to point out to parents or to young people, or both together, that when it comes to the conduct of young people there are (a) some things which parents alone should decide, and (b) some things which young people alone can decide, and then (c) quite a few things which should be freely discussed and decided as a family—then get and use the 11-minute b&w film *Who Should Decide*, produced by Coronet Films and available through them (Chicago 1) and from many A-V rental libraries. A good film for fellowship meetings, for adult classes and clubs, and for youth rallies and conferences.

### Palestine Filmstrip Trio

The Kings were with us for Thanksgiving dinner and when it was over I asked son Maek (15 years) and daughter Jean (age 10) if they would like to look at some new filmstrips.

Maek set up and ran the projector and Jean selected the filmstrips and operated the record player. *Geography of The Holy Land* was Jean's first choice. It is 40 frames of recent color photography describing the four main geographic sections of this ancient country. Soon we adults were invited to see "this interesting filmstrip." We liked it, too, so the user's guide is right when it says the target audience is Junior through adult.

Next was *Bible Scrolls*—a new presentation via 40 fine photos and an interesting commentary of the story of the Dead Sea Scrolls and the Qumran ruins. It, too, was a 'hit' with this target audience! Mr. King, experienced school administrator now working for his doctorate in education at Columbia University, had just

one word for this filmstrip—"Excellent."

When Jean got out *Bible Cities I* began to wonder if archeology could hold the attention of this after-dinner audience. My fears were without foundation. It did. Dotham, Capernaum, Mediggo, Jerash, Gibeon, Jericho, Jerusalem, Shecem, Petra, Shiloh, etc. went before us in fine color photographs and the commentary related these ruins to biblical events and people. Again the producer was right about the target audience for this filmstrip being Juniors through adult: We were hit! Produced by Family Filmstrips, Inc.; order through your A-V dealer.

### Context Is Needed

At an A-V skillshop in St. Stephen's College, Edmonton, Canada, some seminary students used a film-clip from the motion picture, *The Rich Fool* (Family Films, Inc.), to provide a context for worship. It was very effective. It created mental activity before worship, a much-needed preface.

This is an imaginative and valid use of short films. While I have used films in worship many times they were usually the context of the sermon or meditation. I like this idea of giving the whole service of context. I commend Dr. Thompson and his students.

This use provides me with a second utilization suggestion for the kinescopes of the Methodist Talk-Back series. Excellent for starting discussion on deep religious subjects, these kinescopes will be equally useful in setting the stage for services of real worship. After seeing *A Time For Waiting*, or *The Apple Orchard*, or *The Fifth Plate*, worship could be vital, stirring and soul-searching.

Used to motivate discussion, these three kinescopes would be excellent for the discussion, respectively, of such questions as: Is Your Concept of God Mature Enough For Life's Tragic Moments? How Much Sacrifice Does Love Really Require?; and, How Can The Tension Between Home and College Standards Be Resolved?

Technically these three are up to kinescope quality, which, by the nature of things, is a bit below film studio productions. Produced by the Methodist TV Radio and Film Commission, they are available through the Methodist Publishing House, Nashville 3, Tenn. Try, also, your local film rental library.

### Comments on This and That

In a 257-page book, *Audio-Visuals*

*In The Church,*" Gene A. Getz presents the more important visual and audio aids in relation to the work of the church: objects, models, exhibits, graphics, visual boards, still pictures, projected still pictures, motion pictures and audio-aids. His three closing chapters deal helpfully with audio-visual aids in foreign missionary education, organization and administration, and the final challenge. The appendix and index make the book even more useful. There are 138 well-planned and effective illustrations. Here is a good and useful book for the worker in the local church and for those planning A-V courses for church people and others. From Moody Press, Chicago 10, Ill.

While not wishing to trespass on the premises and prerogatives of my neighbor, Max Bildersee, I would like to mention for all those who like their wedding music via chimes and vibraharp that Charles S. Kendall, minister of the First Methodist Church, Hollywood 28, California, has probably done up this package as nicely as any one on a Dot Records release entitled *Wedding Chimes*, #DLP 3187.

Disagreeing with a Canadian reader, I would like to suggest that the real reason so many clergymen are shy of audio-visual aids may be found (a) in the fact that few of them were ever taught by that method; (b) that they just have not had time to find out about them; (c) that many of those who took one look decided that it was just too much work and fell back on their vocal chords; and, (d) that most clergymen are not by nature inclined to appreciate educational methodology. I could add that they often equate vagueness with spirituality and that much sermonizing is bringing a mediocre idea to a slow boil.

"What's new?" used to be a bothersome question. It is no longer. The A-V dealer in the church field has much new material to talk about. The trouble is, as I observe here and there, that the dealers are not 'talking' via materials that reach ultimate consumers. Thus fine filmstrips which have been out six months or a year are unknown even among people who want to know about them. Producers and dealers, here is something for you to get to work on.

Will we go to jail if we record the soundtrack of a film and use it in our church later on with the same group or with another group? My friends

and I have been noticing some pretty potent educational stuff in some of these stories and commentaries. This material, plus a dash of imagination and a few squirts of educational know-how, might help us get the job done—if we can use our tape recorders in this manner. Who knows the answer?

# FILMSTRIPS

by Irene F. Cypher

One fact that delights us is the rather gradual appearance on the horizon of something we ourselves always liked in the days when we were part of a museum staff, namely "kits of materials." This bringing together of several kinds of materials, all related to some central core, always seemed good and useful. It is impossible to give a true picture of any country or people through the medium of one type of picture alone. The minute you try to do it you soon realize how important are such items as pieces of cloth, a dish or two, a sample of clothing, and a good, well-illustrated book as additional avenues by means of which to help subject matter come alive. The material to be included in such kits must be carefully selected to avoid becoming 'gadgets,' and there should always be good potential for display pieces and purposes. Granted all this, however, we think specimens and flat pictures give added value and interest to the use of filmstrips. (When you read this month's reviews, you will see why we are calling all this to your attention.)

*Great Study Prints* (a set of individual prints, approximately 21x26 in., color; available from Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$1.95 each, minimum order of three prints). A short time ago we called to your attention a set of study prints we liked. Again we take this liberty, for we find another of our filmstrip producer friends offering a series of prints that are excellent for classroom use. Subjects range from Dufy's "The Concert" to early Christian mosaics. Included are examples of the work of Cassat, Corot, DeHooch, El Greco, Modigliani, Klee, Vermeer and many others. These prints are of an excellent color quality on good paper stock and all with potential for room display purposes, exhibits, bulletin boards and as background for discussion of art, artists and art development. They would be very good to use with filmstrips in the same area.

*Britain In The Modern Age* (single strip, black and white; produced by Key Productions, 527 Madison Ave.,

New York 22, N. Y., and available as a public service of the New York Journal American.) The student of current affairs and world history needs to have his attention focused on world topics and problems. In this instance, the pictures serve to point our interest to the nature of parliamentary democracy as it is understood in Great Britain, how this system came into being and how it serves Britain today. Considerable detail is given to the role of the queen and modern economic conditions. This type of filmstrip is actually a visualized newsletter.

*Exploring With Science* (12 shortstrips, color; produced by Encyclopedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$19.90 per set, \$1.66 for individual shortstrips.) If the budding scientists in your class are bursting with questions and eager to do individual research these "shortstrips" are for you. Planned with individual viewing in mind, each strip is 14 frames in length. The science series provides information on what makes seasons and weather, facts about the earth and the solar system, details about how men and animals move and grow, etc. The material may also be projected for group viewing if desired. The set provides a flexible unit of resource data for primary science and can be used many times over.

*Hawaii* (a kit—8 filmstrips, color, 1 double-faced record, 8 samples of realia, 1 study guide and 1 resource book; produced by Wedberg & Associates, 4715 So. Normandie Ave., Los Angeles 37, Calif.) Our newest state has a colorful and wonderful history and this kit supplies us with a wealth of information about it that is very timely. The filmstrips give us the story of how the islands were formed and grew, how sugar and pineapple grow, how the people live and work and something of the arts and crafts. By means of the record we hear something of the typical activities at the great airport of the islands, sounds of the people at work and some of the songs of the islands. The samples of coral and tapa cloth and the books give us added information for further study. This kind of kit gives both teacher and pupils enough material to carry out a really thorough approach to the study of Hawaii and its people and is to be welcomed as a good production.

*How to Conduct a Meeting Using Parliamentary Procedures* (single strip, color, produced by Basic Skills Films, 1355 Inverness Drive, Pasa-

The KEYSTONE Standard Overhead Projector  
is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Standard (3¼" x 4") Lantern Slides, Polaroid Slides, and Handmade Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2¼" Slides, Strip Film, and Microscopic Slides.

It is useful —

In the Science Category with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

In the Mathematics Category in teaching Number-Combinations and Fraction-Combinations tachistoscopically; Solid Geometry with Stereograms.

In the Modern Languages Category in teaching French, Spanish, German and Russian with Tachistoscopic Units.

Write for Further information or a Demonstration by our Local Representative. KEYSTONE VIEW CO., Meadville, Pa. Since 1892, Producers of Superior Visual Aids.

dena, Calif.; \$6.) All future parliamentarians and potential chairmen of meetings should find this filmstrip a valuable training aid (and all of us who have ever tried to run a meeting and keep order will find it a useful addition to have on hand with our copy of Robert's Rules of Order). It gives a good explanation of the basics involved in conducting a business meeting. The diagrams and sketches are clear and the explanatory outlines to the point. This type of material is over and beyond any grade limits and belongs wherever help is needed in clarifying the questions of parliamentary procedure.

*Darwin's World of Nature* (2 strips, color; produced by Life Filmstrips, 9 Rockefeller Plaza, New York 22, N. Y.; \$6 each.) "Darwin Discovers Nature's Plan" and "The Enchanted Isles—The Galapagos" provide a good insight into the work and writings of Darwin the man and they also give us a glimpse of the environment to which he turned for his study and research. Attention is of course focused on how he developed his ideas for "The Origin of the Species" but we also view samples of the species of animal life he studied and can see what these same Galapagos islands are like today. Drawings and photographs are excellent and of value and interest to all science students.

*The North American Buffalo* (single strip, color; produced by National Film Board of Canada and available from Stanley Bowmar Co., Valhalla, N. Y.; \$5.) This producer is to be thanked for giving us a record of the history of one of the animals most important to the development of life on the North American continent. The buffalo has been closely associated with the life and culture of both Indian and white man, and this strip brings us this story. Included is a picture of the area over which the buffalo once roamed, and something of the park areas of Canada and the U. S. where they may be found today. The major portion of the strip deals with the habits and growth of the buffalo, and it will be valuable in social studies and history units and for natural science and conservation work.

*Turkey* (a kit—8 filmstrips with coordinated 33 1/3 rpm records, 16 study prints and 4 realia items; produced by International Communications Foundation, 9033 Wilshire Blvd., Beverly Hills, Calif.; \$58 for complete set, items at prices listed separately in catalog.) The materials included in this kit present a colorful

story of life in Turkey. The filmstrips offer a picture of Turkey's history, life in its modern cities and its traditional villages and the art of the country. The study prints add their pictorialization of geographic features, people and buildings and items of great historic and artistic value. All of the facts and items included in the kit have been well selected to help formulate an over-all picture of Turkey, ancient and modern. The color quality of both filmstrips and prints is beautiful and the unit is one to be highly recom-

mended for use at any grade level at which this particular country and its contribution to world history and culture is considered. We do not like to limit it to any one grade, for we think it has value at many levels. And a visual glimpse of Turkey is of particular value at this time in view of its increasing importance both politically and militarily. Our young people are learning younger these days and this type of filmstrip is a boon in this process of rapid and—we hope—complete education.

and created the binomial theorem.

Newton then turned his attention to the problem of how to find the tangent of a curve other than a circle, a curve with no radius. By November 1665 he had solved this problem and laid the foundation for differential and integral calculus.

Newton is next shown turning his great talent to the study of light. He is pictured allowing a circular beam of sunlight to be transmitted through a glass prism. The light beam, which was transmitted through the prism onto a piece of parchment, became oval in shape, and consisted of varied colors instead of white light. From this Newton concluded that certain of the light rays were bent more than others, and that white light was really composed of many colors of light.

In the next scenes Newton is shown working on a reflector telescope. This, however, he did not complete at Woollestharp Manor. Legend tells us that a falling apple intervened. At any rate, Newton turned his attention to the study of the effects of gravity. He worked long hours and was shortly able to prove by mathematics that gravity held the earth, moon, and planets in space. However he did not

publish these findings until several years afterward.

With the end of the plague, Newton returned to Trinity and his productive months at Woollestharp ended. He resumed work on his telescope. Largely because of this piece of work he was elected to the Royal Society in 1671. In 1684 Edmund Halley, also a member of the Royal Society, visited Newton. He wanted Newton's help in determining the reason for the elliptical planetary orbits. Newton related having calculated this many years before. Halley insisted that he calculate the planetary orbits again and encouraged him to publish *The Mathematical Principles of Natural Philosophy*. In this book, Newton laid much of the foundation of modern physics.

The film then reviews Newton's laws of motion. In the last scene, the film pictures the launching of a rocket and the narrator explains how the laws of motion are related to modern-day rocketry and space research.

#### Appraisal

The reviewing committee feels that this is a superb film. It moves at a rather lively rate and students will discover it interesting as well as informative. Both the science and the mathematics teacher will find that it gives a human touch to rather impersonal scientific concepts and mathematical formulae. It should serve as an excellent motivational device for general science students studying rocketry and the laws of motion. The film could be used advantageously in the beginning physics class as a source of background information preliminary to the study of motion.

—Donald Nichols

### My Own Yard To Play In

(Edward Harrison, 1501 Broadway, New York 36, N. Y.) 8 minutes, 16-mm, sound, black and white, 1959. Price not available.

#### Description

This is a film of children in the dangerous, crowded, dirty environment of a street in a large metropolitan area as they go about the business of play, adapting to and using this environment. Unstructured, without sequence, it is a kaleidoscopic picture of children of several races, approximate ages three through 13. Its title, "My Own Yard To Play In," is the dramatic theme of the film rather than its setting.

There are scenes of children en-

gaged in the traditional games of childhood, playing ball and bat, jumping rope and bouncing balls, in some instances to the rhythm of bilingual rhymes. There are others of children moving in and out of street traffic against the background of street sounds, riding crudely made scooters, pushing box-like carts, riding an automobile bumper in rhythmic motion, sliding down a coal chute, rolling tires and hoops—ingeniously, skillfully. Still others show them drawing pictures on a brick wall and on the street, making music with sticks struck against an iron fence, hopping up and down on steps in a doorway. And there is a scene of boys engaged in a wooden gun battle, their movements a ballet in miniature.

The children's voices and words, even more than their activities, reveal the creativity of their play. A child circling a striped barber pole says, "I am a monkey climbing upside down." Another explains, "We pretend the street is water and we are ships and we go back and forth on it." Of a rubble heap one child says, "We pretend this is a jungle." "The sand in the pail is a cake and we decorate it with leaves," says another.

Only the singing, the laughing, the shouting, the speaking voices of the children are heard in the film. There is no narration to interrupt the flow of action. Thus it has a quality of spontaneity and naturalness not often seen in films of children.

#### Appraisal

This film is a brief but exceptionally revealing glimpse into the secret world of children. It captures, in a few short minutes, insights into children's creativity which are possible only through long, patient periods of firsthand observation. Yet because it is so revealing of children's creativity, the theme—the need for private yards to play in—does not emerge strongly. The hazards of the street environment and the need for a safe place to play are obvious, to be sure. But these facts lose some of their impact in the face of the many evidences that the environment stimulates children's creativity. The fact remains, however, that whether or not the film conveys the need for safe playgrounds for children, its contribution to the field of child study is undeniable. It is, without question, an informative, fascinating documentation of the ways in which children adapt their play to their environment. All persons concerned with studying the behavior of children will find this film of considerable value.

—Helenka Sagl

# AUDIO

by Max U. Bildersee

## Audio Variety in School

Have you given special attention to the particular services which the audio media and materials can give in the areas of vocational instruction? There is much to be done here that's worthwhile from both the standpoint of the teacher and the student.

Classes in stenography need the help we can give them. There aren't enough recordings available commercially to help the teacher in the area of dictation. More must come, but meanwhile we as materials specialists can do much to supply these materials through locally prepared tape recordings.

Here in a true sense the recording becomes an 'assistant teacher.' Instead of standing before a class of students reading at the prescribed rate of speed, the record player (tape or disc) can be doing the 'reading' loud enough for all to hear—and fully standardized throughout the classroom. The teacher? The teacher is free now to move from desk to desk supervising learning, helping the students who need help, encouraging, improving the work being done. The teacher thus is free to teach!

Are these tapes 'used once and gone'? Not a bit of it—they may be used again in class exercise and they may be used by individual students for individual practice. In some instances it may be practical for students to borrow records, preferably discs, to take home either voluntarily or on assignment to work with over weekends, holiday periods and even just overnight. Practice and more practice is the key to success in this learning endeavor, and the recording can offer this facility as no other medium can.

The recording can offer *variety* of experience, too. Effective use of the tape recording can bring many different voices, spoken emphases, timbres, accents and rates of delivery to give the students broader training. The principal as well as many teachers can and should be called upon to prepare tapes for these practice teachings.

Advanced students can be given specially prepared tapes to transcribe into letters for signature and mailing.

These tapes perhaps will see limited use, but the faculty can thus be given added access to desperately needed secretarial assistance and the students access to equally needed variety of experience.

What is the 'drop-out' rate in your school in stenography courses? Nationally, we are told, it is a shocking 50 per cent between Shorthand I and Shorthand II. This can be corrected so that 80 per cent or more of the students now starting the shorthand courses can complete the full sequence of instruction successfully.

Only in shorthand? Not on your 'tintype'. The variety of business courses taught in every school can be made more valuable and satisfying through the effective use of audio materials. Speech courses are part of business training, and here the remedial uses as well as the exemplary uses are obvious. Is there a course in retail selling in your school? Can't you see the development of a series of short skits demonstrating the many points made by the instructor?

An important aspect of every 'office practice' course is telephone usage. Here too the tape recorder plays an important part. Did you know that the telephone companies, in training local operators and customer's relations personnel, use this device extensively? Did you know that some phone companies make it a practice

to supervise their employees by tape recording? Why not adapt these ideas to instruction to give it vitality, to give the student varied experience and to help the students prepare themselves better for the problems they will face in the business world? Telephone manners do not come about by accident—and good telephone habits should be developed in the school training.

Salesmanship instruction should involve considerable self-appraisal through recordings and class appraisal through student made tapes or through faculty prepared tapes designed to underscore particular traits of excellence. More and more the business world relies on aural communications, and the students must be trained through constant aural practice to improve communications skills.

Is it impractical for the guidance counsellor studying the aspirations and problems of business students to re-

Audio CARDALOG — Box 1771, Albany 1, New York

— A WORLD OF SOUND ON FILE —

cord a simple interview? This recording can be reviewed by the faculty, it can become part of an 'interview package' supplied to prospective employers and can be used by the student himself to re-examine and realign goals that are worthwhile as well as personal weaknesses and strengths.

Finally, and of no mean importance, the cultural development of individual business education students must be

enhanced. It is not impractical—it is desirable—to give these students every opportunity alone in class to hear the world's greatest literature as it has been recorded by master performers.

The 'listening corner' we have so long advocated for the school library can become an essential portion of the business education laboratory as well. The capable student seeking enrichment—or the less capable student who may also seek this growth—can use the facilities to best advantage. This need not disturb other students, but within the limits imposed by available equipment and records each student may be served and served well. Of course this presupposes opportunities for 'solo' listening without disturbing classes in session or neighbors a few feet away; it presupposes the use of headphones rather than loudspeakers.

Is your school equipped with a 'language laboratory' in use only part of the time? Is this not a logical expansion of the applications of this expensive equipment—to the benefit of the students? Thus may your limited purpose language laboratory begin to serve as a listening laboratory and begin to serve the broad variety of educational objectives which are inherent in audio training.

### Plastic Jacket Covers

Looking for something new and different? Looking for a way to protect your record collection and make it more accessible? Are you having trouble (too) with unsubstantial record envelopes? Are you finding it increasingly difficult to repair, repatch, renew and reuse the envelopes which were never designed for the hard usage

given them in schools, colleges and libraries?

There is an answer! It is new, and worth your investigation. Vinyl plastic phono jacket covers are now being marketed by Bro-Dart Industries (59 East Alpine Street, Newark 5, N. J.) and tear sheets describing them should be available soon. This is worth writing for, *today*.

The jackets were developed in response to a need expressed by libraries circulating recordings. Librarians criticized the earliest hand made models and were instrumental in determining the changes needed to make the jackets most useful. The jackets then were prepared in limited quantities and were tested under actual library conditions in Newark and New York City, and now they are being used extensively by these libraries as well as by the New York State Library.

The edges of the vinyl plastic jackets are welded and whole unit takes very little more shelf space than does the usual record sleeve. The commercial sleeve is used to identify the record and the usually colorful record jacket is enhanced by the holder while the plastic protects it from soiling and tearing.

Once placed in the sleeve the record is ready for regular handling and circulation without reinforcement, mounting in special record albums, or extensive hand lettering. The identification is visible immediately. The records take very little additional shelf space and may be located instantly. Thereby the inconvenience of 'thumbing through' a large record collection is eliminated.

We asked questions about these new jackets, and the librarians we talked to were very enthusiastic about the quality and the utility of the product. One librarian happily pointed out that these new jackets are practically self-supporting because they not only reduce dramatically the time and money spent on repairs but also lessen the 'make-ready' time between record procurement and record availability. They thereby save money, and headaches.

From our observations this must become a widely used product. We suggest that you get the Bro-Dart tear sheet mentioned earlier and seek similar data from other companies such as Gaylord Bros., Inc., (155 Gifford St., Syracuse 1, N. Y., or 25 N. Aurora St., Stockton, Calif.) and Leslie Creations (Lafayette Hill, Pa.).

course in Spanish for elementary grades. "Gloria and David" consists of 14 10-in. 33.3 rpm recordings and a similar number of filmstrips offered under such titles as: "We Go To School," "At Home," "We Play At School," "We Live in the City," "We Visit the Country" and "Colors, Numbers and Objects."

This excellent series of recordings is designed for use with the youngest school children capable of learning a new language. It can be used effectively as early as the upper primary or lower intermediate grades, but may be more profitably introduced at the upper intermediate level.

The 519 Spanish sentences which make up the series of records affords the child a basic vocabulary of considerable breadth. Ernest F. Haden of Austin, Texas, says in the foreword to the Teacher's Study Guide: "The series was especially designed for children in grade one through six, although it has been used effectively through grade eight. The original series was designed to teach English to Spanish-speaking children. The success of the English series with students at all grade levels . . . prompted the production of a counterpart directed to the teaching of Spanish to English-speaking children."

The detailed study-guide supplied for the teacher is worthy of mention because it is designed expressly and particularly for "elementary school teachers who have had no previous Spanish language teaching experience."

Because of the length of the course presented in this series it cannot be programmed for complete use in a short period of time. Rather it will take at least a full school year for the more gifted children to comprehend and then to command this material. It is more suitable, undoubtedly, that the learning experience be planned for a longer period of time, approaching two full years, at the end of which the students should have some facility in the use of the language for communications. We do not consider it weakness that no stress is placed on learning rules of grammar, but rather consider it strength that the individuals preparing the recordings/filmstrips believed that learning to communicate verbally was the prime objective of language instruction at this level.

The entire series is based on the interests of children and should prove very valuable in direct instruction in the classroom in which the teacher may participate as another student, as a supervisor or as an instructor.

The variety of foreign language records, particularly Spanish, for elemen-

**ORR INDUSTRIES INC.**  
Opelika, Alabama

tary instruction continues to expand. In addition to the recordings mentioned above, and those reviewed earlier such as "Spanish For Children" (Ottenheimer: Publishers, 4805 Nelson Ave., Baltimore 15, Md.), there is a new series released late in December entitled "Speak My Language—Spanish For Beginners." It is offered by Dover Publications (180 Varick St., New York 14) and is the work of Mrs. Mirjam Ahlman and Zenobia Gilbert who are both on the staff of the Sewanhaka Central High School in New York. Miss Gilbert is coordinator of foreign languages there and Mrs. Ahlman is production director of educational station WSHS-FM. These scripts were originally produced for broadcast presentation and have been heard over the facilities not only of WSHS-FM but also of the stations carrying the programs of the Empire State FM School of the Air.

Interest in language records is not limited to modern tongues nor to elementary grades. Caedmon Records (277 Fifth Avenue, New York 16) reports renewed interest in their "Gold-

en Treasury of Greek Poetry and Prose" read in Greek by Dr. Pearl C. Wilson of Hunter College. This exceptional recording which will interest secondary school and college teachers of the classic languages, includes "The Iliad, Book I, Lines 1-303," "The Odyssey, Book I, Lines 1-10; Book V, Lines 201-224; Book VI, Lines 20-68; and Book XI, Lines 471-491." In addition, the recording includes "How the Sun Returns to the East" by Mimnermus, Sappho's "Hymn to Aphrodite" and "Love Stung by a Bee," which is one of the earliest examples of humorous light verse. The recording closes with a reading of the "Allegory of the Cave" taken from Book VII of Plato's "Republic."

Another of Caedmon's older but superior releases worthy of the attention of language instructors is "German Lyric Poetry" (TC 1072) read by Lotte Lehmann. Poets represented in this recording are Goethe, Morike, Heine, Rilke and Muller. Miss Lehmann also reads the monologues from Act I of the opera, "Der Rosenkavalier" by Hugo von Hofmannsthal.

## NEW EQUIPMENT

### CAMERAS: STILL

#### Polaroid

A whole group of new Polaroid developments provides a major extension of picture-in-a-minute applications. A new 3000-speed film is reportedly fifteen times as fast as the Polaroid 200 panchromatic, free of excessive grain, and available in both Land camera sizes. The new film is said to be so fast that flashbulbs are not needed for indoors photography in daylight or even twilight. The 8-exposure rolls are priced at \$2.29 and \$1.79 respectively.

To fill in the shadows and evade the "pools of illumination" effect of ordinary room lighting a 45-volt battery-powered "wink light" (\$17.95) may be attached to the camera. It flashes gently each time the shutter is pressed. The battery is said to be good for over 1,000 flashes, equivalent to over \$100 in flash bulbs. Included, also, to handle lighting situations beyond "wink-light" power is an AG-1 flashbulb unit with a silver-dollar size adjustable reflector. A 4-stop neutral density filter also comes with the kit for users of the 3000-speed outdoors who do not have the new Polaroid photo-electric shutter.

This shutter (Model 440, \$39.95) converts existing Land cameras (except the Pathfinder and Highlander models)

to automatic picture taking. With the photoelectric unit latched into the camera's shutter and the focus scale set at 6 feet every picture is automatically sharp and correctly exposed. The automatic shutter's  $f/54$  opening is so small that everything from  $3\frac{1}{2}$  feet to infinity is in focus. The meter locks for special effect readings, and flashes a warning against chance under-exposure.

The fourth new unit, Model 625 ex-

Polaroid's Photoelectric Shutter

posure meter (\$16.95), while especially suited for use indoors with the new 3000-speed film, may be used with any Land or conventional camera. It clips directly to the accessory shoe, reads in EV numbers, and may be set for film speeds ranging from ASA 12 to ASA 12,000.

A new carrying case has been designed to accommodate the camera

with its new 3000-speed accessory group. Only four inches deep, it has a drop-open front door which serves also as a picture coating and straightening board and a storage space for freshly coated pictures. Model 383 (\$19.95) does not accommodate the photoelectric shutter—unadaptable to Model 80 or 80A cameras. Model 310, for all other Land cameras, \$21.95.

For more information circle No. 101 on return postal card.

### CAMERA ACCESSORIES

**Lighting Equipment.** 4-light bar in metal case \$9.95. 2-light \$7.95. 500-watt reflector with barn doors \$23.50. SMITH-VICTOR.

For more information circle No. 102 on return postal card.

**Miniature Fold-away Flash Gun**, smaller than a package of cigarettes. Folding 3" reflector; push-button bulb (M5-2-25) ejector; built-in lamp tester; clip and detachable cord mounting; \$4.95. GRAFLEX

For more information circle No. 103 on return postal card.

**New fast color reversal film.** 16mm & 35mm Daylight type SO-260 has normal exposure index (160) comparable to the fastest black and white cine films now used. A companion tungsten-balanced film, Type B, SO-270, has a normal exposure index of 125. Adequate sharpness, moderate grain pattern and good color, inter-cutable with scenes shot on slower finer-grain color film. KODAK.

For more information circle No. 104 on return postal card.

**Triplex Animation Stand.** Basic stand now larger, covers up to 30" field, \$995; with compound camera carriage and peg track table top, \$1495. Platen \$80; Underneath Light Box \$95; Top Lights \$95; Rotary Table \$300; Motorized Zoom \$280; Shadowboard \$55; Column Tilting Mechanism \$265; Dovetail Camera Mount \$290; Pantograph Unit \$85; Floating Unit \$150; Floating Pegs \$95; Copying and Enlarging Head \$475. New illustration booklet free. FLORMAN & BABB.

For more information circle No. 105 on return postal card.

**Wide Angle Focusing Mount Lens** gives 100-degree angle of view at full aperture ( $f/8$ ). Schneider Super Angulon, 65mm, for use on Graphic cameras. GRAFLEX.

For more information circle No. 106 on return postal card.

### SOUND EQUIPMENT AND ACCESSORIES

**Dual-30 Stereo Power Amplifier** is essentially two Marantz Model 5 units

New Polaroid Accessories and Film

on one compact chassis. Built-in meter and test switch provides adjustment of each output tube, bias makes matched tubes unnecessary. 13½" x 7¼" x 10½" overall. Wt. 55 lb. \$237; gold finished perforated grille \$9. MARANTZ.

For more information circle No. 107 on return postal card.

**Hosho Tape Recorder.** Model 105. Twin speakers, remote control, magic eye level indicator, earphone, extension speaker jack, extension audio cable, input for recording direct from radio, etc. 18 lb. \$129.95. HOSHO.

**SIMPLE | EFFECTIVE | DURABLE |**

"Gramdeck" converts any record player into a tape recorder by fitting tape-deck over spindle like a record; pre-amplifier control unit battery power-

The "Gramdeck"

ed, transistorized, two printed circuits, four position control—radio record, microphone record, playback and off; plays through radio or phonograph \$49.75. MERRYFIELD.

For more information circle No. 109 on return postal card.

**Mobile P. A. Amplifier** 25-watt, operates on 6v or 12v auto battery, plugs into cigar lighter on dash, uses less current than parking lights. 100 to 10,000 cps. Wt. 9 lb. Separate inputs for microphone and phonograph. Output impedances 4, 8, 16 ohms, \$79.95, batteries (2) @ \$3.76; record player extra \$23.95. ALLIED.

For more information circle No. 110 on return postal card.

**Stereo Phono-Radio** 4-speed automatic player; AM radio receiver; 3-speaker sound system; \$129.95; companion speaker unit for stereo with own separate bass, treble and volume controls \$49.95. ZENITH.

For more information circle No. 111 on return postal card.

**Stereo-Mono Record Changer**, 4 speed, manual or automatic change, intermix 7-10-12" records, automatic stop. Power consumption 8 watts. \$39.50 NAPHILIPS.

For more information circle No. 112 on return postal card.

**20-Watt Stereo Amplifier.** Dual 10-watt pre-amp sections with inputs for either magnetic or ceramic stereo cartridges. Metal case. \$62.50 ALLIED.

For more information circle No. 113 on return postal card.

### MISCELLANEOUS

**Car-top Clamps**, now of all bronze weatherproof construction, hold camera tripod on top of car or station wagon safely. Set of 3 \$28. CAMART.

For more information circle No. 114 on return postal card.

**Graphic Arts Layout Tools.** Extensive line of cutting and writing implements and holders, including compass, parallel cutter, magnifier, etc. MARK.

For more information circle No. 115 on return postal card.

**Imprinted Film Leader** carries name and address of distributor and instruction as to return, rewinding, head, tail, etc. \$30 per 1,000 feet plus \$10 initial

charge for negative; waived on initial order for 5,000 feet up. CONSOLIDATED.

For more information circle No. 116 on return postal card.

**Lectro-stik Adhesive.** An electric coater reportedly lays down a non-sticky inch-wide coating of dry stick adhesive, peelable if applied by finger pressure, lasting grab if burnished, no clean-up needed. Coater \$5; box of 24 sticks \$2.80 currently included n/c. HALBER.

For more information circle No. 117 on return postal card.

**Circular electronic flash units** designed to provide shadowless close-up light. The units may be fitted around any lens that accepts a Series VI adapter ring. GRAFLEX.

For more information circle No. 118 on return postal card.

**Cropped 2 x 2 Mounts** mask 5/16" off height of normal double-frame 35mm slides. Use to correct excessive foreground or sky, or to create "Cinemascope" effects. 50 cardboard mounts \$2.20. 100 aluminum masks with gummed title labels \$1.50. PORTER.

For more information circle No. 119 on return postal card.

**Custom Printed Film Leader.** Your name and address printed every few inches, with space between for writing in titles. Printed in blue ink for head leader, and in red for tail to help speed film inspection. 2c per foot (less for quantities over 25,000'), plate charge \$16.80 for quantities of less than 5000'. PAULMAR.

For more information circle No. 120 on return postal card.

**Junior Electrol Screen** operates at the flip of a switch. Mounts on wall or may be recessed in ceiling, wall, or behind valance. Price range: \$225 (50" x 50" to \$298 (12' x 12'); ten sizes in between. DA-LITE.

For more information circle No. 121 on return postal card.

**Scenic Roller Screen** economy mounting rolls and unrolls auditorium size screen by means of ropes and overhead pulleys. Price range from \$114 (4' x 10') to \$700 (30' x 30') DA-LITE.

For more information circle No. 122 on return postal card.

**Slide Color "Perfactor."** Graduated color wheel and mounting bracket positioned in front of slide projector lens adds red or blue to image to modify incorrect exposure or create special effects. TIFFEN.

For more information circle No. 123 on return postal card.

**"Telefocal" Projection Lens**, infinitely adjustable 3½" to 6" focal length, for filmstrip and slide projectors, makes it possible to adjust screen image size without moving projector. \$49.50. VIEWLEX.

For more information circle No. 124 on return postal card.

**Tinted Projecto Folls**, transparent, sensitized film in four colors provides ready means of creating special effects for transparencies, overlays, flip cards, etc. Black diazo coating on a .005 acetate base (blue, green, yellow and pink) provides black images. **OZALID**.

For more information circle No. 125 on return postal card.

**Title Slides** readily made with pencil, ink, ball-point or water colors for 2 x 2 projection. 4 for 79c; 25 for \$3.75. **GRAFLEX**.

See your local dealer

For more information circle No. 126 on return postal card.

**Vu-Graph Starter Kit** contains wide selection of tools and materials for making transparencies for the overhead projector. Acetate sheets, mounts, special film, tape, pencils, cleaners, inks (7 colors), adhesive sheets, burshes, etc. in hinged drop-front leatherette case. Set, with case, for 10" x 10" \$45; for 7" x 7" \$35; case only \$9.75. **BESELER**.

For more information circle No. 127 on return postal card.

**CC Video Monitor 17"**, occupies only 14" of rack space, horizontal resolution plus 650 lines and linearity within 2% of picture height claimed. Built in handles. Removable printed circuit boards simplify servicing. All controls are on front panel. **CETEC**.

For more information circle No. 128 on return postal card.

**Tape Cartridge "Magnematic" Slide Projector** accommodates 40 slides (2" or 2 1/4") and up to 1200' of 1/4" tape utilizing 2, 3, or 4 tracks for monaural or stereo play. 500-watt, blower-cooled; 5" f/3.5 lens. Record-Play model puts a 20-cycle note on one track automatically with each (manual) slide change for subsequent automatic play; these signals may be erased and changed without affecting the narrative or music track. **AMPCORP**.

For more information circle No. 129 on return postal card.

**Low-load Dimmer**. Adjustable transformer unit gives variable control of light on circuits carrying up to 200 watts of incandescent or five fluorescent lamps. \$18. Wall plate measures only 5 x 5". Larger "Luxtrol" units provide dimmer control for 450,800 or 1800 watt circuit. **SUPEL**.

For more information circle No. 130 on return postal card.

**Mobile Science Demonstration Table** incorporates an overhead projector complete with 200 science transparencies; completely self-contained with its own water, gas, vacuum, air, and electrical systems for chemistry, physics and biology classroom demonstrations. Readily wheeled from room to room. **LABFURN**.

For more information circle No. 131 on return postal card.

**Three New Lighting Units**. "Cine King" equivalent to 5,000 watt conventional

studio key light \$42.95; "Super Kicker" using up to R-60 (1000 watt) \$29.95; "Kicker Light" 300 or 500 watt R-40 spot or flood \$24.50; all less lamp. Converters \$69.50 to \$269.50. **COLOR-TRAN**.

**THE OLD ORDER AMISH**

The first documentary motion picture to be filmed among the Amish Folk of Pennsylvania Dutch Country, who live in their own little world characterized by bugles, bonnets and beards.

Contains numerous scenes of Amish life, including those inside the home and the one-room school and at barn-raising, farmers' markets and get-togethers.

Amish chants, hymns and conversations in Pennsylvania Dutch Dialect are incorporated in the sound track.

"The film is excellent. It is done in a sympathetic and discerning spirit; its facts are concrete; it gives a well-proportioned picture of Old Order Amish beliefs and life-ways."

## Catalogs on Microfilm

The missiles and aircraft industry reportedly will save in excess of \$60 million a year by use of microfilm catalogs of engineering specifications on all types of components and materials used by manufacturers and designers in that field. The Rogers Publishing Company, Englewood, Colo., has copyrighted for that industry a "product index" which is shown on an Eastman Recordak reader. Similar files are to be completed during 1960 for four other industries.

Expansion and proliferation in the audiovisual industry has long reached a point where preparation and consulting of conventional product catalogs is a frustrating experience. It is questionable whether data on many thousands of items from many hundreds of sources and applied in tens of thousands of differing situations of subject area, grade level, purpose and other utilization factors, can possibly be frozen into fixed film rolls. An audiovisual equipment and materials file by its very nature must be fluid and readily accommodating to new materials, sources and applications. It is not too clear just how this has been solved in the aircraft-missile instance. Perhaps some adaptation of the microcard might help or at least, as a stop-gap, greater standardization of catalog and new product announcements such as has been largely achieved

Rogers' "Product Index"

in the school supplies industry. The 8½x11 format has become pretty well standardized in film and AV equipment catalogs. And standardized punching to fit some sort of efficient expandable binder and a good comprehensive indexing service would be a big step ahead for consumer and distributor alike. There have been composite film catalog projects in the past but none seem to have clicked. Solutions, anyone?

## BFC-NCC in New Home

The National Council of Churches' Broadcasting and Film Commission as well as its Department of Audiovisual and Broadcasting Education are among the 118 program and operational units now housed on four entire floors of the new Interchurch Center at 475 Riverside Drive, New York 27, N. Y.

## Association of Cinema Laboratories

"Fair Trade Practices for Motion Picture Laboratories" is one of the first committee studies to be made in the recently formed trade association, according to Herbert Pilzer, executive coordinator. The officers include Kern Moyses, treasurer; George Colburn, president; Dudley Spruill, secretary; Carleton Hunt, vice-president.

## 120 Biology Film Course

The American Institute of Biological Sciences, composed of 45 professional societies which represent 80,000 biologists, has designated Dr. H. Burr Roney of the University of Houston as project director and principal teacher in a series of 120 instructional motion pictures. The films are to be produced by the Calvin Company and distributed by McGraw-Hill.

## Adapts Standard Projector to TV

The Kodak Research Laboratories announce the adaptation of the standard 35mm projector movement to match the Vidicon tube by alternately speeding up and slowing the Geneva movement. The development, by Dr. Jasper S. Chandler, costs only a fraction of the price of the more complex systems now in use, prevents flicker and produces

very little additional noise or stress on the film.

## Kids Track Satellites

An impressive visual demonstration of the fact that 7th graders of today have to (and do) learn more than their daddies did at college is contained in a "Satellite Tracker" wall chart and accessories, sold for \$2 by Research Publications, Inc., 1687 Laurel, San Carlos, Cal.

## LIFE Filmstrips to EBF

Life magazine filmstrips, 110 thus far produced, will be distributed through Encyclopaedia Britannica Films. Reprints from the magazine are available with many of the strips as supplementary material.

## Eight Years Young

"This Is The Life," religious television film series produced by Family Films for the Lutheran Church—Missouri Synod, is celebrating its 8th anniversary. Dr. H. W. Gockel, religious director of the series, was joined in a cake-cutting ceremony by "Buffalo Bob" Smith, children's idol on the "Howdy Doody" television program, who is to portray a serious adult role in "This Is The Life" episodes to be shown next fall.

Dr. Gockel and "Buffalo Bob"

## NAVA Trade Show

August 6-9, 1960, are the dates. Hotel Morrison, Chicago, the place. The 170 booths are priced from \$246 to \$365. Previous exhibitors have priority on space and a waiting list of new firms wanting in assures an early, complete sell-out, according to Don White, executive vice-president National Audio Visual Association, Fairfax, Va.

## Fitting Memorial

The Jam Handy Organization marks the recent death of its treasurer, Allan Gedelman, with a special 8-page issue of **Closeups**, its house organ. In it the firm's founder, Jamison Handy, and others pen tributes that are rich in human understanding. Gedelman, 54, had been with the firm for nearly 30 years.

← TWO WAY →  
POWER DRIVEN FILM REWIND

Double your film inspection with less effort! Modernize with the proven motor-driven FOSTER REWIND—winds both to the left and right under motor power. Easy to use foot pedal controls both direction and speed of reels (up to 875 rpm). Both hands free for inspection and quick splicing. Capacity to 2000 foot reels. Heavy duty motor—simple design—and rugged construction assure maintenance free operation. Rewinds 16mm—35mm—8mm motion picture film.

Write for details and Special Trial Plans.

## Shhh... New Kalart/Victor Is So Quiet You Barely Hear It Run

Here is the quietest running 16mm sound projector ever built. Noise level is reduced to the point where it *never* distracts audience attention. But that's not all.

The new Kalart/Victor increases light output by at least 12%, thanks to a redesigned shutter. It accepts a 1200 watt lamp for even more light on screen. *Sound quality is magnificent.* A 15 watt amplifier, audio-engineered for greater power and low distortion, results in sheer listening pleasure. Entirely new in projector setup is the Kalart/Victor *door-mounted speaker*. It can be

left closed on the projector while running—or detached and placed next to the screen. Still picture projection is vastly improved. Stills are *five times brighter*, with special glass heat filters provided as standard equipment. Maintenance is greatly simplified, too. Lubrication is required *only once a year*. Built-in oil reservoir holds enough oil to last for 1000 hours—or a year of heavy use without refilling.

Hear—and see—the new Kalart/Victor Model 70-15 yourself. Ask your authorized Victor Dealer for a demonstration soon.

# Two ways GRAFLEX® helps you improve teaching effectiveness

Never has it been so essential to maintain and increase the effectiveness of educational methods. To help meet this need, schools are turning with increasing frequency to proven audio-visual equipment. The School Master Filmstrip and 2x2 Slide Projector, and the Classic Tape Recorder are two of several Graflex A-V tools designed to supplement classroom instruction with teaching materials that keep interest high and increase student retention.

## *Classic* TAPE RECORDER

Only tape recorder designed specifically for School Audio-Visual Programs

Weighs only 25 lbs. Operating instructions permanently affixed inside lid for quick, convenient reference. Built-in "Gibson Girl" tape splicer. Simple push-button operation. Three-wire safety power cord. U.L. and C.S.A. approved. Tape

storage compartment. Top quality microphone and dual hi-fidelity speakers. Durable, attractive, self-contained carrying case built for the wear and tear of daily school use. \$244.50

Model 750 with semi-automatic slide changer and exclusive rewind take-up (accessories).

## **SCHOOL MASTER®** **Filmstrip and Slide Projector**

Brilliant projected screen images make the School Master the perfect projector for today's classrooms. Simple to operate—any pupil can project either filmstrips or 2" x 2" slides. Easy to clean. Exclusive built-in carrying handle—easy to carry. *Exclusive* accessory rewind take-up rewinds filmstrips into storage container automatically. 500 watt and 750 watt manual or remote control models, prices from \$84.50.

*Prices are subject to change without notice.*

## With the Authors

Donald F. Schutte is director of the audiovisual department of St. Louis Park High School just outside of Minneapolis. He is a pioneer in the campaign to bring the importance of AV to the public and, as stated in the introduction to his story, maintains an effective effort in his area. In his correspondence with *Educational Screen* Mr. Schutte understated the case when he mentioned that there has not been much information in print on audiovisual public relations." We try to rectify this in this issue.

Robert R. Nardelli is principal of the campus laboratory school at San Diego State College, San Diego. The closed circuit television project here is not necessarily one-of-its-kind but it is well conceived and is implemented with good physical facilities.

Janet Reed, a junior at Middlebury College, Middlebury, Vermont, contributed an article to *Educational Screen* in 1958. Her glimpse at the fine arts-audiovisual set-up at the college is a fresh, student's-eye, view of art appreciation in a rustic setting.

Ben Waddell is a member of the Language faculty at Texas Southern University. This school projects its AV techniques into 3-D by literally living the matter studied. Mr. Waddell describes the different approaches the Spanish students use in acquiring a more personal use of the tongue.

# HOW TO TEACH MORE EFFECTIVELY WITH AN OVERHEAD TRANSPARENCY PROJECTOR

*An important visual aids primer -- clip and save it*

As a person who uses and is often called upon to advise in the selection of visual aids equipment, it is essential that you become familiar with the many advantages of overhead projection techniques—how it can make your teaching even more effective, how it helps the student to grasp and to retain ideas, how it increases the scope of your subject matter.

For many teachers the prime advantage of the overhead transparency projector is the fact that it is the only type of projection equipment that is designed to be operated in broad daylight. The ordinary classroom becomes a theater without turning out the lights or drawing the shades. Of course, you must have a projector that provides the maximum screen light required to retain detail and color. Projection Optics' Transpaque Jr., for instance, provides up to three times more light on the screen than any other projector of its type. Transpaque Jr.'s exclusive optical system has completely eliminated a serious overhead projection problem — the distracting rings that have always appeared on the screen.

## Up-Front Projection

With this teaching tool, both you and the projector are at the head of the class. As you teach, you face your students. You can gauge their reactions, spot questions immediately; students can take notes and you can refer to yours. Remember, the lights are on! In short, with the Transpaque Jr. you retain all the advantages of a classroom environment.

The very small profile of Transpaque Jr., especially the projection

head, makes every seat usable. There is nothing obstructing your view of the class. Every student is able to see both you and the screen. The more compact Transpaque Jr. is also easily portable.

Superimpose transparency over transparency, building a progressive story before the eyes of your class. Transpaque Jr. retains the brilliance

and color even through multi-colored overlays. Each transparency has a large 10" x 10" format. You can tailor-make them yourself, simply and inexpensively. You can buy them already prepared, covering a multitude of subjects.

## Write As You Speak

To create large screen images of your notes or ideas, just write in your normal size script on a transparency. It is projected as you write,

just behind you on the screen. You can draw lines, write clarifying remarks, circle areas of special interest. Your individual technique is as unlimited as your own imagination. There is no squeaky chalk or tiresome blackboard work. Use the roll of transparent film. Write on it and roll it away for a continuous supply of clean writing surface.

Transpaque Jr. is UL-CSA approved. It is easy to operate and trouble-free. For a free demonstration or additional information, write to

from afar...  
**they look alike**  
  
**but what a difference in picture quality!**

One is a conventional screen—the other a new lenticular Radiant Screen. You'll be astonished at the difference this new reflective surface makes. Your pictures have more brilliance, more clarity, rich, more natural colors. In addition—the lenticular screen is extremely effective for projection in darkened or even lighted rooms where no extreme or unusual lighting conditions prevail.

# RADIANT'S *new* lenticular screens

for lighted or darkened rooms

Available in Wall Roll-up Screen (Model WEDO) with exclusive STRETCH-BAR that provides an instant flat, taut surface. When not in use the lenticular screen can be rolled up. Washable, fungus and flame-proof. In sizes 40" x 40" and 50" x 50".

Also available—lenticular portable TRIPOD Screens—in choice of two lenticular surfaces—Uniglow and Optiglow.

**Screens for every A.V. need**  
 Every type of surface—wall, ceiling and tripod models—automatic electric—every size—are in the new Radiant Screen line—the world's most complete line of screens.

# On The Screen

## Cover Scene

This is Mrs. Robert N. King, superintendent of the nursery department in the church school of the First Presbyterian Church in Glens Falls, New York. This picture could symbolize many things to many people, but we are struck by two things. We see the church "teaching all nations" and using the most modern and most effective means of doing so. Secondly, we see the generous people who contribute to the church the even more precious commodity of their time.

Mrs. King is shown in the audio-visual library of the church. She has learned of the arrival of some new filmstrips and has come up to preview them in the search for material for her department.

## 20 years ago

John Hollinger's phrase "perceptual learning" endorsed editorially as "perhaps the nearest approach yet made to a correct name for the visual idea in education." Report on a study of the effectiveness of the verbal commentary on a motion picture as delivered by a recording or by the classroom teacher. American Library Association 2-day visual instruction conference.

## 30 years ago

First experiments with "talkies" in American schools. Arrangement with the Academy of Motion Picture Arts and Sciences by which a group of visual education directors in Southern California cut instructional excerpts from the Douglas Fairbanks feature "Robin Hood," prints to be available on long term lease direct to larger school systems or short term rentals through university centers or "reputable commercial exchange located in a key city serving surrounding areas." Charles Roach wrote: "If the proper response is forthcoming, the Academy is in a position to carry on indefinitely, and the schools will have access to a priceless storehouse of film which money cannot buy. The film industry is giving it away as an investment in goodwill." (Ed. note: Indirectly, the "Robin Hood" breakthrough found eventual fruition in Teaching Films Custodians, Inc., a PAA subsidiary.)

## The Passing Parade in Educational Screen

### 10 years ago

DAVI holds 5-day session in conjunction with AASA at Atlantic City: four morning, three afternoon and two evening sessions. Two 15-minute telecasts from Philadelphia schools shown on large screen. NAVA holds a regional meeting concurrently with AASA and DAVI. Minnesota cited as tape teaching pioneer.

# THE BIG 4 OF AMERICAN HISTORY

... an integrated program to breathe new life into the truly dramatic story of our nation's history—to instill pride in our democratic birthright... In this space age, a dynamic presentation of our glorious past is vital to inspire young Americans, with deeper understanding, toward an even greater future.

Created by outstanding scholars dedicated to this ideal, each teaching tool is a key entity, uniquely practical in application. Together, in the teacher's hands, these authoritative books and filmstrips form an unequaled, flexible program in "living" American history. One or all can help you now in guiding our youth to a richer tomorrow.

**AN  
UNPRECEDENTED,  
COMPREHENSIVE  
4-POINT  
PROGRAM!**

## ● THE CHRONICLES OF AMERICA FILMSTRIPS

**A signal accomplishment:** This recently completed series is already winning acclaim all across the nation. Its excellence was made possible by the skill and diligence of its eminent editors; it was economically feasible through the documentary photoplays (10 years in the making) from which it drew most of its valuable source material, available nowhere else.

**The result:** Thrilling "adventures in democracy"; Columbus, the early settlers, the War of Independence, the opening of the West, Washington, Lincoln, the War Between the States—a new, exceptional teaching medium in an unusual program!

**15 UNITS**

\$97.50 complete,  
or \$7.00 each

Comprehensive  
TEACHER'S GUIDE  
Free

## ● THE PAGEANT OF AMERICA FILMSTRIPS

**A landmark in education:** This award-winning series has set an entirely new standard for visual teaching aids. In manner of presentation, in scope of material, no other source compares for realism, scholarship and effectiveness. The dynamics of its message, from American Indian to Atomic Age, is so universal that its value extends beyond history to many other subjects, as well as to areas of civic and patriotic activity.

**30 UNITS**

\$195.00 complete,  
or \$7.00 each

TEACHER'S GUIDE  
Free for Each Unit

*The two series of filmstrips were created under the editorial direction of Ralph H. Gabriel, Sterling Professor of History Emeritus, Yale University.*

## ● THE CHRONICLES OF AMERICA 56 VOLUMES

**More dramatic than fiction:** The great men and women of history emerge as flesh and blood in these intensely vivid and discerning accounts of the forces that have shaped our nation. Each volume was written by a specialist chosen for his accurate knowledge and his ability to present it with stimulating impact. From the early days of the Red Man to the aftermath of World War II, here is spirited history—alive and alert—a wonderful incentive for learning through enjoyable reading.

*Editors*

ALLEN JOHNSON  
ALLAN NEVINS

# YALE UNIVERSITY PRESS FILM SERVICE

386 Fourth Avenue, New York 16, N. Y.

## Texas Colleges Discuss Closed Circuit TV Net

An advisory committee of radio and television executives met at the University of Texas on December 10 to discuss a proposed closed-circuit TV network that would link 11 institutions of higher learning in central Texas.

Under the proposed plan the microwave network would offer credit courses and other educational programs to member colleges. Necessary transmitter towers would be built to link the institutions in the proposed network. The network project is being developed by the university under a contract with the U.S. Office of Education. Under the proposal, programs would originate from university TV studios or from studios of San Antonio TV stations.

## To Search Nation For "Multi-Racial" Photos

Edward Steichen, dean of American photographers, will head a nationwide search for photographs that will dramatize the multi-racial character of America, according to Theodore W. Kheel, president of the National Urban League, the organization which is sponsoring the search. Using the theme, "America's Many Faces," the search will begin on February 1 and continue through May 31, 1960. It is expected that both a photography exhibit and a publication on the same theme will follow the search.

Mr. Steichen is director of photography of the Museum of Modern Art in New York City.

## Jewish AV Group To Present Special Award

The outstanding film and filmstrip dealing with Jewish subject matter and released during 1959 will receive a special award to be presented by the National Council on Jewish Audio-Visual Materials, it was announced by Dr. Samuel D. Freeman, chairman of the board of review of the NCJAVM.

A committee of prominent educators and film-makers will constitute the board of judges. Awards will be made at the 10th Annual Meeting and Workshop of the council in May, 1960. All entries are to be in the offices of the Council by January 11, 1960.

## NEA President Urges Fair Treatment of ETV

The National Education Association has urged the Federal Communications Commission today to require that a fair portion of the prime evening television viewing period be devoted to public service broadcasts, including those with educational values.

NEA President Walter W. Eshelman told the commission that public service broadcasts in the 7 to 10 p.m. period might be regarded as fair compensation by the stations for the use of the airwaves which belong to all the people. Broadcasting stations are licensed to use these air waves "in the public interest, convenience and necessity."

Dr. Eshelman, who is supervising principal of schools at Upper Dublin, Fort Washington, Pa., urged the commission, in considering applications for renewal of TV licenses, to strengthen the standards by which it measures whether the applicant stations have in fact functioned in the public interest. He also urged the commission to give priority to the claims of educational television in all communities where there is already adequate commercial service by two or more commercial stations. Educational stations, he said, have an increasingly important role to play in the education of growing numbers of children and adults.

## B. A. Aughinbaugh 1885-1959

The death of B. A. Aughinbaugh has taken from the audiovisual education movement one of its earliest and most colorful champions. He is known to have begun his use of educational motion pictures and slides in the days when lime-light was the only known projector-illuminant. This was as school supervisor in the Philippine Islands.

For 25 years as head of the Ohio State Film and Slide Service, he built up a library of 6,000 titles, many in multiple prints. When for a time his State Department of Education had no budget for the continuation of his film work he toured the state giving illustrated lectures to raise the funds himself. He authored the book *Know Ohio* and directed the production of 23 sound-on-film Ohio travelogues.

He retired in 1950 but continued active membership in the Department of Audiovisual Instruction, National Education Association, until last year when he was awarded honorary membership in recognition of his past services. He served this professional organization in numerous capacities, the latest as a member of its Committee on Archives and History.

He is survived by his widow, Edith, who through all the years shared fully his labors and enthusiasms. A son, Robert A. Aughinbaugh, teaches school in Mineral City, Ohio.

Dr. William S. Gray, of the University of Chicago, whose many years of leadership in the field of reading have won him the title of "Mr. Reading," is honored at a symposium in Chicago. Speakers were, left to right, Willis H. Scott, president of Scott, Foresman and Company; Dr. Francis S. Chase, chairman of the Department of Education and dean of the graduate school, University of Chicago; Dr. Gray, professor of education emeritus and director of research in reading at the U. of C.; Dr. Austin J. McCaffrey, executive secretary of the American Textbook Publishers Institute; and Dr. Benjamin C. Willis, general superintendent of Chicago schools.

# THE QUALITY OF LEADERSHIP

No. 1 in a series of messages to all concerned with better education

## *Exhaustive curriculum analysis . . . the foundation of all Coronet film production*

Each Coronet film accurately reflects the basic concepts of instruction and effectively fills the teaching needs of its subject by means of exhaustive curriculum research.

Once a topic is selected for possible filming, Coronet's Research Department chooses the educational specialist best qualified to help shape the content of the film. Under his guidance, a careful review is made of state-approved curricula and of major textbooks on the subject. This is compared with the latest literature and educational trends. Months of study, interviews and correspondence with educational leaders take place before the first word of the film's script is written. No Coronet film enters production without this thorough, up-to-the-minute preliminary research to determine specific classroom requirements. Unless this research shows that the film can add a

truly new dimension to teaching, the film project is dropped.

Based upon this thorough, forward-looking research, Coronet has built an unsurpassed library of 16mm instructional films . . . a procedure which is just one of the important elements that give to Coronet Films their quality of leadership.

*This booklet is yours! Send for it today!  
It tells the complete story of Coronet creative  
quality in its library of more than 900  
educational films.*

## CORONET FILMS

To illuminate all facets of learning

CORONET BUILDING

CHICAGO 1, ILLINOIS

**Vatican Film Library**

Pope John XXIII has established a Vatican film library as the latest addition to the Holy See's ages-old record of civilization. Newsreels, documentaries, art films and television kinescopes will take their place as historical documents along with the vast collection of books and ancient manuscripts in the Vatican Library.

The Vatican film library will be under the direction of the Pontifical Commission for Motion Pictures, Radio and Television, of which the president is Archbishop Martin J. O'Connor, rector of the North American College in Rome.

The new library will deal mainly with the preservation of films about the life of the Church. These will include films on the popes, their representatives and the Church administration; the apostolic, charitable, and cultural activities of the Church, and religion throughout the world. Films on art and culture in general also come within the library's scope.

**CINE Shows Venice Award Winners**

The Committee on International Non-theatrical Events (CINE) presented an evening of award winning films from the 1959 Venice International Film Festival on December 10,

1959, at the NEA auditorium in Washington, D. C.

One of the featured films was the winner of the Grand Prix at Venice, an Italian film, *Non Basta sol Tanto l'alfabeto* (The Alphabet is Not Enough) which was brought here from Italy especially for the presentation. American prize winning films exhibited included *Appalachian Spring* by Peter Glushank and Martha Graham; *The Life of the Molds* by Willard van Dyke; *Skyscraper* by Shirley Clark, Willard van Dyke and Irving Jacobi; *Moonbird* by John Hubley; and *My Own Yard to Play In* by Phil Lerner.

CINE is a voluntary group drawn from the non-theatrical motion picture industry and established to select the best American non-theatrical films to represent the United States at international film festivals, principally Venice and Edinburgh.

**New TV Course Readied By U. of Wisconsin**

ATV-correspondence course which will be an advanced study of educational audiovisual methods will be offered in nine areas of the country starting February 1 by the University of Wisconsin School of Education and Extension division.

Current plans for the spring semester, 1960, indicate from 2,500 to 10,000 enrollees. They will be teachers, members of Parent-Teacher Associations, and interested lay people in La Crosse, Milwaukee, Chicago,

**Calendar**

- Feb. 11-13—American Association of Colleges for Teacher Education, Chicago, Ill.
- Feb. 13-17—American Association of School Administrators, Atlantic City, N. J.
- Feb. 18-20—NAVA, Midwinter Conference, Washington, D. C.
- Feb. 20-21—Biological Photographic Association, Southern California meeting.
- Feb. 27-Mar. 2—National Association of Secondary School Principals, Portland, Ore.
- Feb. 29-Mar. 3—NEA Department of Audio-Visual Instruction, Cincinnati, Ohio.
- Mar. 6-10—Association for Supervision and Curriculum Development, Washington, D.C.
- Mar. 24-26—4th National Conference on Aviation Education, Denver, Colo.
- April 10-13—California Association of Secondary School Administrators, Santa Monica, Calif.
- April 19-22—National Catholic Education Association, Chicago.
- April 20-23—EFLA, American Film Festival, New York, N.Y.
- April 24-28—National School Boards Association, Chicago.

St. Louis, Lincoln, Neb., East Lansing, Mich., Detroit, a large area of Florida, and Honolulu.

Local, network and educational TV stations will carry the classes three afternoons a week for 15 weeks. The students will be given tests and projects by the UW extension division, which will handle grading of papers and other administrative functions.

**DAVI Picks Theme For Coming Convention**

The DAVI national convention committee has selected "Concentrating Educational Forces" as the theme of the 1960 convention to be held at the Netherland Hilton Hotel, Cincinnati, Ohio, February 29 through March 4. In selecting this theme, the committee members said they felt it was time for all phases of education to join forces in order to meet the educational demands of our changing society.

The keynote address will be delivered by Ernest O. Melby, professor of education at Michigan State.

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**The Vikings**—In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**A Lesson in Mythology**—Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$7.00. With guide, \$7.30.

**Knights of the Round Table**—A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50.

**Richard III**—Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**Alexander the Great**—Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**Adventures of Robinson Crusoe**—In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$4.00.

**Hansel and Gretel**—In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kine-mins of Michael Myerberg's screen version, released by RKO Radia Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth**—In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**Ulysses**—In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

**EDUCATIONAL & RECREATIONAL GUIDES, Inc.**

10 Brainerd Road, Summit, New Jersey

# No Day Of Rest

The editors of this magazine, since its beginnings, have acknowledged that audiovisual people have religious beliefs, too. We know that most of you attend worship services and believe that your children and your neighbors' children should have the opportunity to learn about religion and develop their own religious beliefs. That is why some of the pages in practically every one of the 384 issues of this professional journal have been devoted to the uses of motion pictures and other audiovisual materials in religious services and education.

We have known and recognized that audiovisual skills and knowledge needed to make best use of AV materials in schools are the same that are needed in religious education. It followed naturally, then, that a good and useful audiovisual magazine should provide for continuous interchange of ideas and experience for all kinds of groups in all kinds of learning situations. So that's what we've done and what we shall continue to do.

Proud as we are, however, of the contributions this magazine has made to the developments in the audiovisual field, that isn't the main point of these comments. We want to make a special appeal to every teacher, supervisor, and school administrator, who knows about the value and use of audiovisual methods in secular education, to make greater contributions of this knowledge and experience to the church of his faith.

We know of AV people, and maybe you do too, who say in effect, "I'm entitled to my day of rest, too. I don't want to be working at audiovisual every single day of the week!" But there are real contributions that this person can make that even he shouldn't consider as work. There need be no day of rest for audiovisual materials.

In many instances, all that is needed is just a little more knowledge and understanding about audiovisual materials. The right word to the right person at the right time might start some thinking and doing. Information about materials and their sources placed in the hands of teachers and religious leaders might stimulate action. What you know about audiovisual equipment and how to maintain it in best condition may be the knowledge needed to get an audiovisual program rolling. Or it may be your administrative skill that is needed to draw up the plan and chart the procedures.

Don't commit yourself right away, if you don't want to; but we do urge you to give this some serious thought. Think about the various group learning situations at your church that could be made more effective through the use of pictures or recordings. Try to figure out what the specific blocks are that are preventing the introduction and use of audiovisual methods. You could work with others to find the ways for eliminating those obstacles and putting AV tools to work on the seventh day of the week. And don't be trapped by that tired excuse about lack of money. Remember that in this country there is always enough money for anything the people really want.

In the decade just passed, there was phenomenal increase in the use of audiovisual materials and equipment in religious education and worship services. With your active assistance, progress during this new decade can be even greater. We're going to help, too. You can count on *Educational Screen's* continued assistance in sharing with you the inspiration and experience of others.

*Paul C. Reed*

**Kodak**  
TRADE MARK

(Woodrow Wilson Jr. H. S., Wyandotte, Mich., L. D. Murphy  
ected), AV Director for the Wyandotte Schools, tells how:

**“Our classrooms put conveniences teachers need at their  
finger tips . . . So, too, do our Kodak Pageant Projectors.”**

“Before approving plans for our building, we asked our teachers what they needed to teach most effectively. As a result, we have built display cases, file cabinets, and flat storage drawers in every classroom, and project rooms adjoining most classrooms. When it comes to showing educational films, our teachers want and get the same kind of finger-tip convenience from our

Kodak Pageant Projectors.”

Put control and convenience at the finger tips of *your* teachers with the Kodak Pageant 16mm Sound Projector. Folding reel arms and attached drive belts make the Pageant easy to set up and use. Ask any Kodak Audio-Visual Dealer for a demonstration at your school. Or get details by writing for Bulletin V3-22.

*Kodak Pageant Projector* > **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

# Fine Arts in the Green Mountains

by Janet S. Reed

"Middlebury College is located on a broad hill overlooking a typical Vermont village and a wide sweep of the Champlain Valley, with the Green Mountains visible to the east and the Adirondacks to the west. . . Middlebury is halfway between Rutland and Burlington, Vermont."

Thus the location of Middlebury College is described in the 1959-60 issue of the catalog.

More exactly, Burlington and Rutland are each 35 miles from Middlebury. Williamstown, Massachusetts, is about 90 miles to the south. Glens Falls, New York, is 70 miles to the southwest. The nearest large city is Boston which is 200 miles distant. New York City is 245 miles away.

Just what does this information have to do with the methods of teaching fine arts at Middlebury? Precisely this: a college which is located in what might be termed a "remote" spot presumably cannot take advantage of cultural opportunities which cities afford. While studying fine arts a student cannot board a subway or bus and go to an art gallery to see an original Rembrandt or Degas or Klee.

Middlebury College has not said, "We have no art galleries here, therefore we cannot offer fine arts courses." Quite the opposite is true.

With the aid of projected pictures the college Fine Arts department and its faculty of three is able to offer a wide scope of courses, especially for a college with an enrollment of 1200 undergraduate students. Courses are taught both in art history and practical fields. For example courses are offered in the history and theory of both Western and Eastern art, in the history and genesis of American art, in Italian Renaissance art, in modern architecture and modern art. Practical courses are also offered in design, charcoal drawing, oil painting and water color.

Facilities for the study of fine arts are located in Carr Hall, completed in 1951. This building contains two lecture rooms, a library, a large studio and office space.

Our major concern, though, is with the course in art history and how they are taught—minus the benefit of nearby art galleries and museums but rather through audiovisual methods.

The structure of all of these courses is basically the same. Textbooks or outside readings to be done in the library provide a background of materials to be covered in class. Classes meet either three times a week for one hour or two times for one and a half hours. The professor lectures, assisted usually by the use of color slides. These slides provide the backbone of the courses.

An integral part of each hour test or final examination is the identification of pictures pro-

The statue pictured is a 6 in. high piece from the Belgian Congo, made by a member of the Baluba tribe. This is the type of work shown in some of the slides used by the Middlebury College Fine Arts department. A close-up, right, of the same statue shows how detail can be shown clearly via photograph-slide.

Professor Healy shows slides for identification during an hour examination.

Carr Hall, completed in 1951, is headquarters for Middlebury's Fine Arts Department.

jected on the screen. During these tests the professor will show each slide to be used, usually six to ten in number, for one minute apiece. This enables the student to see the scope of the slides to be used on the test and to decide which ones to write about, as a choice is usually given. Each slide is then shown for five minutes during which time the student is asked to name the building, sculpture or painting, the artist and approximate dates of rendition and to discuss the picture as to style, relation to specific periods in art history and so forth.

But the primary use of the slides is for class lectures. During his talk, the professor shows slides to illustrate the material. Sometimes enlarged sections of paintings are shown which allow the student to see details he might have missed in the slide of the whole painting or even in viewing the original.

The Fine Arts department in Middlebury has a collection of about 10,000 slides collected over 15 years. These range from slides of Greek architecture and sculpture through the most modern paintings.

The oldest slides, mostly of classical works, were conscientiously gathered by former classics teachers. The efficacy of these slides is limited by the fact that they are somewhat antiquated and the colors are beginning to fade. The College Art Association contributed more than 4,000 slides, all mounted and catalogued. In this collection are works of art from the year 1400 to the present time.

The Fine Arts department has also bought slides from year to year from regular department budgets. Two to three hundred dollars are thus spent each year to fill in the gaps. The most recent acquisition is a collection of color slides of American art from The Carnegie Corporation. Faculty members and former students have contributed slides they have taken on trips to European art galleries and other parts of the world.

Occasionally, the Fine Arts department can take advantage of traveling exhibits of the Museum of Modern Art in New York City. In the fall of 1958, for example, the college had an exhibit of Japanese architecture.

Middlebury's location does not mean that students do not go to galleries at all. The class in the "History and Genesis of American Art" goes to the Sterling and Francine Art Institute in Williamstown to view the small collection of American paintings there. Students who live in the Boston, New York or Washington, D.C., areas often visit the large galleries during vacations. One student, while doing a term paper on Albert Pinkham Ryder last year, took advantage of a special exhibit of Ryder's paintings at the Museum of Fine Arts in Boston.

Student reaction to this method of teaching fine arts is good. They may not go to art galleries while they are actually taking a course, but their appreciation of art, gained through the projected pictures they see, provides pleasure and also a background of understanding of art for visits to art galleries when they are not in school.

The audiovisual method used in teaching the art courses at Middlebury is probably a principal reason why the courses are so popular and the enrollment in them is so high.

In the promotion of its 'live' study of Spanish, Texas Southern University uses planned activities and also the oral-aural technique of the language lab.

# Classroom Spanish Comes Alive

by Ben Waddell

The gap between theory and application in modern education offers a challenge to today's linguist, but a university Language Club in Texas has sought to narrow the gap by means of incorporating real-life activities.

In the spring of 1959 teachers and exceptional students of Spanish at Texas Southern University organized a Spanish club under the sponsorship of Otto Ramsey, an associate professor of foreign languages. Their objective was to acquaint students of Spanish with customs and mores of Spanish-speaking people and to create an understanding and an appreciation of Spanish values.

The club became aware of the linguists' argument that a language cannot be separated from its people. In justifying the argument, the club employed the cultural concept and achieved its goal by actually living the language. Recordings, moving pictures and other audiovisual aids played a part in the group's accomplishments.

This endeavor has been achieved through successful planning of Spanish activities and by carefully planned laboratory techniques. The club's activities have great variety. They range from programs to *tertulia*, a friendly evening home gathering which features simple Spanish conversation, games, music, dancing and other forms of entertainment. Perhaps, the best affair is Pan-American Day which is celebrated with an all-university assembly program conducted in Spanish. The program includes speeches, songs, dances, readings, etc.

Spanish fiestas provide an opportunity for students of Spanish to speak the language with students of similar interest. However, the most progressive technique used by the club is known as the "lab approach." The laboratory procedure makes extensive use of oral-aural techniques and audiovisual aids. Professor Ramsey says, "We learn by imitating, and the oral-aural method has proved to be a successful technique in language teaching."

Recordings for the oral-aural method are made by the teachers in conjunction with the students' textbook. Since lessons are made from textbooks students may use their textbooks as guides. Therefore the student may listen to the recording while simultaneously reading the language in his guide. By reading along with the recording, the student can verify the pronunciation of new words.

Multiple-jack sets are used which enable several students to listen to one machine simultaneously. Bothersome noises are also minimized through the use of earphones which muffle outside disturbances.

"The club has made tremendous progress in its short life," enthuses Dr. Albert H. Berrian, department head of Foreign Languages. He asserted further that the program of the Spanish Club is consistent with modern trends in the area of foreign languages. As a result of the club's activities some students have received scholarships. Also the club has exchanged students with the University of Madrid in Spain.

Because of sound teaching and the use of appropriate audiovisual aids, the study of Spanish at Texas Southern University is very much alive.

# CCTV: Campus Lab for Teacher Education

by Robert R. Nardelli

CLOSED circuit television began at the San Diego State College campus during the 1958-59 school year with the completion of a system which related 26 college classrooms, 11 classrooms in the campus laboratory school, and a studio in the Speech Arts department.

A growing enrollment and the demonstrated instructional possibilities of instructional television were factors which prompted this investigation. Also, the California State Department of Education had indicated considerable interest in a project to study the possible contribution of a campus laboratory school to teacher education through this medium.

Facilities were available in the campus school and in neighboring school districts for observation by students of teacher education. However, there were problems of time involved in leaving the college class for such observation. Overcrowding of elementary school classrooms by large college classes also presented a problem. Consequently, it was decided to begin television programming on a restricted basis although some limitations in equipment were apparent at the outset.

## *A Description of the Facilities*

The project was made possible through the cooperation of the Speech Arts department of the college. This department made equipment available to supplement the equipment belonging to the Division of Education. More important, the Speech Arts department provided the necessary technical assistance to produce the programs, which were directed by the school principal.

An outstanding feature of the television system at the College is the well-equipped studio of the Speech Arts department. This studio is capable of various functions, and includes the following.

1. Three broadcast standard vidicon studio camera chains.
2. A film chain, consisting of two film projectors and one slide projector.
3. A kinescope recorder.
4. A microwave link for televising through commercial channels in San Diego.
5. An electronically controlled lighting system.
6. A rear screen projector.

The campus laboratory school closed circuit television system operates as a radio frequency distribution system rather than by video distribu-

The main broadcasting studio at San Diego State College. Operators of equipment are students enrolled in the television workshop.

A view of the studio's control panel and the students who operate it.

tion. Further, the campus laboratory school system may operate independently or as a part of the College-wide system. At the present time there are sixteen 24-inch console model home television receivers used for classroom viewing.

Among the items of equipment in the Campus School are one viewfinder industrial camera chain and one TV-eye industrial camera.

The camera work was done by graduate and undergraduate students in the broadcasting curriculum, under the supervision of Speech Arts Department faculty and technical staff members.

#### *The Instructional Program*

Implementation of the study was preceded by the formulation of these broad objectives:

1. To study the use in a campus laboratory school of closed circuit television for purposes of teacher education.
2. To determine the types of demonstration lessons most helpful to a professor of education in illustrating vital points in the theory of teaching elementary school subjects.
3. To determine personnel requirements and study appropriate teacher load in demonstration work for television.
4. To explore technical and operational problems involved in the use of closed circuit television for teacher education.
5. To be of service to other institutions of higher education by adding to the growing body of information on television instruction.

#### *Campus Laboratory School Faculty*

Initially, members of the Campus Laboratory School faculty were queried regarding their willingness to participate in closed circuit television demonstrations. All members of the faculty indicated interest in the program. The second grade was selected as the primary level grade because this grade already was being used for demonstrations for classes in methods. The fifth grade was selected as the upper elementary school grade in order to give the program additional balance.

#### *Instructional Faculty*

The next step was to inform members of the instructional faculty that demonstrations by closed circuit television would be available to them. From the beginning, great care was taken to assure the various professors who indicated an interest in the project that the Campus Laboratory School was hoping to provide a useful and significant supplement to their instruction through planned demonstrations of teaching techniques which would be helpful to their college students. These demonstrations should apply to the topics currently under discussion in the class and should not be random type lessons.

It was believed that best results would come from demonstrations planned jointly by the professor and the demonstration teacher in the campus school. Consequently, those professors who responded were asked to meet with the demonstration teacher to plan the lesson in advance. Some professors were content to indicate their needs in rather broad terms. Others were specific to the degree that they provided exact outlines of points they wished to see illustrated with suggestions for experiments to be demon-

strated and materials to be used. Ample time was provided to the professors and demonstration teachers to plan the lessons adequately.

#### *Length and Type of Lessons*

A major decision was to limit each lesson to 20 minutes. The short demonstration period enabled the professor to prepare his students in advance, and to follow up the demonstration with a complete evaluation in terms of the topic under study. It was decided that only instructional techniques involving overt and easily observable participation by teacher and pupils would be employed, leaving the children to complete their seat work and more quiet types of activities after the conclusion of the demonstration. (Observation of children reading quietly at their desks is a pleasurable experience to their teachers but may be of questionable value to teachers in training.)

#### *Preparation of Children*

Before the demonstrations began, a television camera and monitor were brought into the classroom for the children to see. They were told they would be participating from time to time and were informed of the purpose of the work. The children then were allowed to see themselves in the monitor and wave at the camera in order to get that human foible "out of their system." They were urged to ignore the camera and to concentrate on the business at hand.

#### *The Lessons*

Following are examples of lessons requested by various professors: (1) Arithmetic (measurement of liquids and solids); (2) Reading (word analysis); (3) Science (critical thinking, displacement of fresh and salt water); (4) Reading (preparation for reading in the content fields); (5) Social Studies (solving of problems in harbor traffic through dramatic play); (6) Child Growth and Development (levels of maturation).

The number of children employed was limited to ten, except in the cases of the social studies and child growth and development demonstrations. The reasons for this limitation were technical rather than professional. It proved too difficult to cover great numbers of children with the available camera and to hear adequately with the available audio system.

#### *Evaluations by Professors and Students*

Professors and students were asked to make evaluations regarding technical and professional aspects of the project. No attempt was made, however, to compare the learning of students through television with their learning through conventional methods of instruction. Reactions generally were favorable although a number of deficiencies were indicated.

All were agreed that a campus laboratory school can make a significant contribution to teacher education through closed circuit television. Positive general reactions may be summarized as follows:

1. Demonstrations were highly successful in illustrating methods which had been described in lectures.
2. Pupil responses were clearly audible when work was conducted in small groups. (Observers in classrooms often say they cannot hear small children from the back of the room.)

3. Time was saved by bringing the demonstration to the college classroom instead of taking the college class to a room in an elementary school.

4. In many cases, facial reactions of pupils were more visible on the television screen than they would have been from the back of a classroom.

5. Large numbers of students (60 in one case) were able to witness the same demonstration, providing a common experience for purposes of lecture and discussion.

6. Specific lessons can be demonstrated satisfactorily through closed circuit television.

There were a number of unfavorable reactions, most of which can be remedied through additional equipment and personnel. Items for improvement included the following:

1. Improvement in the coordination of camera work with teacher or pupil activity at appropriate times was recommended.

2. The lack of a zoomar lens prevented adequate visibility of charts, pictures, and other small items which were vital to the lesson (this was rectified in the final lessons in science through the addition of the TV-eye camera).

3. A need to improve the pacing of some lessons was indicated and a recommendation for more exact preparation of lessons (virtually scripts) was made.

4. The audio system was unsatisfactory when work was carried on with large groups in various parts of the classroom.

## Conclusions

A campus laboratory school can play a significant role in teacher education through closed circuit television and close cooperation between demonstration school teachers and professors of education for whom lessons are prepared is imperative. Lessons will be most successful in those cases where the professor explicitly contributes ideas and specifies clearly what he wants his students to see.

The full potential of closed circuit television cannot be realized until all necessary equipment and trained personnel are available.

Many types of lessons which are restricted to a particular classroom area can be demonstrated well over closed circuit television. Similarly, lessons involving extensive movement about the classroom present certain technical problems which are difficult to overcome in any room which is not a fully-equipped studio.

## Recommendations for Future Study

Appropriate demonstration teacher load was not determined by this investigation. Additional study of personnel requirements, needed in-service education, and time involved in the preparation of lessons is indicated.

A continuing problem will be that of educating members of the instructional faculty to the potential use of closed circuit television. Thus it will be necessary to devise ways of stimulating interest in and support for this medium.

Mrs. Aileen Birch, second grade supervisor, teaches column addition using a magnetic board and discs. Visible equipment includes the monitor, a viewfinder industrial camera and a TV-eye industrial camera.

Mrs. Birch works with a reading group in the second grade.

ST. LOUIS PARK PUBLIC SCHOOLS  
Audio-Visual Department

ST. LOUIS PARK  
Minneapolis 26, Minnesota

December, 1959

Audio-Visual Instruction in St. Louis Park Schools

Dear Parent:

You have perhaps heard it said that "Seeing is believing", or you may have heard that "One picture is worth a thousand words". There is a lot of truth in these sayings. The use of Audio-Visual (illustrative) materials in teaching demonstrates the soundness of these sayings.

The principal objective of our program is to help students learn more effectively at all levels in our schools.

It is a widely recognized fact that the St. Louis Park schools have one of the very best audiovisual programs in the state.

by Donald Schutte

# An AV Try for Better Public Relations

The following is the content of an 'audiovisual newsletter' sent recently to all parents of junior and senior high school students in St. Louis Park, Minnesota (a suburb of Minneapolis). A similar newsletter is to be sent also to parents of elementary students.

For more evidence of really progressive thinking, we quote Mr. Schutte, who is AV director for St. Louis Park public schools:

"This is but one phase of public relations for audiovisual. We have film and slides on our AV programs and are showing them to PTA groups, school boards, etc. We also put forth more or less of a continual effort for articles and pictures in the local papers."

Dear Parent:

You have perhaps heard it said that "seeing is believing," or you may have heard that "one picture is worth a thousand words." There is a lot of truth in these sayings. The use of audiovisual (illustrative) materials in teaching dem-

onstrates the soundness of these sayings.

The principal objective of our program is to help students learn more effectively at all levels in our schools.

It is a widely recognized fact that the St. Louis Park schools have one of the very best audiovisual programs in the state.

What are audiovisual instructional materials? Audiovisual devices are efficient tools by means of which ideas are communicated to the students. Typical audiovisual materials are: educational motion pictures, slides, filmstrips, phonograph records, tape recordings, educational television, bulletin board pictures, displays, models, and other illustrative materials.

Why do we use audiovisual materials? Learning results from experience. Audiovisual materials make it possible for pupils to experience many things they could not otherwise have contact with. These materials provide a common experience background, thus making possible intelligent group discussion of problems. Audiovisual materials make objects and ideas more realistic by illustrating them, thus providing a

concrete image for the learner to incorporate in his experience background. Research studies prove that audiovisual materials, when properly used result in 20 to 40 percent more learning in less time. They also promote up to 40 percent better retention of the things learned over a longer time.

Audiovisual materials make learning interesting. An interested student learns faster. There is a more complete focusing of attention on the subject under consideration. The clarity of the multisensory perception inherent in the audiovisual method helps students learn readily, as verbal symbols become more meaningful when illustrated.

Audiovisual materials can conquer time and space. They can bring the world into the classroom, making it possible for pupils to experience indirectly numerous things, places and events which it would be impossible for them to experience in any other way. Slow motion, animation, high speed action, microphotography and other special techniques used in films make possible many observations beyond the range of normal human experiences and help to clarify many a perplexing problem.

In the 1959-60 school year 650 educational motion pictures will be used in the classrooms of St. Louis Park High School. A total of 878 educational motion picture films will be used in the Central and Westwood junior highs. Educational films are used to some extent in the teaching of almost every subject in our schools. These films are particularly valuable in teaching the sciences, English and social studies. All of these materials are made available at a cost of less than 85c per pupil for the year. By means of such films, learning opportunities which could not be obtained by other methods are made available to the students.

Tape recordings and phonograph records are used extensively and very effectively in the teaching of many subjects including music,

speech, foreign language, science, English and social studies. Tape recordings from the State Department of Education tape library and other sources, as well as locally produced tapes, are used.

Materials collected from various sources including newspapers, magazines, textbooks, and student-made materials are projected for class use by means of the opaque projector. Materials of this kind are used in Health and Physical Education, in art, in social studies and in other subjects.

We have 35 mm filmstrips which contain a series of illustrations and systematically organized around a given topic and are used in teaching a number of subjects. They are particularly valuable in teaching junior high science. One advantage of filmstrips is that discussion and questions can accompany the showings of these materials.

In addition to providing commercially prepared audiovisual materials, the audiovisual department also prepares instructional materials such as still pictures, motion picture films and recordings for use in our schools. The audiovisual department has charge of student camera clubs in each of our schools. Photographs for school publications and for classroom use, annual reports, etc. are taken and processed by the audiovisual department.

Most all classrooms in our schools are equipped with darkening drapes and wall screens to facilitate the projection of visual materials. An adequate supply of projectors, recorders and related equipment is available in the audiovisual center in each building.

Audiovisual devices bring the world to the classroom. These methods promote more efficiency in learning. This is a very important function in today's educational process.

D. F. Schutte  
Audiovisual Director

Mr. Schutte is telling the parents about up-to-date techniques like this.

# In the Church Field

by William S. Hockman

## Seeing Motivates Use

Visual aids are like a lot of other things—you are not likely to use what you don't know about. And right here I would like to add: You aren't very likely to use what you know about until you see it!

It is right here that many churches are finding their bottleneck in the utilization of visual aids: getting leaders and teachers to see the stuff.

This I know for a certainty—You can't over estimate the value of a table-type filmstrip previewer when it comes to motivating this seeing and previewing which is so basic to use. (See front cover.—Ed.) It by-passes the bother of using a projector; it saves time; it is just plain convenient. That's why this departmental leader is here. The church has made it easy for her to see the materials it has bought and told her about. So, if you would stimulate use, make previewing easy with a table-model filmstrip previewer.

## Flat Teaching Pictures

It would take the next eight pages to picture and tell the story of how the Central Lutheran Church (4th Ave. S, at Grant, Minneapolis 4) developed one of the finest libraries of teaching pictures in the country. Containing more than 600 mounted and catalogued pictures, this great resource has been in use more than 18 months and everyone is enthusiastic about it.

It all started when the right people got interested: those who appreciated the power of flat teaching pictures to enrich classroom teaching and departmental worship, plus those who had the know-how involved in uniform mounting and cataloguing. Money was needed, not a great deal, but it was forthcoming.

This visual resource is related to the other visual aids used in the church school: flannel graphs, filmstrips, objects, etc. A chairman is in charge and is responsible for all phases of the work, including keeping the church

school staff informed on what relates specifically to current curriculum. Useful guidance on the selection and utilization of this type of teaching aid has been developed. This is the most thoroughgoing approach I have heard about and some way should be found to make their experience and practices widely known. Perhaps a descriptive pamphlet would sell at a price to recover the cost. I am certain many churches would like guidance in building up a similar resource.

## Getting Our Money's Worth

Our assistant minister is staff advisor to the Sunday evening Youth Fellowship of older teenagers; I am program advisor for the Men's Club which meets monthly for dinner. When it was suggested, the men thought the idea of having a panel of teenagers discuss youth-parent relationships before one of their meetings a mighty good idea. How to get the panel? I took the idea up with the assistant minister and he said it would be easy to get a panel of youth for the men if I could get a panel of men to come before the Fellowship to discuss the same question: Teenage-parent relationships.

Now our problem was getting the show on the road; how to get momentum and direction in these discussions of this question before the men and the youth. Here is where the film comes in, and where knowledge of what is available pays off: I suggested that we use the kinescope, *The Tyranny of the Teenager*, (from the Broadcasting and Film Commission, of NCC, 475 Riverside Dr., N. Y. 27) to spark our discussions. That sounded like a good idea to my fellow staff member so the film was booked.

When it came, two days early, it was previewed by the panel of youth which was to appear before the men, and the assistant minister did a fine job of preparing them in terms of what the film had to say on the subject. Before the men (100 present) they did a swell job, making state-

ments and then receiving the tough questions of the men. When adjournment time arrived, the discussion was going full tilt.

Now, once into the fray and with lots more to say, we had no trouble at all getting a panel of men to volunteer to go before the fellowship meeting of the young people the following Sunday night. The film was kept over, and a second rental paid.

Now the young people were on their own ground, and the panel of Wednesday night formed a cadre of seasoned veterans who really popped the questions to the men when the film had been shown to the young people (some 65 attending). After the film each one of the six men on the panel made a short statement on some aspect of the film that caught his attention, and then the general forum began. The assistant minister did a skillful job of moderating the meeting and a 'fine time was had by all.'

Thus we wrung the juice out of that film and got our money's worth. We got a lot more! The men got a view of the youth that they needed; and the youth got some of their battering-rams of unseasoned opinion badly bent on the wall of adult experience. The free-style mental wrestling revealed the agility of youth and the solid weight of adulthood—and both age groups came out of the arena with some opinions pretty badly battered but with their principles pretty well intact. Oh yes, here and there you could see a bright tail-feather of adult conceit lying around the premises, and here and there some adolescent presuppositions littered the landscape.

And, last but not least, an 'old' minister had his faith in films renewed, and a 'new' one got a glimpse of their utility and power when properly hitched to the job.

## Filmstrip Notes

*Next Steps In Religion*, a color filmstrip with script, record, and user's guide which was produced by the Department of Christian Family Life of the General Board of Education of the Methodist Church (201 Eighth Street, Nashville 3, Tenn.) as a sequel to another filmstrip *First Steps in Religion*.

Just as the first was to be used with pre-school parents, this latest one is for the parents of children of the primary bracket—first, second and third grades. The accent falls on two facets of the complex problem: it helps the parent of small children better understand what they can do in the home about the teaching of religion, and it explains to them the broad role of the church school in the life of the child.

's a good job all the way and worth the purchase price of \$10.00.

Bread! Men will fight for bread! They will also cooperate to secure sustaining bread for themselves and their families. For the color filmstrip, *This Sustaining Bread*, Joseph Escourido did 61 frames of original art in delightful color. It illustrates the inspired prose-poetry commentary of Darius L. Wann. Back of both is specially selected background music. When appreciated for what it is—a devotional filmstrip with audience participation—carefully rehearsed, and skillfully presented, it will measure up to a reverent and uplifting meditation on what bread does mean, and can come to mean, in the lives of men. Complete with record (which is recommended), \$12.00 from your A-V dealer or Friendship Press, 475 Riverside Drive, N. Y. 27. Price with script only, \$6.00.

*Holy Week In Jerusalem* (45 frames; color photography) depicts what a visitor to the Holy Land might expect to see in and around Jerusalem during the week preceding Easter. It traces the path which Jesus and his disciples probably trod, beginning on Palm Sunday and including Bethany and Nethage, Church of Pater Noster, the Vale of Kidron, Gethsemane, Church of All Nations, etc., and then stopping at the traditional Stations of the Cross.

**CHRISTIAN EDUCATION PRESS**  
1505 Race St. Philadelphia 2, Pa.

The age level is Fifth Grade and up, and on the basis of general quality and utility it is recommended. Complete with LP record, \$9.00; with script-guide only, \$6.00. Produced by and available from SVE, 1345 Diversey Parkway, Chicago 14, Ill.

I would like to recommend two 'Easter' filmstrips which deal with the seasonal aspects of the subject and not the religious—except in a nicely oblique manner. They are: *Mrs. Hen's Easter Surprise* and *Mary's Easter Lambs*. Both are by SVE and are beamed at the Kindergarten-Primary

age bracket. Both are good, but I enjoyed *Mrs. Hen* more. (At last she finds a place to lay her eggs and hatch a family—but, one egg is bigger than the others, and takes longer to hatch. Yes, you guessed it. Mrs. Duck laid an egg in Hen's nest! Well, he was so cute—big feet, broad bill, wiggly tail, and funny voice. What a happy and interesting family, as they cross the lawn!) Yes, the lambs are born at Easter, and this gives Mary and her brother great pleasure and something wonderful to share—and, we hope they did not wear those little critters out the first

The aged Peter in prison with other Christians, awaiting unknown tortures and possible death, comforts and reassures a young man by telling him the story of his own faith. We see the proud, boastful Peter turn into a coward and a traitor the night he betrays his beloved Lord. And then miraculously the fearful, trembling man becomes Peter, the rock, as the power of the Holy Spirit comes upon him, and the true meaning of the resurrection becomes a living reality in his life.

Hope and encouragement to all people everywhere today is offered in this dynamic spiritual film, as Peter emphasizes—"The power of His resurrection was not just for the day in which He rose from the dead — it is for today — for you and me. He is alive!"

For the spiritual impact of the year in your church, ask your film library for "THE POWER OF THE RESURRECTION," or write

*Family Films*

 Hollywood 38, California

**60 MINUTE SOUND MOTION PICTURE**  
 Daily rental — \$37.50 color, \$25.00 black & white

couple of days. In both the art is good, and stories nicely told. Both, with back-to-back narration on one record \$13.50; both with commentary-guide, \$10.80; each complete \$9.00; each with guide-script only, \$6.00.

In its "Great Stories from the New Testament" Encyclopedia Britannica Films Inc., (Wilmette, Ill.) has produced eight titles, each with 32 frames of art and a reading script:

*The Story of The Nativity* combines the Lucan and Matthew accounts as it might have been seen and understood by one of the Wisemen.

*Jesus Prepares for His Ministry* covers this period in Jesus' life, brings John the Baptist into the scene, tells of Jesus' temptations, his calling of the disciples as it might have been experienced by Simon Peter.

*The Teaching Ministry of Jesus* attempts to convey the central teachings of the Master, including the two parables: Good Samaritan and Prodigal Son; and, shows Jesus' love of children.

*The Healing Ministry of Jesus* shows incidents of healing, the gathering of the crowds around him, the increased concern of the Pharisees and priests.

*The Triumphal Entry and Last Supper* records the usual incidents of this period.

*The Trial of Jesus* by the various authorities seeks to give an understanding of why they were held and why he was sentenced, as observed by Peter.

*The Story of the Crucifixion* relates the death as seen by a Roman soldier, and recalls the 'seven last words' of Jesus. What is the general level of quality? It is good both in the art and the commentary. The basic pictorial material is the Fibocolor from Holland. While stylized, it has both beauty and vitality. The commentaries are scholarly, informative, and written with the aid of a consecrated imagination and need to be thus accepted. While the basic work was done with great competence by Weldon Johnson, Walter J. Harrelson, dean of the Divinity School of the University of Chicago, acted as a collaborator.

What is their utility? Good, as I see it. The producer says the age of widest use is 9 through 14; I would widen it to Junior through Adults. This is the Scripture pictured and explained, and who's too young or old for that? In fact, the last seven titles would provide a fine core for any minister's Lenten series. The ESV version is frequently and effectively quoted. I can see these used in connection with the regular curriculum in the Junior and Junior Hi departments.

The first title makes an excellent addition to any local church's library of Christmas materials. Each with manual and script is \$6.00; the series of eight boxed, \$48.00. These I recommend; the O.T. Titles are undervalued.

On Africa there are four new filmstrips of good quality and utility, produced by the United Church of Canada (Dickie Sada, photographer) and distributed by SVE—*Angola Awaken* 97 frames and for Junior Hi and above; and, *Gifts of Healing*, same age level and accenting medical work more. *A School Bell Rings In Angola*, 77 frames, for Primary and Juniors, and telling the story of a boy who wanted an education ever so badly; and *Firefighters of Angola*, Junior Hi and above, 72 frames, and telling the story of the teenage girls' movement whose members pledge "to take care of her body, to search for truth, to grow in the knowledge of God, and to serve others." Each without LP recorded commentary, \$6.00; each with recorded commentary, \$9.00; and the narrations are paired on the two records thus: first and second title; third and fourth titles. Highly recommended.

Family Filmstrips has produced five titles on Palestine which almost every church will find good and useful. The photography is fine (there could have been a few more close-ups, I believe) and the commentaries are interestingly cast and very informative, tying in at all times biblical background in terms of places, events and people. Available from your A-V dealer.

*Easter In Jerusalem*, 40 frames and for youth and adults, shows just what a Protestant would be looking for if he were to visit Jerusalem and vicinity during Holy Week and on Easter. An excellent unit to close a Lenten series with.

*At Home and At Work in Bible Lands* is for Primary children and runs 28 frames and shows daily chores in the home and work. *Shepherds In Bible Lands*, 31 frames and for Primary grades, shows the work of the shepherd and will help any child better understand biblical allusions to this vocation.

*Everyday Life In Palestine* (53 frames) and *Shepherd Life In Palestine* (50 frames) puts the content you would expect under these titles on the level of Juniors and up. This is good, and many local churches will welcome this closely grading of materials. Prices: First two, complete with 7½ inch LP records, \$11.00; the third, complete with 10 inch LP disc, \$10.00 last two complete with 12 inch LP disc, \$16.50.

# AUDIO

by Max U. Bildersee

"We couldn't have an adequate guidance program here at Frontier High School," said Mr. Knotfrom indignantly, "if it weren't for all the things we do with a tape recorder!" He continued without waiting for the obvious question, or for an examination of wonderment. "To begin with, quite a few of our boys and girls go on to college. We can't have college representative here all the time, but we can have this." He turned the switch.

"Here at State," the voice said, "young people find many exciting opportunities to explore the world of knowledge. In the undergraduate program we offer fine liberal arts training with ample opportunity to specialize in appropriate areas of the arts. Our science laboratories are recognized as the best available in this area, and our science faculty boasts many outstanding scholars."

"Of course," the voice continued, "there is far more to college training than application to study. Studies come first, but through our intra-mural athletics program every student has an opportunity to participate in team sports—to make the team as it were. And we are proud of the record State's teams have made in inter-collegiate competition."

Mr. Knotfrom turned the recorder off. "This recording is not just another voice. It is the Director of Admissions at State who talked to our seniors a year ago—and who has stayed with us this way and talked to a great many students."

"But aren't you giving exceptional prominence to just one institution?"

Mr. Knotfrom smiled and pointed to the shelf of tape recordings, and explained that not only nearby but distant colleges were represented in the school's collection of recordings. He explained that in some instances this was the sole representation of the collegiate institution—beyond the printed catalogue—to be found at any time at the school. "We are just too small and so far away," he explained, "and when the colleges couldn't come to us easily, we had to find a way for them to make the journey easily. And

we find that, as a result of these tape recordings, our boys and girls know more about the variety of colleges they may attend, and more about what is offered in each. They've made some fine selections on the basis of this information."

Mr. Knotfrom added that, because the colleges were so readily represented in the listening room, the colleges too were becoming more interested in attracting students from Frontier High. "It helps us place the capable student with a financial problem because we have better college contacts," he said.

"Don't you find your college counselling a small portion of your Guidance program? What percentage of your graduating class will go to college in June?"

"That, I don't know. But last June we placed more than sixty students out of a class of one hundred. The year before the number was fifty—and before that—before we began to seek tape recorded information—we never placed more than thirty-five per cent!"

"What happens to the others? How does your tape recorded Guidance program help them?"

"Well, the Guidance program here is many things. This is not a large school from most standards—it is a small school measured by city standards. We get to know each student particularly well, and during the

course of the student's stay here we are able to develop a considerable audio library to help the youngsters."

"For instance, we begin to record personal interviews during the very first year. We maintain a continuing file of such recordings for each student—usually made at six month intervals. There are exceptions, of course, because some students need more—or less—help than others. Then, being a small school, we find this recording with a few notes an economic method of keeping information on file. We have no trouble reviewing an interview—verbatim!"

"When parents visit with us we may play back a selected portion of a recording to stress a particular point. Or when the student seeks summer employment we can demonstrate via the recording the student's natural reaction to questions and his relations with people."

"Do you use the recorder for vocational counselling?"

"Oh, my, yes! We do this in several ways."

"First, of course, we have the continuing series of in-school interviews. Then, we do not hesitate to take the recorder to the bank, a farm, a store, a factory or some other possible point of employment. We interview—or the students do—professional and non-professional people and keep a file of work-area interview studies for individual and group listening. These usually provoke considerable discussion in class!"

"Can you be more precise?"

"Well, you are a teacher. You like the profession, or you would not have chosen it, and you would not stay with it. There are many satisfactions for you in teaching. You can tell a student about those satisfactions with difficulty. And you can, as well, speak of the frustrations and heartaches of

**— A WORLD OF SOUND ON FILE —**

teaching. We have a recording we made a few days ago. One of our teachers is leaving at the end of the year and she wanted to tell just why. Listen to this!"

A moment later we heard a rather pleasant, calm voice saying, ". . . and I found much pleasure in teaching. But, like so many other men I must look to a greater financial future than teaching offers. I have a family and I want my children to have the educational opportunities I have had. I cannot do this, and stay in teaching, so I am resigning at the end of the school year to accept a position as a salesman. I'll be back occasionally because I'll be working in this territory — but I am assured of a better income by my new employers. And I won't be entirely leaving education, either, because I shall be meeting many teachers, and many students, I hope, selling essential school supplies."

"There," said Mr. Knotfrom, "goes a fine teacher. We cannot equal the income he will be getting as a salesman. Too bad."

"But of course you go further than teaching?"

"Yes, we do. I mentioned the variety of places we take a recorder. We send for tapes, too. We have asked newspaperman to tell students about journalism — in response to particular questions. You see on the shelf there such titles as 'Accountant,' 'Commercial Artist,' 'Farmer,' 'Banker,' 'Police-man,' 'State Trooper,' 'Salesman,' 'Bus Driver,' 'Truck Driver' and a variety of others. Some of those voices represent former students at Frontier High who understand both the student problem here and the vocational problem outside. They've lived through it, and they are back on the shelf at least, to tell us what they have

heard and learned. Not only have we this variety of practical, first-hand information but we seek new information all the time. When a student exhibits an interest not represented on our shelves, we set about to get the information we need to help the student. And we have found both management and labor organizations very eager to work with us. For instance, the oil industry is constantly looking for new young men to work in service stations and garages, to train for management and supervision and eventually to become entrepreneurs on their own. We have a variety of information and recordings supplied by them. And, too, the appropriate unions have helped by similarly answering questions and supplying data about employment possibilities and about union activities.

"I should add," said Mr. Knotfrom chuckling, "that an insincere man cannot make anything but an insincere sounding recording. And this insight into human character so evident in sound helps our young people make choices."

"Let me recap so that I understand perfectly, Mr. Knotfrom. You begin this recording program when the student enters the school. You record selected teacher-student interviews, particularly those involving student plans and programs."

"That's right. And as the student goes through Frontier we review those recordings with the student or alone as need and experience indicate."

"Do other students hear any of these recordings?"

"Please do not consider me foolish, but we keep those particular tapes under most careful supervision. These are personal and confidential — and are always under surveillance. We try to treat them as carefully as a bank

treats money — lock-up except in use, and every tape accounted through 'sign-out and sign-in' procedures. The student knows the recordings are being made. We do not believe in secrecy in this regard and the student knows, too, how fully the tapes are cared for. After graduation they are cleaned for use."

"The students must have complete confidence in the program you have developed."

"They have. We have tried to do it and we are very careful never to violate it."

"Other than the regular recordings of interviews we offer the advisory services, you know."

"Yes, I wanted to get into this. The student leaving here seems to have had the best variety of information you could give him. The college-bound student . . ."

"Let's not limit that to 'college-bound' as you were saying. All students leaving here are encouraged to take further study as ability, interest and finances allow. And of course we have developed a variety of audio information about many programs including our local adult education program as well as business school, junior college study opportunities to be found in the neighborhood."

"I see. Then your audio information covers advanced study — study beyond Frontier — generally. It also covers, you said, vocational areas."

"Quite so. The vocational opportunities, incidentally, are not necessarily those of immediate use. As indicated, they cover the variety from immediate employment opportunities to the requirements of professional areas of gainful employment."

"Are there any commercially produced recordings that you can use in this area?"

"Regretfully, there are not. That could be a real challenge, I should think, to a commercial producer who would be satisfied with a small return on his investment. Not that I mean that commercial record producers are selfish — far from it. Rather I mean that I recognize the risks involved. We have had many failures in our efforts to secure good recordings for our purposes. But we cannot just re-record after a few tests here in school. Once a commercial recording is pressed and on the market I am afraid that the producer cannot back track and start again."

"You mean that the first effort are likely to be unsuccessful, and that repeated recording expeditions are necessary?"

"That has been our experience, and that is the most part."

"If there were disks, would they  
ply to your school?"

"Most perfectly, probably not. But  
ey could be general enough to  
ply to any school, it seems to me."

"And yet you would expect them  
offer specific information about a  
ven work area?"

"Yes. And I don't think that un-  
sonable. Much of this information  
aches students through a variety of  
ources including magazine articles,  
ooks, manuals of various sorts and,  
course, incidental interview and  
servation as they experience deci-  
on making and meeting many peo-  
e."

"Has the Army — or Selective Serv-  
e — entered into this area?"

"I'm glad you asked that. Some  
their manuals, as you know, are  
erior. And I think that they could  
to the forefront in this area of  
guidance. After all, they meet all of  
ur boys and they can do much to  
plain the variety of options avail-  
ble to young men today in this area  
national service. Yes, I'd like them  
experiment with this guidance re-  
ording."

"On tapes . . . supplying pre-re-  
orded tapes to schools?"

"No, on flat disks. These the stu-  
ents can take home and review at  
isure, or review with their parents.  
he few such tapes we have were  
ade by former students returning to  
e old friends and to renew acquaint-  
ance with teachers. And these are  
ally inadequate because, as you  
now, the regulations involving serv-  
e are changed from time to time  
nd we just aren't up to date.

"Let me ask you a question for a  
hange. Isn't there some branch of  
ach of the services which could un-  
dertake this sort of program without  
aking it a selling program? I mean,  
ouldn't there be a measure of straight  
alk and explanation without what  
me of my youngsters call 'the com-  
ercial voice'?"

"Sounds like a reasonable idea to  
e. And I suspect that if the selective  
ervice people or the armed forces  
eople become convinced they will  
o a good job. You know, this idea  
might just challenge them, and I'd  
are like to see them try."

### T.V. Tape Recording

## ANNOUNCING A NEW "SCOTCH" BRAND MAGNETIC TAPE WITH EXCLUSIVE TENZAR BACKING

designed for heavy duty use,  
high quality performance

**N**OW YOU NEED WORRY NO LONGER  
about fraying, breaking, varying  
tension and other problems that go with  
heavy tape use. "SCOTCH" BRAND Mag-  
netic Tape No. 311 is *extra tough*—de-  
signed for really heavy service in record-  
ing and playback applications requiring  
frequent repeat, continuous play and  
constant handling.

*It's tear-resistant*—withstands severe usage  
and handling, won't pop or tear if edges  
become nicked or scratched.

*It's stretch-resistant*—fast starts, stops or  
varying drive tension won't distort or curl  
the rugged backing.

*It's non-drying*—won't become brittle in  
hot, dry storage. Will not absorb mois-  
ture, perfect for all weather use and long  
time storage.

Add to this, exclusive Silicone Lubrica-  
tion, impregnated throughout the entire  
coating, to assure the most effective, last-  
ing protection available for your recorder  
heads. Plus the finest of uniform, high

potency oxides for the perfect sound  
reproduction quality that has made  
"SCOTCH" BRAND famous.

Packed with every reel of No. 311 is a  
unique new end-of-reel Tape Clip that  
holds tape securely, prevents spilling or  
tangling in handling, storage and ship-  
ment. *Colored reels are available, too,*  
in four transparent colors: Red, Blue, Green,  
Yellow.

The price? "SCOTCH" BRAND No. 311,  
with its professional quality and exclusive  
new TENZAR backing, is priced in the  
*same range as standard acetate-backed tapes!*

And, remember—TENZAR backing is an  
exclusive development of the 3M Com-  
pany, whose research pioneered in audible  
range tapes, as well as video and instru-  
mentation tapes.

See or call your supplier now for "SCOTCH"  
BRAND Magnetic Tape No. 311 with new  
TENZAR backing. Standard play, 600  
and 1200 foot reels.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## The Weapons Revolution

(National Educational Television Film Service, Audio-Visual Center, Indiana University, Bloomington, Indiana)  
Produced by The Social Science Foundation and Communications Center, University of Denver, for Education Television and Radio Center, Ann Arbor, Michigan. 29 minutes, 16mm, sound, black and white, no date. \$125.

### Description

*The Weapons Revolution*, a kinescope with commentary by Foundation Director Dale Fuller and visuals from motion picture files of official and news agencies, scans the development of weapons from the rock to the ICBM, discusses its effect on personal safety and military strategy today, and presents problems of policy currently facing our nation.

The program opens with rapidly-succeeding shots of electronic detection and triggering devices, a development which had its origin with the Army's acceptance in 1909 of the Wright brothers' invention, was given impetus by the mechanization of World War I, and continued in 1919 with flying torpedoes, fore-runners of today's guided missiles. When experiments during the 1930's finally produced the B-17, air power came of age. Now total war was possible—the kind of war described by Billy Mitchell who said that crippling blows must be carried into the enemy's country against his whole population and his whole means of subsistence. Now air power had become a revolutionary supplement to ground and naval power.

But, the closing days of World War II brought two more weapon revolutions—the V-2 rockets, used against Britain, and the even more awesome power of nuclear fission. The latter's effect is demonstrated by pictures of Pacific Ocean tests where an island three miles in diameter became a 175-foot crater and where fallout effects ranged over 7000 square miles. Once warriors wore armour; now they wear oxygen masks. Once battlefields were measured by acres; now, thanks to inter-continental bomb-

ers, atomic powered submarines, and weapons like the Snark and Regulus, battlefields are measured by cities and even by continents. The ICBM, moving at 12,000 miles-per-hour toward a target 2000 miles distant, is pictured as the most terrifying culmination of jet propulsion. And just as these weapons went through long, discouraging periods of trial and error, so must men. Weightlessness is but one of the problems with which astronauts must learn to cope in the laboratory.

But concern with technical, physiological, and psychological problems on the firing range and in the laboratory must not overshadow in our minds the even longer-range problems of national policy. To the "total war" concept of 1917 and 1942 must be added a new dimension—penetration along great circle routes to total populations in places heretofore inaccessible. How can masses of people anywhere and everywhere be protected in this day of long-range missiles and nuclear warheads? Certainly, in case of attack, there will be no time for democracies to mobilize their civilians and their industry. There may not be time for even our President and the Pentagon to make any but immediate decisions. Indeed, even with the best of preparations for all kinds of emergencies, there may be no real defense possible against surprise attacks. Therefore, renewed efforts to reduce and control armaments are essential. But these become possible only as world tensions are reduced. Meanwhile, we must maintain a missile program strong enough for retaliation and at the time continue our conventional weapons program in the event of small wars. Such conflicts become increasingly significant as nations recognize that use of missiles and nuclear weapons would only trigger a worldwide conflagration. Thus we are forced into a double program of preparedness.

### Appraisal

This kinescope, one of a series on "Twentieth Century Revolutions in World Affairs," is by its very nature subject to "dating." But it is generally-

enough conceived to be useful in social studies classes in the second grades and in adult discussion groups for some time to come. The visuals selected from motion picture files of AEC, NATO, Defense Department, NBC, National Archives, and Army, Navy, and Air Forces are not always sharp; but they are well selected and edited and support the narration effectively. Organization is excellent and pacing is well-handled despite two rather lengthy recapitulations given by Mr. Fuller from behind a lectern. Much of his commentary is dramatic and is highlighted by numerous "then and now" contrasts. Certainly viewers will be ready at the film's close to join him in declaring that peace cannot be purchased at exorbitant prices.

—Kenneth B. Thurston

## The World of Molecules

(Churchill-Wexler Film Production, 801 North Seward Street, Los Angeles 38, California) 11 minutes, 16mm, sound, color or black and white, 1958. \$100 or \$50. Correlated with the text series, *HEATH ELEMENTARY SCIENCE*, by Herman and Nina Schneider.

### Description

Through creative animation and live demonstrations *The World of Molecules*, one of eleven films designed to supplement Heath's Elementary Science Series, describes the rudiments of molecular behavior. Specific attention is paid to the properties of molecular dispersion and attraction. The relationship of heat energy to change of state is depicted through use of a variety of examples.

The film opens with a riddle, "How are a ball, a bell, a book, a brook, a boy, and a bike alike?" The narrator then states that science believes that all things are made of molecules, and these molecules are very small. Following scenes show that a grain of sand on a baby's nose contains more molecules than there are grains of sand on a large beach.

The concept of the molecular motion in all things is introduced. Two boys set up an experiment to prove

his statement. They put a few drops of ink into a glass of water. At first the ink molecules do not disperse throughout the water. Animation is used to portray how the molecules of water and ink bump together and scatter the ink molecules. The boys are now seen observing their glass of ink and water in which the ink molecules have become evenly dispersed throughout the liquid.

The relationship between molecular behavior and the sense of smell is presented next. The two boys prepare "between-meals-snack" of doughnuts, and animation is used to show that many of the doughnut molecules escape and move through the air, giving the boys the sensation of smelling the doughnuts.

In the next scene the boys are getting a drink of water. The narrator asks, "Why, since molecules move, do the glasses not melt or lose shape, or why does the water not change to ice?" Animation is again used to show how the behavior of molecules explains why things are either liquid, solid, or gaseous. Molecules of a solid move with a very small area, molecules of a liquid have more motion, and gas molecules are even more active. The scene then shifts to show a frying pan, a bread board, and a doughnut. As the boy breaks off a piece of the doughnut, the narrator points out that the molecules of some substances have a stronger attraction than the molecules of other substances. Because of this the boy could not break the frying pan and probably he could not break the bread board, but the doughnut gives him no trouble at all.

It is pointed out that the molecules of liquids also attract one another. This is demonstrated by a drop of water hanging from a faucet in defiance of the laws of gravity, a large soap bubble being made, and droplets of water standing up in little balls on a piece of waxed paper.

Several scenes in animation review the behavior of molecules in solids and liquids. Molecules of air are shown much farther apart and moving more rapidly to indicate that air molecules have little attraction for each other.

The concept of the change of state is described through animation, stressing the role of temperature change as the causal agent. The boys are observed eating ice cream and drinking milk. Changes in state are shown by the melting of ice cream, the evaporation of milk, and the condensation of water on the outside of the cold milk bottle.

Sand, glass, and metals which are solids at ordinary temperatures are

seen in the liquid state when they have been heated sufficiently. The substances are then pictured in their more familiar forms as a bottle and as a spoon after they have cooled and the molecules ceased to move as violently.

The behavior of molecules during a change of state in a substance is reviewed in animation. In the closing sequence the narrator stresses the changes of state that are constantly taking place all about us.

## Appraisal

*The World of Molecules* provides the upper elementary and junior high student with a very clear explanation of one of the fundamental principles of science. The film very effectively uses animation to make an involved subject quite simple. The teacher will find this film a welcome teaching tool because it shows vividly a concept which often at this grade level is only talked about. The film can also be

used to help students understand why temperature differences cause expansion and contraction in most substances.

The animation departs from the traditional portrayal of molecules as spheres in favor of more abstract shapes which may be preferable since actual molecules are not spherical.

—Don Nicholas

## The Story of the Modern Storage Battery

(United States Bureau of Mines, Graphic Services Section, 4800 Forbes Street, Pittsburgh 13, Pennsylvania) Produced by Willard Storage Battery Co. and U. S. B. M. 25 minutes, sound, color, no date. Free-loan from U. S. B. M.

### Description

*The Story of the Modern Storage Battery* uses live action photography and animation to survey the multitude of uses the storage battery serves in everyday activities; to present a simplified explanation of primary and secondary cells; to trace the steps in

manufacturing the storage battery; and to stress the care required for long battery life.

The film opens with views of the automobile storage battery and relates the battery to such functions as starting the car engine and stand-by power for the lights and radio. Other uses of storage batteries are suggested in guided missiles, ocean buoys, and for emergency use in hospitals.

Having established the importance of storage batteries, the film develops the principles of operation of such batteries. Using common objects such as a penny, a quarter, and a grapefruit, the film demonstrator builds a simple primary cell. Volta's zinc and silver voltaic pile is shown and related to the later zinc-acid primary cell. Noting that such a cell cannot be reactivated once the negative plate is consumed, the film turns to the lead-acid storage cell and develops the principles of the "storage" process. The film presents the chemistry of the charging and discharging processes in simple form. The evolution of lead peroxide-filled grids from a simple lead plate is depicted. The demonstrator emphasizes that only a chemical change occurs in storage batter-

ies; that electricity is *not* stored.

The third section of this film shows manufacturing steps in storage battery production from molding the grids to the final assembly into completed battery.

The final sequence gives a dramatic portrayal of some of the abuses which can reduce the useful life of an automobile storage battery, and the way in which these abuses can be prevented.

### Appraisal

*The Story of the Modern Storage Battery* will be very suitable for use in general science or science survey courses in junior or senior high school but it will probably be less suitable for use in chemistry or physics. The presentation of technical information such as the chemical processes in storage cells is simplified so that no background in chemistry is needed by the viewer. This film may go beyond the immediate goals of some teacher in presenting uses, principles of operation, manufacturing steps, and operational problems all in one film program.

—Merlyn Herrick

## AUDIO-VISUAL INSTRUCTION

By JAMES W. BROWN and RICHARD B. LEWIS, both of San Jose State College; and FRED F. HARCLEROD, Alameda State College

554 Pages, \$7.95

This text on audiovisual methods provides concrete, practical information on the use of instructional materials to plan and carry out learning activities. Examples of use have been drawn from all subject fields, from kindergarten through college. It is the first audiovisual text to use an inventive and stimulating format in which profuse illustrations are correlated with the text. Emphasis throughout is on the principle that learning is most effective when materials are integrated with instruction. A-V Instructional Materials Manual, \$3.50. Teacher's Guide, Free.

# FILMSTRIPS

by Irene F. Cypher

Last week someone asked us the question that always causes us to see slightly reddish specks before our eyes—namely “Don’t you think it is time that filmstrip producers standardized the number of frames to be included in a classroom filmstrip!” To our way of thinking this would be one of the most fatal things that could possibly happen in the name of good instructional materials, and something we hope never to see come to pass! The minute we say there is one format into which any instructional materials should fit we have destroyed the very basic reason for using these same materials—namely as a means of bringing variety and reality to a learning situation. The fact that different producers give us a slightly different approach to a subject is what lends value to their material and provides both teacher and pupils with a means whereby to study subjects from different sides of a question. It is true that instructional materials should help to interpret the traditional curriculum areas, but this does not mean that there is only one road by which to reach this goal. Let’s beware of anyone who tries to stereotype materials to such a degree that they lose identity and interest appeal for that most important of persons—the individual pupil sitting in our class.

*Builders of America* (8 strips, black and white; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$24 per set, \$3 single strips). All too often history fails to interest pupils because they feel no association with people, with men and women who made the history under consideration. In this series the producers take eight leaders who have contributed to the growth of our country and give us some idea of what they were like as people and as leaders. The names included in the series are Boone, Lewis and Clark, Eli Whitney, John C. Fremont, Andrew Carnegie, Susan B. Anthony, Horace Mann and Booker Washington. The details included in the accounts provide an idea of what the individual was like as a person and of what they did to help build America. The strips are fairly long and should be used in sections as each person is studied. They are adapted to work in social

studies and also could be well used for language arts, in the upper grades and in junior and senior high school.

*How the West Was Won* (4 filmstrips, color; produced by Life Filmstrips, 9 Rockefeller Plaza, New York 20, N. Y.; \$6 each, \$5 if four or more ordered). Life for the trailblazers and homesteaders who helped to build the great western states was rugged, but colorful. There is a variety of pictorial detail in this series, for the material is selected from paintings and manuscripts. Pupils will no doubt be interested in the pictures of cowboys and covered wagon pioneers. There is no attempt to provide a single story element, but many elements are included to provide a picture record of people and events. This is resource type material, and will be found use-

ful in helping to make visual many stories in books and pamphlets. The strips can easily be used in conjunction with any text material.

*Instruments of the Symphony Orchestras* (6 strips, color, with 6 12-inch, 33 $\frac{1}{3}$  rpm. records; produced by Jam Handy Organization, 2821 E. Grand Boulevard, Detroit 11, Mich.; \$51 per set, \$8.95 individual filmstrips with record). Those who wish either to be musicians or to be able to understand musical presentations need to know something of musical instruments. In this series very good drawings take us back into the historical development of different instruments of the symphony orchestra and then photographs show us how modern performers play these same instruments. Ample opportunity is given to hear how the various instruments sound when played. Music classes will, of course, find the series of great help. We wish, however, that more of this type material would also be made part of club programs language arts units. The “well educated” person, who as an adult, will be part of the great concert-going public needs to have a knowledge and appreciation of what this filmstrip series provides—a working familiarity with the instruments

## PIXMOBILE PROJECTION TABLE

**KEEPS YOUR EQUIPMENT  
READY FOR USE**

Save time... save storage space. Prepare your visual presentation in advance on the portable Pixmobile, roll it in, show it, store your equipment on it. Sponge rubber top, large enough for both movie and slide projector. Has 4" wheels, equipped with brakes that hold on incline. Vibrationless. Several models and heights. **42" table only \$32.95.**

*an  
astute  
investment  
in lasting  
quality*

Newcomb portable combination transcription player p. a. systems, dozens of models, 12 to 56 wetts, 1 to 4 speakers

# NEWCOMB

The three imperative requirements for audio equipment to be used for instruction and recreation—safety, audience coverage, dependability—are fully met in all Newcomb audio products. Transformers isolate electronic elements from the power mains to positively prevent shock. They also improve performance. Coverage and intelligibility are achieved by high fidelity circuitry and by carefully matching output systems with loudspeakers for optimum efficiency. Newcomb ruggedized construction provides the dependability needed for schedule-keeping operation. Cases are made of crack-proof, warp-proof plywood, glue-blocked for added strength, covered with washable, scratch-resistant fabrikoid, protected by metal corners. Come-apart hinges eliminate the most vulnerable part of cabinet construction. All parts are American-made including the new four-speed phono motors.

When buying for the future, look to the past. Consult your own service records. You will find that Newcomb equipment costs less to own on the basis of amortization...less to maintain on any basis. Equate service life and upkeep against initial cost and you will find that Newcomb is your most astute investment in lasting quality. It will pay you to specify Newcomb every time.

which combine to provide pleasant hours for us in our personal lives.

*Language Filmstrips—French for Elementary Schools, Set No. 1 and Spanish for Elementary Schools, Set No. 1* (each set 6 filmstrips, color, with 3 10-inch 33 $\frac{1}{3}$  rpm. records; produced by Young-America-McGraw-Hill Book Co., 330 West 42 St., New York 36, N. Y.; \$57.50 per set). In each instance this is material for the very beginning study of either French or Spanish, and it is specifically planned for such work in the elementary grades. Art work and pictures are similar and the plan is to familiarize pupils with simple, easy conversation. In each instance the teacher may select a plan to be followed; she may use that part of the filmstrips which has no captions, or she may turn to the section in which the captions are included. Records provide accent and enunciation and there is a possibility for considerable variety in the way in which the material is to be used in the classroom. Words and phrases are simple and the design is intended to elicit complete sentence response from the pupils viewing the strips.

*New Nations in the World Balance* (single strip, black and white; one in a series of monthly filmstrips, produced by The New York Times, 229 West 43 St., New York 36, N. Y.; \$15 for complete series, \$2.50 single strip). Very often it will be found easier to stimulate discussion of world affairs if there is a series of pictures to which to direct attention. New filmstrips have always seemed to be one way of doing this and the present strip centers our attention on people and events in the new nations of Africa and Asia. Maps and diagrams help to outline the points. There is considerable similarity to the patterns followed by the groups here considered and the film-strip helps to indicate what problems must be faced and dealt with before these nations achieve true status as world nations.

*Outlines of Natural Science* (5 filmstrips, color; produced by Long Film-slide Service, 7505 Fairmount Ave., El Cerrito 8, Calif.; \$23.50 per set, \$5.00 single strips). The purpose of these strips is to introduce students to biology, cells, invertebrates, vertebrates and plants. Charts, drawings, diagrams and photographs are combined for this purpose, and the needs of the beginning science student in junior or senior high school have been considered. Explanations are clearly presented and the viewer led along to new concepts and facts. This is material that can be used with any text.

Newcomb classroom radios, AM and FM models, rugged, sensitive, stable, safe.

*The Bill of Rights—Its Meaning To-*

day (5 filmstrips, color; produced by International Film Bureau, 57 E. Jackson Blvd., Chicago 4, Ill.; \$30 per set, \$6 single strip). As the title indicates this strip is designed to outline the importance of the 1st, 4th, 5th, 6th and 8th amendments. Takes us to a mythical country where the citizens have all the rights possessed by Americans except those guaranteed in the listed amendments, and we see what happens under the circumstances. The strips can thus be used as part of a social studies unit or for more detailed presentation and possible dramatization or lengthy discussion in other classes as well. Incidents used are typical of those occurring in many areas of the world today and there is a timeliness to the presentation.

*The Dollar Series* (3 filmstrips, color; produced by Wm. Gottlieb Assoc. for Institute of Life Insurance, 488 Madison Ave., New York 22, N. Y.; available on a free loan basis, and for sale at \$3). High school students are close to the period when they will soon assume responsibility for spend-

ing salaries and family incomes. The dollar series presents some information about what to do with *Dollars for Health*, *Dollars for Security* and *Directing Your Dollars*. A trio of rather typical students face situations which make it necessary for them to make provisions for their dollars, and we see how they learn to apportion their moneys to good account. The strips will be useful in a number of classes and provide some helpful information. They would seem to be best adapted for discussion purposes and to serve as summation of units in consumer education, family living and economics.

## Women On The March

Women on the March gives face and action to names that have long passed into the annals of suffragette history. Rare motion picture footage, dating back to the Victorian era of the bustle and the plumed hat, makes this an unparalleled film document.

**Widen Your World,** catalog of 25 filmstrips on religious and social themes. FRIENDSHIP.

For more information circle No. 240 on return postal card.

# Trade News

## Interchurch Center

The Broadcasting and Film Commission and the Department of Audio-visual and Broadcast Education are now located under one roof with many other Protestant church agencies in the new Interchurch Center at 475 Riverside Drive, New York 27, N. Y. Possible confusion will be avoided if just a little extra care is taken to address mail as specifically as possible. Margaret Carter suggests the addition of "Film Distribution Department" on BFC mail intended for her department. Mail flyers are available, free, on currently emphasized mission areas.

## Vinyl for Light Control

"Tox-Shade" vinyl sheeting for application to window glass to "screen out fatigue-producing glare in work areas and prevent excessive temperature build-up from direct exposure to sunlight" is now available in several transparent, translucent and opaque colors, custom cut to exact window dimensions and, now, in sheet size up to 48"x72". Applied without adhesive by simply squeegeeing to the pane, it reportedly produces a perfect bond lasting as long as desired. It is readily stripable, storable, and remains as washable as the glass itself.

"Tox-Shade" vinyl sheeting

## Audiotape Premium

A good example of "multiplier" sales promotion technique is the Audiotape offer of a hi-fi tape recording, stereo or monaural, 7 1/2 ips, with every purchase of a 1200' roll of tape, for the price of just the two reels of blank tape, plus \$1. Two releases, available only under this premium offer, are "Blood-and-Thunder Classics" and "High Spirits."

## Video Tape House Organ

A binder-punched house organ, "Video Talk," has just been launched by Minnesota Mining. The first issue covers special demagnetizing storage and distortion precautions.

### CLASSIFIED

### Kodak's Annual High School Photo Contest Closes March 31

One of the finest examples ever of good promotion combines public relations, building of future markets, and stimulation of over-the-counter photo sales. All students in grades 9-12 are eligible to submit as many entries as they choose, in monochrome or color. Five categories: School Activities; People, All Ages; Animals and Pets; Pictorials; and Color (open classification). Contest closes March 31. Earlier entries are most welcome. For free entry blanks, rules and helps, write Kodak High School Photo Contest, Rochester 4, N. Y.

### Free Sample—King Size

College math teachers can get a 4-foot demonstration slide rule free by requesting same. An exact replica of the Pickett & Eckel, Inc., 10 in. all-metal slide rule, in eye-saver yellow color, large size, duplicate scale arrangement, easy to read and manipulate. Included in the free gift offer are also three advanced math teaching manuals and a teaching outline. We'll forward your request, provided it is made on your college or university letterhead.

Tiny transistorized pre-amp . . .

### Little But Oh, My!

It's a long cry from the one-time super-heterodynes to the transistorized pre-amplifier that you hold, literally, in the palm of your hand. Built into Executive mikes, tuners and players to boost weak signals and hold down noise.

Another little giant — Sylvania's smallest incandescent ever produced on an assembly line will pass through the eye of a darned needle.

### New NAVA Equipment Directory

The sixth edition of The Audio-Visual Equipment Directory has just been issued by the National Audio-Visual Association, Fairfax, Va. More than 300 new models of all types of equipment will appear in it for the first time, including two entirely new sections on "Language Laboratory Systems" and on "Transparency-Making Equipment." 250 pages, 8½ x 11, plastic-bound, \$4.75 if billed; \$4.25 cash with order.

### Films of the Nations For WPIX

Films of the Nations Distributors, Inc., has taken over 16mm sales and rentals of the historic documentaries of WPIX, New York. Released thus far are **The Russian Revolution, The Secret Life**

. . . and tinier—this "inky."

of Adolph Hitler, and Cold War—Berlin Crisis.

### Lang Lab on TV

The installation of a 32-position Rheem-Califone language laboratory in a California high school was the subject of an on-spot telecast by Station KTLA.

### People in the News

John A. Hawthorne has been appointed manager of industrial distribution for the General Precision Lab line to industrial markets. His background includes experience with GE and RCA on closed-circuit TV equipment.

Dr. J. Michael Hagopian and production assistant Charles Harkey are in Africa producing a series of films on the peoples of Nigeria, Ghana and Liberia. Their "Altantis" productions are Film Festival favorites.

Haskel A. Blair has been elected president of University Loudspeakers, Inc., a subsidiary of Altec Electronics, Inc. Sidney Levy will continue at University as executive vice president and director of engineering.

President Bill Kirtley announces the appointment of the following among NAVA's committee chairmen: educational, Ellsworth Dent; industry, Robert Abrams; religious, Harvey Marks; trade relations, V. C. Doehring.

General Electric has established a new "Audio Products" section, combining the phonograph and audio components operations. Charles J. Coward is general manager of the new section with headquarters at Auburn, N. Y.

W. M. Bastable, for 15 years in charge of Swift & Company's audiovisual services, and past-president of the Industrial AV Association, is the new western manager for Sterling Movies—USA with headquarters in Chicago.

Fran Welsh is the new midwest regional sales manager for Viewlex. Benjamin Friedland has been appointed Acting General Manager of Ozalid. Walter A. Hensel, heretofore Ozalid GM and vice-president of the parent General Aniline and Film Corp. resigned.

President Joseph A. Tanney of the S.O.S. Cinema Supply Corp. announces the appointment of Oliver E. Cain as professional consultant on equipment needs.

## The KEYSTONE Standard Overhead Projector

is available for purchase under the

# National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Standard (3¼" x 4") Lantern Slides, Polaroid Slides, and Handmade Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2¼" Slides, Strip Film, and Microscopic Slides.

It is useful —

In the Science Category with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiography, and Elementary Science.

In the Mathematics Category in teaching Number-Combinations and Fraction-Combinations tachistoscopically; Solid Geometry with Stereograms.

In the Modern Languages Category in teaching French, Spanish, German and Russian with Tachistoscopic Units.

Write for Further information or a Demonstration by our Local Representative. KEYSTONE VIEW CO., Meadville, Pa. Since 1892, Producers of Superior Visual Aids.

## New Kalart/Victor Improves 16mm Programs 3 Ways

This classroom photograph reveals three common audio-visual problems—and how they are best solved by the new Kalart/Victor.

1. *Hard-to-darken room.* Only a projector with the superior light output of the Kalart/Victor could assure adequate screen brightness. Its redesigned shutter alone increases light output 12%. For even more light, a 1200 watt lamp may be used.

2. *Distracting Projector noise.* The new Kalart/Victor is the quietest running 16mm sound projector ever built. Even students closest to the projector are undistracted.

3. *Choice in speaker placement.* While the speaker is next to the screen in this classroom, the film could have been shown without ever removing the speaker from the projector. Only Kalart/Victor offers the new *door-mounted speaker* which can be left closed on the projector, or detached.

Other major Kalart/Victor improvements include truly magnificent sound quality, once-a-year lubrication, and brighter than ever stills. Choose from models with 15-watt or 25-watt amplifier. Ask your authorized Victor Dealer for a demonstration soon.

# Stop the show... *study the still!*

Stop the movie...study and discuss a single frame. Only Bell & Howell's new Filmosound Specialist lets you automatically hold the single frame for as long as you want...the picture stays bright, and there's no danger of damaging the film.

The Specialist lets you reverse film, and go back to discuss a particular scene. It's the most versatile of all sound projectors, and the simplest to run. All critical film handling parts are sapphire jeweled for 400% longer life. Mail the coupon today for your copy of "Teaching and Training with Motion Pictures," and complete information on the new Filmosound Specialist.

## With the Authors

Alan V. Grossberg is fifth grade teacher at Public School 106 in Brooklyn, N. Y. He took Bachelor's and Master's degrees at Brooklyn College, studied for a year at Columbia, and is currently enrolled at New York University where he is matriculating toward a doctorate in educational administration and supervision.

Thomas H. Boardman is assistant professor at the University of Illinois and director of the Visual Aids Service. Previously he was director of the Visual Aids Service for the Freeport, Ill., public schools. He is a past president of the Illinois Audio-Visual Association.

Milton Grassell is with the department of visual instruction, general education division, Oregon State System of Higher Education. He is presently a member of the DAVI legislative committee, has presented a number of demonstrations at DAVI meetings during the past six years. He is a past president of the Oregon Audio-Visual Association.

Joseph F. Hohlfeld teaches at the laboratory school at Iowa State Teachers College, Cedar Falls, Iowa. He has an AB from Hastings College, Hastings, Neb., and Master's from the University of Colorado. He is a Navy veteran of World War II and Korea.

Dr. Gaylen B. Kelley is assistant professor of education at Boston University and coordinator of audiovisual service for the school of education. He has a doctorate from Boston U. (June, 1959). His teaching experience includes high school in Old Town, Maine; University of Maine; Aroostook State Teachers College; and the U.S. Army medical corps.

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**The Vikings**—In full color, 47 frames, based on the Kirk Douglas production. \$7.50. With guide, \$7.80.

**A Lesson in Mythology**—Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50. With guide, \$7.80.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$7.00. With guide, \$7.30.

**Knights of the Round Table**—A set of two filmstrips. Part One, black-and-white, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, full color, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50. With guide, \$7.80.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50.

**Richard III**—Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50. With guide, \$7.80.

**Alexander the Great**—Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50. With guide, \$7.80.

**Adventures of Robinson Crusoe**—In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50. With guide, \$7.80.

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$4.00.

**Hansel and Gretel**—In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kine-mins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50. With guide, \$7.80.

**Greatest Show on Earth**—In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50. With guide, \$7.80.

**Ulysses**—In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50. With guide, \$7.80.

**Shakespeare Series**—Eight black-and-white filmstrips dealing with Shakespeare's life, theatre, and plays. Each of the filmstrips on his plays is made from photographs taken from a photoplay, presenting a complete synopsis of the play, *Introduction to William Shakespeare* (40 frames); *Shakespeare's Theatre* (43 frames); *Hamlet* (62 frames); *Macbeth* (45 frames); *Romeo and Juliet* (62 frames); *A Midsummer Night's Dream* (53 frames); *As You Like It* (50 frames); *Henry V* (42 frames). Set of 8 filmstrips —\$28.00. Each filmstrip—\$4.00.

## On the Screen

### Cover Scene

"No matter what type of photography, there are a thousand different presentations possible. . ." Thus says the sound on this frame of Du-Kane Corporation's new filmstrip on the various techniques of sound filmstrip (sound slidefilm) production.

### "Bright Spot, Dark Spot!"

An item which drew our particular attention in the mail recently was a 48-page illustrated report to the governor and general assembly of the state of Georgia by Claude Purcell, state superintendent of schools. Topped with the above title, this is an attractive, sharply communicative publication, visualized throughout with apt pencil drawings, photos, charts and iconographs.

The booklet points up some good lessons. 'Half a loaf' may be better than none in some instances, but 'half an annual report on the state school system' fails to use all weapons to reach its objective.

The Georgia presentation is an effective report and must be drawing praise from many quarters.

Of special interest to us is the full page devoted to audiovisual materials. To quote in part: "Georgia schools use 8,000 films a week. Last year, 1430 schools used 238,023. Our film library—started Nov. 18, 1947, and now the largest of its kind in the world—has 4,339 films, with 45,047 prints, that are sent to schools from the four film libraries: Atlanta, Collegeboro, Tifton, and Macon. In 1955, tapes were added and we now have 6,000

tapes of drama, poetry, speeches, music, and discussion topics."

### The Passing Parade in Educational Screening

# THE QUALITY OF LEADERSHIP

No. 2 in a series of messages to all concerned with better education

*Continuous availability of complete or partial footage replacement is assured on all Coronet films . . . an exclusive Coronet feature*

As a part of its continuous service program, Coronet maintains a complete master negative file on every film in the Coronet library.

This assures quick replacement or repair of any Coronet film that is seriously damaged or destroyed—thus eliminating the need for disturbing established audio-visual programs. In effect, this policy has enabled Coronet to maintain its responsibility for every Coronet film ever produced.

A professional staff directly controls the production of new prints and replacement footage, efficiently and at minimum cost in Coronet's own modern laboratory—the finest one in the world devoted exclusively to educational films.

Continuous service throughout the life of each print is just one of the many features of Coronet quality—the quality of leadership.

*This booklet is yours! Send for it today!  
It tells the complete story of Coronet creative quality in its library of more than 900 educational films.*

## CORONET FILMS

To illuminate all facets of learning

CORONET BUILDING

CHICAGO 1, ILLINOIS

## Northeast AV Conference Hosts Regional Leaders

More than 100 audiovisual supervisors and instructional materials experts from all of the New England states, New York and New Jersey gathered January 28-30 at Central Connecticut State College in New Britain for the fourth Northeast Regional Audio-Visual Leadership Conference.

Mrs. Villa Quinn, director of elementary education for the state education department in Maine and Dr. Clarence Bergeson, director of Audio-visual Service at the University of Maine (Orono) were elected co-chairmen by acclamation. They succeeded

At New England AV meeting: from left, Joseph Murphy, Connecticut department of education; Villa Quinn, Maine department of education; Clarence Bergeson, University of Maine; Elliot Kone, Yale University.

the 1959 co-chairmen, Joseph F. Murphy of the Connecticut state department of education and Elliot H. Kone, director of the Yale University Audiovisual Center.

The keynote address, delivered by Alfred Villa, director of the Audiovisual Center at Central Connecticut State College, stressed the opportunities in the broad application of selected audiovisual materials. "The audiovisual media can be effectively used to improve instruction and to enrich learning," he said, "but we know that the tool must serve both the instructor and the student and remain subject to the will of both without replacing either."

Resource personnel for the conference included Dr. William J. Flaherty, Connecticut's deputy commissioner of education; Robert Danilowicz, audiovisual director, state education department, Rhode Island; Mrs. Villa Quinn; Dr. George Champlin, chief, bureau of elementary and secondary education, Connecticut state depart-

ment of education; Dr. Anna L. Hyer, executive secretary, Department of Audiovisual Instruction, National Education Association (Washington); Dr. Allan Rosebroch, director of teacher education and certification, New Jersey state department of education, Dr. Irene Cypher of New York University; and Samuel Cohen, administrative assistant, board of education, Hewlett, New York.

Other major addresses were delivered by Dr. Leslie P. Greenhill, associate director, division of academic research and services, The Pennsylvania State University, and Dr. Harry Becker, superintendent of schools, Norwalk, Connecticut.

## Marks Appointed Chairman of NAVA Convention

Harvey W. Marks, Visual Aid Center, Denver, Colorado, has been named general convention chairman of the 1960 National Audio-Visual Convention at the Morrison Hotel, Chicago, August 6-9, according to an announcement by W. G. Kirtley, president of the National Audio-Visual Association.

The National Audio-Visual convention features the largest single exhibit of audio-visual equipment and materials in the world, according to the association. Some 2500 AV people, including several groups of AV users, are expected to attend the event this year.

Marks, who is the present first vice president of NAVA, recently conducted a survey to evaluate the 1959 convention. "Responses from several hundred audiovisual people who attended last year's convention indicated strong backing for the move in which the hours of our exhibit were extended."

## Illinois AV Association Plots Future Meetings

A meeting of the board of directors of the Illinois Audiovisual Association at Peoria, January 8, set the time, place and format of the next four meetings of the association.

The annual spring meeting, April 8-9 in Peoria, will include tours of the audiovisual section of the public library, radio station WMBE, and the audiovisual center at Bradley University.

In the afternoon of April 8, the Bradley student building ballroom will be the site of a dozen demonstration clinics conducted by assigned audio-

visual specialists for several hundred classroom teachers. The county superintendent has issued instructions that not less than two teachers must attend from each of the county's schools. Nearby schools and community program chairmen are being invited to participate.

The second day will feature concurrent group meetings on teacher education, school building specification, public relations, publications and finance.

The 1960 fall meeting in East Aurora will feature all-day workshop sessions and commercial suppliers' exhibits of equipment and materials.

The 1961 spring meeting will be held in Springfield, timed to avoid the DAVI meeting and the Eastern week. The 1961 fall meeting will be held at or in the vicinity of the University of Chicago.

## College President Resigns To Take EBF Consultant Role

Dr. John R. Everett, president of Hollins College in Virginia for the past ten years, has submitted his resignation to the Hollins board of trustees in order to accept a position as consultant to Encyclopaedia Britannica Films and its assorted educational enterprises.

With EBF, Dr. Everett will head a committee to investigate methods of educational communication including teaching machines, films, language laboratories, educational TV and reference books. The study will have an international scope in covering European as well as American educational methods.

## Citizens' School Information Deposited at NSBA, Evanston

The National Citizens Council for Better Schools, in terminating its activities at the close of 1959, has designated the National School Board Association, 1940 Sheridan Road, Evanston, Ill., as depository for its residual stocks of informational publications.

The council and its predecessor, the National Citizens Commission for the Public Schools, published more than a score of inexpensive pamphlets and books and a number of records, songs and band arrangements. When it started its work in 1949 there were only 17 state and local citizens' school committees; a decade later there were

8,000. Numerous national organizations, furthermore, have developed citizens' school projects of their own. Henry Toy, Jr., president of the council, and Mrs. Toy have entered George Meabody College in preparation for continuing their interest in education by becoming teachers.

The National School Boards Association offers a list of its own of pamphlets, reports and other items of interest to parents, teachers and especially school board members. Its 1960 convention, in Chicago in April, will feature a general session on audiovisuals with Charles Percy, president of Bell & Howell, as speaker and a number of AV clinics headed by other leaders in the field.

### West German Photographic Exports to U.S. Rise

West German exports of photographic products to the United States continued to rise during the first nine months of 1959 and totaled \$12,410,086, according to the Scientific, Motion Picture, and Photographic Products division, Business and Defense Services Administration, U.S. Department of Commerce. This compared with \$10,465,812 in the same period of 1958.

The United States is Germany's principal market for still cameras of all types, and shipments to this country in the three quarters of 1959 totaled 208,702 valued at \$6,999,580, an increase of 26.7 percent in number and 6.4 percent in value compared to the same period in 1958.

### Airborne TV On Agenda At Indiana U. Meeting

Airborne television will receive major attention during the Conference and Workshop in Educational Media to be held at Indiana University, June 27-July 1, 1960. The meeting, devoted mainly to the utilization of television for educational purposes, will discuss open circuit and closed circuit television and other types of instructional materials.

Lectures, demonstrations and group discussions will deal with such specific aspects of airborne educational television as plans and possibilities, the nature and role of the medium as an instructional resource, classroom application, program information, and demonstrations of actual educational uses.

### Colleges Join in Telecasting Science Film on Sun

Rocket astronomy, a completely new technique in solar research, and the new knowledge of the sun it has uncovered for science, was presented on the "Conquest" program *The Mystery of the Sun* on January 24 on the CBS television network.

The broadcast, sponsored by Monsanto Chemical Company, was presented in cooperation with the Naval Research Laboratory, the U.S. Air Force, the University of New Mexico and the University of Colorado. Two of the nation's leading experts on the sun appeared on the program. They are Dr. Walter Orr Roberts of the High Altitude Observatory at Climax,

### Calendar

- Feb. 29-Mar. 3—NEA Department of Audio-Visual Instruction, Cincinnati, Ohio.
- Mar. 6-10—Association for Supervision and Curriculum Development, Washington, D. C.
- Mar. 15—Academy of Television Arts and Sciences, forum on ETV, New York.
- Mar. 21-25—National Association of Photo Equipment Technicians, St. Louis, Mo.
- Mar. 24-26—4th National Conference on Aviation Education, Denver, Colo.
- April 10-13—California Association of Secondary School Administrators, Santa Monica, Calif.
- April 19-22—National Catholic Education Association, Chicago.
- April 20-23—EFLA, American Film Festival, New York, N. Y.
- April 24-28—National School Boards Association, Chicago.
- May 4-7—Annual meeting, Institute for Education by Radio and Television, Columbus, Ohio.

Colo., and Dr. Herbert Friedman of the Naval Research Laboratory.

### Educational Film To Be Included in New Center

The Newhouse Communications Center to be established at Syracuse University by gifts from Samuel I. Newhouse, eastern newspaper publisher, will include a "communications library" containing a variety of research materials in mass media. It will comprise an extensive collection of sound and sight recordings, educational film, plus memorabilia from the communications industry—historical materials that will keep on permanent display the great developments of the past.

### Nebraska Makes Title III Allotments for 1960

Nebraska high schools have been allotted \$479,238 on a 50-50 matching basis for 1960 under Title III of NDEA.

In announcing the 1960 figures, F. K. Alexander, state Title III administrator, noted that the money was being allotted to state high schools this year on the basis of \$10 per pupil.

Two of the members of the teaching team of the University of Wisconsin's new TV education course consult with the director on techniques of presenting the lesson on film strip utilization. Prof. Wittich, left, and Lee Campion, center, talk with director Robert Reed. Telefilming of the 42-lesson course took over three months at the University of Wisconsin and Michigan State University. Over 200 man-hours by a staff of 23 professors, technicians, graduate assistants and clerical workers went into each lesson.

# Tired Fears

*Paul C. Reed*

We probably don't mean that people's fears can get tired as their blood allegedly does. What we are trying to say is that we get tired of hearing about a recurring fear teachers are supposed to have. We just can't believe that teachers really do become as fearful as people say they do about losing their jobs every time a new communications tool comes along.

Here's the kind of thing they say: "Classroom teachers felt threatened by the spectre of their jobs being swallowed up by the mechanical monster." Now what mechanical monster was that? An electronic computer? A guided message machine? A motion picture projector? No, the one meant this time was educational television. The sentence, quoted from a recent distinguished publication, attempts to summarize teachers reactions to the new idea of educational television.

What teachers felt that way? How many of them? When? Where? We're skeptical. We doubt very much that such fears ever were seriously felt by teachers. Maybe such fears are the inventions of phrase makers who write about education. Maybe they are the devices of vested interests. Maybe they are the propaganda of guardians of the status quo who resent any change in traditional methods — especially teaching methods. Regardless, they are tired fears. The fear of teachers losing their jobs is a worn-out reason for denouncing new developments.

Before the "monster" of television became a spectre threatening teacher jobs, there was educational radio. During the thirties there was reference in educational discussions and articles to the danger that this new tool, carrying teaching words into an unlimited number of classrooms, might eventually displace teachers. Twenty-five years earlier, when people began talking about the power of the movies to bring learners information and ideas, teachers then were supposed to be opposing this new development for fear they would lose their jobs.

We suspect that this imagined chronic fear of teachers goes back even further than that. Five hundred years ago, when books were first printed, somebody probably said that teachers wouldn't like the idea for fear of unemployment. Learners wouldn't have time to listen to teachers anymore; they'd be busy reading. If that rumor was started then, it could have been a speech teacher who said it first!

We're tired of hearing about teachers fearing the competition of technological improvements in communication and in educational methods. We hope you are too. We hope you will be as impatient with such notions as we are. Challenge the statements! Did you ever know of a teacher who lost his job because of a book? Or an educational motion picture? Or a filmstrip? Or a radio program? Or a television teaching spectacular? Do you think that teachers are so insecure and unsure of themselves that they think the new teaching machines will cause teacher bread lines?

We believe that learning *and* teaching are here to stay. We believe that nothing will ever be invented to surpass a teacher's ability to help another person learn. We also believe that teachers can do their most effective teaching when they have at their command the tools of communication and learning that this technological age has given them.

**Kodak**  
TRADE MARK

*At the New Gardiner Manor Elementary School, Bay Shore, Long Island, N. Y., selected by A.A.S.A. for its exhibit of outstanding school designs, Michael Furin, Visual Aids Coordinator says:*

## **“Even fourth and fifth grade boys operate our Kodak Pageant Projectors.”**

“These nine and ten-year-olds completely set up the projector and get the movie ready to go while the teacher prepares the class for what it’s about to see.

“Our Kodak Pageants long ago proved they were easy enough to operate and could withstand the sometimes overzealous handling by young boys. So, we have given our Audio-Visual Club youngsters the responsibility of not only moving the projectors from room to room, but also of complete operation.”

There are three reasons why even children can operate Kodak Pageant 16mm Sound Projectors. 1) No parts to fool with. Reel arms, belts, cords are all permanently attached. 2) Threading is simple. The red-arrowed threading path is printed right on the machine. 3) Operation is a matter of flipping one switch.

*Your Kodak A-V dealer will demonstrate at your convenience, or write for Pageant Bulletin V3-22.*

*Kodak Pageant Projector* > **EASTMAN KODAK COMPANY**, Dept. 8-V, Rochester 4, N. Y.

1 No AV program can succeed without the enthusiastic support of the administrative staff. Superintendent Harold A. Beall, Springfield, Oregon schools, continually reminds his staff of the value of AV and their responsibility to use it properly.

2 Utilization of equipment and instructional materials depends largely on an informed faculty. Clarence Strong, supervisor, Instructional Materials Center (in center of picture), accomplishes this through personal visits to each school, by . . .

3 . . . asking teachers and AV building coordinators to participate in the selection of materials and equipment . . .

4 . . . and by providing up-to-date handbooks, catalogs, bulletins.

# An AV Program in Action

by E. Milton Grassell

**H**ow does a good audiovisual program operate? What makes it work? Why is it a success?

These are the questions I had in mind when I went to Springfield, Oregon, to see a top-notch audiovisual program in action. During my visit, Mr. Clarence Strong, audiovisual supervisor, answered these questions and many more. For instance: "To have a successful program," he said, "you must have administrative support, financial support, plus cooperation from the staff and community. This is essential."

"But support alone does not guarantee a successful program," Mr. Strong continued. "The best guarantee is to provide good service. Service—the only reason for the existence of our instructional materials center—is the heart of our program."

photos continued →

## Order-taking

Utilization also depends on the accessibility of equipment and materials. A cheerful, but business-like voice receives and confirms orders immediately from teachers and administrators at the Instructional Materials Center.

## Routing

A routing clerk prepares the orders and delivery instructions immediately.

## 7 Ready for Packing

Requests received before 2:30 p.m. are packed for delivery by 9:00 a.m. next day.

## 8 Delivery

An adult school employee—not a student or milk truck driver—makes daily delivery and pick-up service at each school in the system.

## 9 Inspection

Each aid is thoroughly inspected after each booking.

## 10 Repair

No major repair work is done by the director. A dependable adult repairman—not a student—is hired on a part-time basis.

## 11 And . . . Cooperation

Although they may use student operators, each teacher must be able to handle all the equipment. Both 'types' of operator enjoy working together and pooling their knowledge of AV equipment.

# A Study of Teachers' Attitudes Toward Audiovisual Materials

by Gaylen B. Kelley

WHILE there has been a great deal of research effort expended on the various types of audiovisual materials and the administrative procedures for using them, very few investigations have dealt with the classroom teacher as a part of the learning situation involving instructional materials. The attitude that the teacher holds regarding the use of audiovisual materials will greatly affect the success of any audiovisual program.

"The realization is rapidly growing," noted Remmers, "that attitudes, the way individuals and groups feel about the various aspects of their world, are probably more determinative of behavior than mere cognitive understanding of this world."<sup>1</sup> In a recent study, the writer attempted to find the relative importance of various background factors in determining teachers' attitudes toward the use of audiovisual materials.

Audiovisual directors and others in the audiovisual field point to such factors as a teacher's age or sex, the ease of ordering and using materials, the presence of a building coordinator or school system audiovisual director, and many others as affecting the way in which teachers view the use of these materials.

There is a highly significant relationship between teachers' attitudes toward audiovisual materials and whether or not they have had the encouragement of the various supervisors in the school system. When the attitude continuum was divided into the high, medium, and low attitude groups for the statistical analysis, there were fewer teachers in the low attitude group when the teachers had noted, on the background information sheet, that they had encouragement from their supervisors in their use of audiovisual materials. There were more teachers in the low attitude grouping when they noted that they did not have this encouragement.

The supervisors are key persons in the encouragement of audiovisual usage by teachers. A special effort should be made to insure that supervisors are well trained in the proper use of audiovisual materials.

There is a highly significant relationship between teachers attitudes toward audiovisual ma-

terials and the frequency with which they use them in the classroom. Individuals who are involved in teacher training need to become more concerned with the important part played by attitude when they attempt to encourage teachers to use audiovisual materials.

The relationship between *ease of ordering materials and attitude* toward audiovisual materials is highly significant. When the teachers noted that it was easy for them to order audiovisual materials, there were fewer teachers in the low attitude grouping than would be expected from the theoretical frequency for this portion of the chi-square table. Teachers quickly become discouraged when involved and complicated procedures are necessary for the ordering of audiovisual materials. It is important that this phase of audiovisual utilization be kept as simple as possible.

There is a very high degree of relationship between *attitude toward audiovisual materials and satisfactory experience with their use*. We tend to want to repeat those experiences that are satisfying and, on the other hand, retreat from unsatisfactory experiences. Thus when materials do not arrive on time, equipment does not work, and we have a generally unsatisfactory experience with our use of audiovisual materials, we have a tendency to not place ourselves in the same situation again. Each unsatisfactory experience with the use of these materials is apt to have an effect on teachers' attitudes toward their use.

AS might be expected, there is a highly significant relationship between the *amount of equipment available and the attitudes of teachers toward the use of audiovisual materials*. An analysis of the distribution of attitude seems to indicate that when teachers have access to a great deal of equipment, they are more moderate in their attitudes toward the use of audiovisual materials. When they do not have all of the equipment they need, they tend to hold either highly favorable attitudes or on the other hand, very negative attitudes. It may be that those teachers who do not have the equipment that they need tend to be focused into two attitude groups: those who take the lack of equipment as a stimulus to greater effort, perhaps in using types of materials that do not require equipment, and those who take a negative attitude and simply give up in defeat.

H. H. Remmers, *Introduction to Opinion and Attitude Measurement* (New York: Harper and Brothers, 1954), p. 15.

## Research Method For This Study

In order to test the validity of some of these assumed relationships, an attitude rating scale was constructed by means of the Thurstone technique. An initial pool of statements expressing some sort of attitude toward audiovisual materials was collected from teachers on the various grade levels. These statements were edited and sent to a jury made up of members of the Department of Audiovisual Instruction of the National Education Association. These judges rated the statements on a nine point rating scale according to the degree of negative or positive attitude expressed.

By means of statistical techniques including a determination of the semi-interquartile range of statement judgments for each of the items on the scale and an item analysis, 22 statements regarding attitude were selected which covered the continuum from a very negative to a very positive attitude toward the use of audiovisual materials. A split-half reliability of .64 was obtained after correction by means of the Spearman-Brown formula. The attitude rating scale along with the background information sheet, which requested background data to be used in making the comparisons was administered to 995 teachers from kindergarten through the college level. Twenty-four comparisons were made between background factors and an index of attitude obtained from the attitude rating.

The returned rating scales were scored and placed in rank-order according to size of score obtained. These scores were divided into three categories corresponding to high, medium, and low attitudes toward audiovisual materials.

Chi-square tables were then set up for the various comparisons between attitude as measured by the rating scale and the various background factors. The .05 level of confidence was chosen to determine significance. In the following discussion of the results of the various comparisons, the statement, "highly significant relationship," means that the comparison was significant at the .01 level of confidence. Twelve of the comparisons between attitude and background factor were significant at the .01 level of confidence, while four were significant at the .05 level of confidence.

It should be remembered that the fact that there is a significant relationship between attitude and a specific factor does not mean that there is a cause-effect relationship between the background factor and teachers' attitudes. For example, the fact that the comparison of attitude with the sex of the teacher is highly significant, does not mean that sex determines attitude. For some unknown reason, women tend to score higher on an attitude rating scale relating to use of audiovisual materials than do men.

There is a very high degree of relationship between *teachers' attitudes toward audiovisual materials and the frequency with which they are used by fellow teachers*. This is probably another example of what has been termed "other direction." We tend to take our direction or cue for behavior from our peer group, in this case other teachers who are close associates. It takes courage and extra effort to utilize audiovisual materials when teaching in a system where such techniques are frowned upon by other teachers and administrators.

There appears to be a relationship between the *grade level on which a teacher works and his attitude toward audiovisual materials*. This comparison was highly significant. Kindergarten and elementary level teachers tend to have better attitudes (score higher on the rating scale toward audiovisual materials than do those in junior high and high school. On the college level the distribution of attitude is about normal with the obtained and theoretical frequencies in the various attitude categories closely approximating one another.

The old saying, "teachers teach as they have been taught" comes to mind when it is noted that there is a highly significant relationship between the *type of learning experience the teachers have had during their training and their attitudes toward audiovisual materials*. If their college instructors used these materials often they tended to have a higher attitude toward their use. If college instructors used audiovisual materials only seldom, their students—when they started teaching—tended to have a poorer attitude toward the use of these materials. We should make every effort to encourage the use of audiovisual materials in our teacher training institutions if we want our students to use these materials when they begin their teaching careers.

Such environmental factors as *ease of room darkening, availability of electrical outlets, screens, chalkboards and bulletin boards are highly significant in their effect on teachers' attitudes toward the use of audiovisual materials*. These factors should be considered when older school facilities are being remodeled and new buildings are planned.

IT is interesting to note that there is a highly significant relationship between the *teacher's sex and his attitude toward audiovisual materials*. There is a definite tendency for women to have better attitudes (score higher on the rating scale) toward the use of these materials than men.

When the *materials used by teachers are in poor condition the teachers tend to have lower attitudes toward their use*. Film libraries and others responsible for the circulation of audiovisual materials must make certain that they are in good physical condition. Broken films, torn sprocket holes, tattered maps, charts, and pictures, all contribute to the formation of teachers' attitudes toward audiovisual materials. This was also a highly significant factor in terms of attitude formation.

*College course work in audiovisual materials and training in the production of these materials* are both significant factors in the formation of attitude. Those who have had either formal

course work in audiovisual education or training in the production of these materials tend to have better attitudes toward their use.

There is a significant relationship between a teacher's age and his attitude toward audiovisual materials. Younger teachers seem to have a distribution of attitude between the high, medium, and low attitude groupings that would be expected from the theoretical frequencies for these categories. Those teachers between the ages of forty and fifty tend to have lower attitudes, and those over fifty years of age tend to be more moderate or conservative in their attitudes toward these materials. The older teacher is not, however, the teacher with the poorest attitude toward the use of audiovisual materials.

**T**HERE is a significant relationship between the number of years of formal education and attitude toward audiovisual materials. As a group, teachers with one to four years of training beyond high school have better attitudes toward these materials than do those with five or six years of training.

The factors that have been mentioned thus far have been significantly related to teachers' attitudes toward the use of audiovisual materials. The following background factors were not significantly related to attitude.

The amount of teaching experience is not a significant factor in relation to the development of attitude toward audiovisual materials. It is, then, not necessarily those with long years of teaching experience who have poor attitudes toward the use of the materials.

One often hears teachers and audiovisual people mention that frequent equipment failure inhibits individuals from using audiovisual materials. This feeling was not verified in this study, as the comparison between frequency of equipment breakdown and attitude was not significant.

The subject matter areas in which teachers work is often thought of as being a factor in how they feel about the use of audiovisual materials. The areas of English, social studies, science and mathematics, business, music and foreign languages were differentiated in the study. It was found that the subject matter area in which one teaches is not a significant factor in determining attitude toward the use of audiovisual materials.

The presence or absence of a school system audiovisual director or a building coordinator in a school building has no effect on attitude. Whether the director was a full-time or part-time director was not significant as far as the development of attitude is concerned. It would appear that audiovisual directors are not functioning at a level where they are able to affect attitudes toward the use of audiovisual materials. It is interesting to contrast the effect of the supervisor with that of the audiovisual director in terms of their influence on attitudes. One of the most significant comparisons was between the encouragement of audiovisual usage by supervisors while the least significant relationship was between the presence of an audiovisual director in the school system and attitude.

There is no relationship between teachers' attitudes toward audiovisual materials and the availability of funds for audiovisual materials within the school system.

Teachers were asked to rate their own mechanical ability. When these ratings were compared with scores on the attitude rating scale it was found that there was not a significant relationship between their ratings of mechanical ability and attitude toward audiovisual materials.

The results of this study emphasize the importance of recognizing the place of attitude in any attempt to analyze the utilization of audiovisual materials. The teachers' attitudes may be more important in determining the use of audiovisual materials than both knowledge about materials and skill in their use. The statistical technique and the design of the study itself preclude determining the reasons why the comparisons turned out as they did. While we can only guess causal factors in the various comparisons, the knowledge that certain factors are significant while others are not is important to individuals working in this field.

### A Comparison of Teachers' Attitudes Toward Audiovisual Materials and Various Background Factors

Factor	Chi-square	.01	.05	NS
1. Supervisors' assistance	104.72	°		
2. Frequency of use and attitude	143.27	°		
3. Ease of ordering	68.27	°		
4. Satisfaction with own use of aids	42.50	°		
5. Amount of equipment available	48.35	°		
6. Fellow teacher use of materials	49.58	°		
7. Grade level	40.23	°		
8. College instructors' use of aids	30.22	°		
9. Amount of material available	17.53	°		
10. Physical organization of classroom	21.79	°		
11. Sex of the teacher	11.82	°		
12. Condition of materials	10.06	°		
13. Training in production	8.94		°	
14. Age	15.48		°	
15. Years of formal education	14.68		°	
16. College course work in AV aids	6.43		°	
17. Years of teaching experience	12.37			°
18. Equipment breakdown	11.00			°
19. School system AV director: part-time versus full-time	5.86			°
20. Subject matter area	9.75			°
21. Funds allocated for AV education	3.55			°
22. Teachers' mechanical ability	3.96			°
23. Building coordinator for AV aids	.96			°
24. AV director in the school system	.33			°

.01 = significant at the .01 level.

.05 = significant at the .05 level.

NS = not significant.

Note: The varying degrees of freedom associated with the different comparisons account for factors that are not significant having higher chi-squares than some factors that are significant.

Class 5-5 presents A Lesson In Brotherhood. All the actors are members of class 5-5. Remember that all these scenes are acted out, but that they could be real. We hope that after you watch these slides you will never let prejudice become a part of your life.

The teacher asked the children to bring in two eggs. One egg was brown, the other egg was white. The eggs were shaped the same, felt the same, but were different in color.

## A Lesson in Brotherhood And Slide Making

If we look around us, we see that some children are dark haired, some are fair haired. We all do not want to look exactly alike. Some children are Negro, some are white. We don't dislike a person simply because they have dark hair. We should not dislike a person just because they have dark skin.

Two boys decided to do some research about Negroes. They found out that Negroes such as George Washington Carver, Jessie Owens and Ralph Bunche added a great deal to American History. The future of our country depends on all people working together.

the teacher asked one of the boys to break the two eggs. The boy carefully broke the eggs and looked at the insides. There was no difference. Both eggs now looked the same.

by Alan V. Grossberg

I HAD just finished showing my class some slides taken at Jamestown, Virginia. They reacted very enthusiastically, seeing famous historical sites and history book backgrounds portrayed on the screen in vivid colors. One of the children asked if we could take slides in class. This suggestion set off a chain reaction, and every child wanted to see himself projected on a screen.

We had been discussing brotherhood for the past few days. We had discussed the fact that we work pretty well together even though we come from different backgrounds. The children wanted others to profit from our experiences and our mistakes. Some of the youngsters wondered if we could combine slide making and brotherhood, and they all seized on the idea.

Some of us need help in spelling yet can give help in arithmetic. It is a give and take proposition. It is a great deal of fun to work together.

Just as there is no difference between the insides of the two eggs there is no difference between the insides of people. A Negro and a white boy have the same blood.

They knew that each slide would have to be a separate scene, but it was generally felt that a story was needed to tie all the scenes together. The children worked on this for several weeks. Writing a story is difficult enough, but writing so that individual scenes can be made is very hard and trying. After dozens of revisions the story script was finished, with each scene described on a 5x8 index card.

We now had some technicalities of actual production to cope with. The public library aided in the solution of several problems. Information gathered from photographic guides helped us determine just what film and flash bulbs would be best suited to our needs. The children also learned quite a bit about camera techniques and successful color photography. This information became very useful when we were producing our slide show.

The class wished to purchase their own film. They made craft articles which they sold at a PTA sale. Pot holders were made and sold by the

The teacher asked two boys to hold up their last spelling Retest papers. Both papers were 100%. The color of your skin has nothing to do with the way you think.

These dolls show us that there are many different races and nationalities in this world. If all these people stopped to fight one another because of different colored skin or different clothes there would never be any peace and we would soon destroy each other.

dozens. Some children designed and made ceramic ash trays which were very popular at the sale. They made enough items to pay for the film and the flash bulbs.

The camera equipment was mine. We used a 35mm camera with flash attachment, with the children setting up each scene. Some were arrived at rapidly; others took a long time because all the children involved in production were not satisfied. The children figured out the proper lens opening for each exposure by using the data supplied with the film and flash bulbs.

The culmination of each scene was the bright flash as one of our cameramen pushed the button that captured the picture for us. We took pictures in the classroom, cafeteria, basement, art room and assembly. After two weeks of shooting we were finished. The film was dispatched to a commercial processor and we waited the return of our precious slides.

The entire class agreed to be friends. They shook hands on it. Everyone would join in the games. They would work together to make their teacher proud of them.

The children of Class 5-5 now understood each other. They discussed brotherhood in class. They had a poster contest to celebrate brotherhood week. All the posters in this assembly were done by the class. The ones on the screen were judged to be the best.

The slides came. I knew that until they were viewed nothing would be accomplished in our class. The visual aid teacher sent up a projector and screen. We then saw our slides.

They were perfect — not a poor one among them. We arranged them in proper sequence, numbered them, and once more projected them. We had captured, on 34 slides, a program explaining what brotherhood meant to us.

Our next task was the preparation of a final commentary. We projected each slide for a third time and as we carefully studied it on the screen. The speaking script was written. We taped the script so that the slide projector and the tap recorder could be operated simultaneously.

We shared our production with the remainder of the school. Results were immediate. Letters and comments—the tangible rewards for our hard work poured into the classroom. We had shared our experiences with the other students.

The children seem happy. They work well now that they understand each other. They help each other in their work. Each has something to offer to the other.

# A New Slant on Overhead Projectors

By J. F. Hohlfeld

THIS is a plan for facilitating the use of the overhead and opaque projectors through inexpensive modifications of their accessories.

The overhead projector is probably one of the most effective visual aids in the classroom today. We never cease to discover new applications, new presentations and new developments for its use in meaningful teaching. In my own field of mathematics there is no other device to compare with it. However, one difficulty exists.

The machine operates on a short focal distance, with the machine and the teacher usually in front rather than in the rear of the classroom. With the machine on a high stand as, in Figure 1, and the teacher beside it, the students in the front and center of the room are liable to have a view of the screen as in Figure 2.

Of course, if rearrangement of seating presents no problem, as in the case of a small class, it is very easy to get around this difficulty. But some of the projector's best applications are for large classes. Furthermore few teachers like to reseat their students every time they want to try a new presentation.

The first impulse in attacking this problem is to place the machine low enough that all students can see over it. This either brings the picture down with it or, if the machine is tilted

upward (projecting against a vertical screen), it creates a distortion called the 'Keystone effect'. In this situation the bottom of the image is much smaller than the top, and part of the image will be out of focus regardless of adjustment.

To correct this distortion, one needs simply to place the screen in a position perpendicular to the projection beam. With a permanent screen installation in the room, this correction can be accomplished by hanging the screen on the ceiling rather than on the wall. It should be hung parallel to the wall at the bottom of the screen.

A side view of the classroom in use now looks something like Figure 4. All students in the classroom now have an unobstructed view of the screen.

This development has been made entirely in terms of the overhead projector. The improvement works just as effectively for the opaque projector, using the same screen and cart, and set up exactly the same way.

Prior to publication of this story, *Educational Screen* received the following note from Mr. Hohlfeld:

"I have been told by one of the manufacturers of overhead projectors that the techniques involving the tilting stand and slanting screen have been used by them and by their dealers in the past. At the time of writing the article I thought my idea was original. While this originality is now destroyed, I think the worth of the idea has been indicated, and I believe the value of the story is thus possibly enhanced."

So do we. And we want to add that Mr. Hohlfeld is willing to forward more specific information on the cart and screen installation to those who request it and enclose a stamped return envelope.

# A New Style in Audiovisual Cataloging

by Thomas H. Boardman

**T**HE lifeblood of an educational film library is its catalog. This is the artery that reaches the customer, keeping him informed of the material the audiovisual center has to offer. I feel that over the years the film catalog has had less thought given to its improvement than any other phase of the program.

Traditionally the catalog has been an indexed publication with notations as to content, producer, running time, etc. It has always been an expensive budget item, especially if extensive distribution is planned. The very cost of production raises many important questions: Can an expensive catalog be sent to every teacher in the state; just one to a building; just to every principal, superintendent and audiovisual director? Shall it be sent to teachers and schools that don't use our service? What about out-of-state distribution? Can we afford to supply individuals: churches, civic groups or garden clubs who may not more than one or two films per year?

Frequency of revision is another factor to consider. Since a film library is changing constantly through additions and deletions, how often should a catalog be produced? Is it economically wise to revise every two years, and if the interval is longer, are supplements an effective method of keeping the customer informed?

These questions must be answered. But I am afraid that too many times they are answered not by what would be ideal, but by the cost of production.

Aside from the expense and in many cases its sheer bulk, the biggest failing of the all-inclusive catalog is the fact that a relatively small number of the total items listed are of interest to any given customer. This means we are spending money informing customers about materials in which they have no interest and sometimes making it difficult for them to find the materials in which they are interested.

Certainly if expense did not have to be considered, I think it would be agreed that the best catalog distribution would be a new catalog at least every two years to every educator who desired one and to any group or individual who might be a customer. So, to better attain the optimum and yet keep the expense down, the Visual Aids Service of the University of Illinois decided a year ago, when it became necessary to re-issue its catalog, to produce a series of subject area catalogs instead of the usual large, general catalog.

After deciding to produce subject area catalogs, the next major decision was to decide where to make the divisions. It was decided, on the basis of the nature of teaching at the various levels, to produce a single catalog listing all subject areas for the elementary grades (kindergarten through 6th grade) and 16 individual subject area catalogs for those films that were applicable to the junior and senior high schools, college and adult groups. The Primary and Intermediate Film catalog, largest of the series, was printed at a cost of only 33 cents per copy, and the cost of printing the other subject area catalog varied from 11 to 22 cents each. Therefore the cost of supplying all the teachers in an ele-

Here are nine of the 19 subject area catalogs produced by the Visual Aids Service of the University of Illinois. Their tasteful design has been a factor in the ready acceptance of this new concept of AV cataloging.

mentary school with the elementary catalog and distributing the 16 subject area catalogs to all teachers and groups engaged in teaching the individual subjects would not be prohibitive.

The catalog revisions will be scheduled on a revolving basis with a cycle of revisions to be completed in two years. This will enable us to schedule the workload of both preparation and printing more evenly for greater economy. The savings realized from better scheduling will more than offset the increased mailing costs brought about by separate mailings of the subject area catalogs.

I see no reason why subject area cataloging isn't applicable to the county or city audiovisual center as well as to the large rental library. Our main concern is to have teachers use the materials and, of course, use them intelligently (which is another problem). It seems reasonable to assume that the easier we make it for a teacher to know what is available in her subject area, the

more materials she will use in her classrooms.

Since we have had no guide to follow in this new venture, we of course have made many mistakes that we will be able to correct in our first revision. However, in spite of our mistakes, we have received many complimentary letters and comments about our new method—in fact, more than enough to convince us that this type of cataloging is appreciated by the teachers because of its increased usefulness.

We have noticed that shortly following the mailing of a new subject area catalog there has been a marked increase in the requests for films within that area—so much so that we now spend a much greater part of our yearly budget for additional prints to meet the increased demand. This is the most conclusive proof that our decision to abandon the large all-inclusive catalog in favor of less expensive subject area catalogs which could be given wider distribution was a wise one.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## Reading Music: Learning About Notes

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16 mm, sound, color or black and white, 1959. \$110 or \$60. Teacher guide available.

### Description

Through teacher demonstration and children's participation, *Reading Music: Learning About Notes* introduces symbols of musical notation and how they are translated into meaningful patterns of sound through melody and rhythm.

The film opens with Sarah and Bob introducing themselves and announcing that they are going to learn a new song, "The Humming Frog," from Mrs. Edwards.

After a few preliminary remarks, Mrs. Edwards asks everybody to imagine a drummer beating his drum since the song to be learned is a song to which one can march. As she says this, the picture cuts to a drummer marching to the beating of his drum and then back to Sarah and Bob beating time with their hands while the teacher sings.

Having thus introduced the song, Mrs. Edwards invites the viewers to look at it. A close-up of the music shows that some notes look alike and when she sings them they sound alike. Also a close-up of the piano shows how notes go up and down or stay the same. The teacher explains that when notes move from one line to the space next to it and then to the line next to the space the notes move in step. Through illustrations, putting to good use a series of close-ups, she explains step up, step down, skip, and same note progression.

Again Sarah and Bob beat the rhythm while Mrs. Edwards plays the first two measures of the song. She calls attention to the fact that each note takes one beat. Going through the song, the children find that sometimes a note gets more than one beat and at other times gets less than one beat. The teacher explains this by us-

ing aural and visual illustrations.

In closing Mrs. Edwards asks viewers to join them as they sing *The Humming Frog*.

### Appraisal

The film should find greatest use in grades three through five as an introduction to the characteristics of notes and in grade six as a review of certain fundamentals in music. With proper orientation it could even be used in junior high. The ages of Sarah and Bob may presuppose the viewers to be of primary and intermediate levels. To some evaluators, however, the little girl is a little too young for the film's content.

The technique of introducing music fundamentals and analysis of its structure from both the visual and auditory standpoints is very effective as is the use of a series of close-ups of the music and the piano to illustrate the characteristics of notes. Thus, elementary education students and teachers could very well profit from this film, too.

—Nita Barcelona

## A Way of Life

(Missouri Conservation Commission, Jefferson City, Missouri) 27 minutes, 16mm, sound, color, no date. \$170.

### Description

*A Way of Life* shows the constant drama of life in the wild—a drama involving prey and predator, including man. None of the actors is a villain because each portrays his own way of life.

The film opens by showing that primitive and pioneer man were predators of wild life by necessity while, in contrast, modern man raises his own prey in the form of domesticated animals. It points out that man has hunted for sport for many years and gives as examples medieval falconry and modern hunting with weapons and man's skill and wariness.

Although man, one of the chief predators, is free from predation, wild animals must struggle to eat and avoid being eaten. The predator survives by being expert at capturing their prey; for example, the weasel uses his quickness and keen sense of smell to capture a field mouse and the slow box turtle catches the slow earthworm.

The film continues by showing that man tends to resent the more efficient predators but some species that he values highly, such as song birds, are predators too. The antics of a bird capturing and eating an earthworm appear funny but it is a most serious business of survival.

Sports fishing is really predation modified to produce sport and recreation. The film shows that the grasshopper is a natural prey for fish but man, the predator, uses grasshopper lures to catch bass. The sportsman values the quail highly and the skunk less; the film pictures a skunk eating quail eggs but points out that the quail will replace the lost eggs late in the season when there is a better chance of survival for the young.

The film then gives the qualifications of a good prey, such as intelligence, wariness and speed. It shows a fox capturing a rabbit and bass catching bluegills as the narrator tells that the surplus population goes to the predators.

All animals must eat to live. Some animals, such as caterpillars and mice, are destructive while others help to keep the harmful predators in check. A hawk, man's aerial defense against small rodents is shown capturing a mouse and a red winged blackbird eating harmful insects is observed. It is also seen that there is predation among the smaller animals; for example, one insect may feed upon another.

The film shows that each animal has its own protection—the pocket gopher burrows underground, the weasel is quick and has a keen sense of smell, the killdeer uses ruse and camouflage. A blue jay is observed warning the animals that a Cooper's Hawk threatens. A mother killdeer

...es its broken-wing act to divert the attention of the hawk from the fledgling kilddeer but one youngster ventures forth and falls prey to the hawk. Thus, the slow, stupid and weak are captured while the alert and healthy survive assuring good stock to keep the race perpetuated.

Domesticated animals such as the chicken have lost their means for protection and fall prey to the so-called destructive varmints." However they are only part time varmints because any of these predators prey upon animals which cause great economic loss. Owls, for example, are man's best defense against rodents.

The film continues by relating that predators are responsible for those qualities in game which the sportsman admires: namely, speed and alertness. A dramatic chase of a coyote after a rabbit is shown. The alert rabbit uses speed and dodging to escape and the coyote must seek a weaker, less cunning prey.

Man's hunting is pictured as a form of super-predation as he trains his predators (dogs) to find the prey and reserves the right to kill for himself. The narrator states that man may change the environment but he sometimes destroys rather than improves.

A *Way of Life* concludes with the statement that we must control predation, not condemn it, because it is an essential instrument in a way of life.

### Appraisal

A *Way of Life* is a fascinating true-life drama of survival, of eat and be eaten, of prey and predator, and of man, with his weapons and intelligence, the super-predator tracking down his prey and controlling the environment for better or worse. With its on-the-spot coverage of some of the struggles for existence, the film assumes an authoritative and realistic demeanor—it actually shows the exciting chase of coyote after rabbit and the capturing of a mouse by a hawk. By the latter example and others, it helps to dispel hasty generalizations adopted by man concerning the degree of notoriety associated with certain animals.

This film will be useful on the junior high, senior high, and college levels in units concerned with the balance in nature, the struggle for survival, the interdependence of living things and conservation. It may also promote discussion concerning the influence of man on various plant and animal communities. It will have some use on the intermediate level and its appealing visuals will maintain

interest for this group throughout its above average length. General audiences will likewise find this film interesting and educational.

—George Vuke

## Volume of Cubes, Prisms and Cylinders

(Delta Film Productions, Inc., 1821 University Avenue, St. Paul 4, Minnesota) 18 minutes, 16mm, sound, color or black and white, 1959. \$150 or \$75. Teacher's guide available.

### Description

Using familiar buildings and objects as examples of solid geometric forms, *Volumes of Cubes, Prisms and Cylinders* employs graphic designs of these forms to illustrate the calculation of their volume through development of the generalization  $V=Bh$ .

As the cargo from an airplane is unloaded by conveyor belt, the shapes of the various boxes and containers are identified—cube, rectangular prism, and cylinder. More examples of these same forms are given in the sugar cube, buildings and a drinking glass. The terms to be used in the film—cubic inch, cubic foot and cubic yard—are discussed before presenting a formal definition of a geometric solid.

In determining how to calculate the number of cubic inches in a rectangular prism, the formula  $V=lwh$  is developed. This formula is used with different kinds of prisms in computing volume until it is found that the base of a prism times the height will give the volume of any prism.  $V=Bh$  is then applied to a parallelogram and a cylinder to calculate their volume.

### Appraisal

Upper elementary and junior high mathematics teachers will find this production a welcome one in teaching concepts of volume. First of a series of three films, *Volumes of Cubes, Prisms and Cylinders* builds up the concepts, proceeds to the definitions or formulas, and then returns to the application from which the concepts were built. The distinction between the definition of an area and the formula used to find the area is an appreciated effort. The committee feels that this film makes a valuable contribution toward teaching the volumes of solids. It takes a well-planned film to present an academic message like this successfully.

—J. Robert McAdam

from afar...

they look alike

but what a difference in picture quality!

Magnified view of lenticular surface—which is in effect a complete sheet of reflective lenses.

One is a conventional screen—the other a new lenticular Radiant Screen. You'll be astonished at the difference this new reflective surface makes. Your pictures have more brilliance, more clarity, rich, more natural colors. In addition—the lenticular screen is extremely effective for projection in darkened or even lighted rooms where no extreme or unusual lighting conditions prevail.

lar screen is extremely effective for projection in darkened or even lighted rooms where no extreme or unusual lighting conditions prevail.

## RADIANT'S new lenticular screens

for lighted or darkened rooms

Available in Wall Roll-up Screen (Model WEDO) with exclusive STRETCH-BAR that provides an instant flat, taut surface. When not in use the lenticular screen can be rolled up. Washable, fungus and flame-proof. In sizes 40" x 40" and 50" x 50".

Also available—lenticular portable TRIPOD Screens—in choice of two lenticular surfaces—Uniglow and Optiglow.

### Screens for every A.V. need

Every type of surface—wall, ceiling and tripod models—automatic electric—every size—are in the new Radiant Screen line—the world's most complete line of screens.

# FILMSTRIPS

by Irene F. Cypher

A few years ago a student teacher, about to go out on his first teaching assignment, asked, "How long should I talk to each frame of a filmstrip?" The other week a veteran teacher with years of experience asked the same question, and it set us to thinking.

By whatever means we have and at all costs we must get across to classroom teachers the fact that filmstrips, with other types of materials, are intended to provide for many types of classroom experiences. We should beware of setting up such hard and fast patterns that we forget the thrill and value of launching out on a new way of explaining matters to boys and girls. It is for this reason that we have always rather deplored the necessity of indicating grade levels in catalog descriptions of materials. Sometimes a filmstrip labeled as intended for 4th grade can be mighty useful with an older class—particularly when there is all too apparent indication that the older ones were not too well prepared when they were introduced to a subject.

We feel like adopting the warning given in a well-known poem-story: "Grade-level labels will get you if you don't watch out, so ignore them once in a while!" Don't talk to a filmstrip; let its picture content talk to you and your class, then you can turn your discussion to related implications rather than to mere picayune dissections of what you have seen on the screen. Use your filmstrips to provide a quick review of material learned in other classes and then move along into new fields where this material is applied in more advanced situations. Be flexible and don't be afraid to say to your pupils, "these pictures do not give the whole story; let's try another filmstrip and see if we can find an answer to our question."

*Central Europe* (6 strips, color; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Ill.; \$36 per set, \$6 each strip.) So much that has happened in the course of world events involves understanding the peoples and countries of Central Europe. With the help of these picture sequences we look in on life in West Germany, the Netherlands, the

mountains and valleys of Switzerland, Belgium and the Rhine Valley. In each instance people are related to the work and resources of the areas. This provides a broad basis for social geography and should stimulate recourse to considerable map and current magazine and newspaper study. Filmstrips of this type should be used in connection with collections of study materials, reports on readings and the watching of television programs dealing with world events. There is a wealth of background information, and they are good for study interests of the middle and upper grades.

*Elementary Science Series, Set No. 7* (6 strips, color; produced by Young America-McGraw Hill Co., 330 West 42 St., New York 36, N.Y.; \$32.50 per set, \$6 each strip.) Any teacher who works with today's young scientists needs to be well supplied with materials to explain the facts illustrated in this series. We go from the contribution of prehistoric animals and the nature of stars to what creates pitch and sound, how our bodies are constructed to fight disease, and the nature of atoms and molecules. The sequences of this set are intended to help clarify concepts and prepare the way for detailed study of scientific data. These strips could be used at any point in text study and are closely related with the science units as now included in the elementary science curriculum.

*Magnets* (6 strips, color; produced by Jam Handy Organization, 2821 E. Grand Blvd., Detroit 11, Michigan; \$31.50 per set, \$5.75 each strip.) No one can be exposed long to a study of science without coming upon a fact related to the use of magnets or the relation of magnetic force to scientific processes. This series goes with considerable detail into the nature of magnets, how they are used and why they act as they do. The strip dealing with the relation of magnetism to molecular and electron theories is particularly good and will be found helpful for science work and also for social studies and world geography. Diagrams indicating how magnets work are also well presented and will be found very

helpful in clarifying what is shown in class science experiments. This series may be used from kindergarten through grade six, and the various strips are so presented that the work gets progressively more detailed and leads to the work of the next grade. A good series to have to meet the needs of the different grade levels indicated.

*Masters of Modern Art—Pierre Auguste Renoir* (single strip, color; produced by Life Filmstrips, 9 Rockefeller Plaza, New York 20, N. Y.; \$5 with manual.) Not even modern art strips could take us to all the places where the works of an artist are to be found, and the student is often at a loss to see certain masterpieces that are scattered in various museums and collections. That of course is one of the strong points in favor of a filmstrip such as this, for it brings together in one sequence 50 examples of Renoir's greatest work. Personally we like it when full advantage is taken of the filmstrip frame to show a painting and we prefer a minimum of captions with such material, for the manual gives quite ample notes. This is a virtual field trip to see an art collection and the viewer should have full opportunity to observe and study pictures, for the selection is good. There are no grade restrictions for such a filmstrip, and it should be used as a reference background whenever the artist or his contribution to our cultural heritage is considered.

*Newswriting* (4 strips, color; produced by Filmstrip House, 347 Madison Ave., New York 17, N. Y.; \$20 per set, \$6 each strip.) A school newspaper should be well written, both from the point of view of the value of news and from the standpoint of quality of writing. Young journalists can benefit from the subject matter of this series, which offers help in learning how to write lead articles, gather news items, plan and write news stories and reporters' accounts of events. Pupils are always interested in the activities of the school news staff, and they should be helped to make their activities fruitful. It is intended for junior and senior high school, and will be found good for use in the classroom and for showing at news staff meetings.

*Reading Series* (41 strips, color; produced by Pacific Productions, Inc., 414 Mason St., San Francisco, Calif.; \$5 per strip, prices vary in sets of 4 to 11 strips each.) The building of both interest and skill in reading is

vital to school work and for personal value. The various strips of this series are so planned that there is material to meet all the facets of building reading skill. One set pertains to learning how to use books efficiently, one deals with learning to use the dictionary and other sets show how to build up reading understanding and how to work with vowels and consonants. The subject content can be adapted to both group and individual pupils needs and it is a good series to have for all units of the reading program.

*The UN Way to Freedom* (single strip, color, with two reading scripts; produced by National Council of the Churches of Christ, in the U.S.A., 475 Riverside Drive, New York 27, N.Y.) In light of many recent happenings it would seem that there is a great need to consider the subject matter of this strip. Pictorial sequences are provided to channel our thinking to the right of all people to live in dignity and without harm from prejudice. There are no captions on the pictures. One reading script is intended for use with club and other lay groups whereas the other script is prepared for United Church Women and church groups. Personally we would not relegate the strip to these groups alone; we think the material of the strip has value for classroom use in schools. The filmstrip calls our attention to the refugee group and their needs and to the problems of providing for the daily rights of peoples all over the world. The photographs are clear and the entire subject matter very timely. If the UN is to survive, the pupils in our schools need to understand the role of the UN in all phases of world living. This strip helps in this respect and is good material.

*The Chronicle of America Filmstrips* (15 units, black and white; produced by Yale University Press Film Service, 386 Fourth Ave., New York 16, N. Y.; \$97.50 for the complete series, \$7 for each unit). This series takes us from the landing of Columbus to the period of the war between the states. It includes sections on the trials of the early settlers, the French and Indian Wars and the opening of the West. It is of course built on a basis of documentary material drawn from the collection used in making the *Chronicles of America* photoplays. As such it provides historical research data of many types—manuscripts, documents and pictures. It has been authenticated by detailed research and the information is voluminous, providing a basis for research and detailed study.

# NEW ARGUS DIRECT WIRE TV CAMERA

*... Feeds directly to antenna posts of any standard TV receiver. Uses normal room illumination, needs no boosters for any line length under 1000 feet. Feed up to five cameras into each receiver if you wish . . . or link multiple receivers to a single camera. Costs just \$595 with turret and 1-inch f:1.9 lens . . . or \$719 with regular, telephoto and wide-angle lenses. Matching receivers, monitors, and accessories make this the most versatile, least expensive closed circuit TV you can buy. # AUDIO

by Max U. Bildersee

A university has done it again! And perhaps their accomplishment will be a challenge to other institutions of higher learning.

*Voices of the American Revolution* is one of those rare superb recordings about which you want to "shout from the rooftops," urging your friends to "buy now" before it is too late. The recording can be ordered from the Clements Library, The University of Michigan, Ann Arbor, and is worthy of your immediate action.

*Voices of the American Revolution* is a dispassionate study of the reactions of men to command and war. It is at once both an American document and a document of humanity. The thread of continuity is supplied by Dr. Howard H. Peckham, director of the library. He speaks a simple series of notes which link excerpts from diaries and letters, reports and publications which mirror the political, military and personal trials of famous men of the period.

Through these papers and official documents, American and British soldiers and statesmen relate their reactions to the events of the war years and the Treaty of Paris. The time covered is from Lexington and Concord to the negotiations for recognition as an independent nation. In the former, appropriate voices read from the available diary material of the day, and in the latter we are treated to a reading from Benjamin Franklin's statements concerning the British attitude even as late as 1783.

A word about the Clements library is in order. According to the American Library Directory it is considered a "special" library. The material on the recording has been chosen from among the more than 200,000 manuscripts in the library collection which deals with such subjects as the discovery and exploration of America, colonization and the colonial wars, westward migration, the War of 1812 and so forth. Among the famous persons whose papers have been collected by the library are Columbus, Franklin, Washington, Paine, Lincoln and Theodore Roosevelt.

Obviously the library is equipped to do the job they have done in *Voices of the American Revolution* not only by virtue of the collec-

tion they boast but also through Dr. Peckham's particular ability to select significant items and to prepare and deliver appropriate commentary. It is hoped that this recording will be the first of a long series in this area to be conceived and prepared by Dr. Peckham and produced by the University of Michigan radio service.

We have had the pleasure of observing many people as they listened to this recording. The auditors were students and teachers, representatives of a variety of grades and of professional interests in education. Many immediately expressed a desire to 'hear it again' and some asked to borrow the recording so that it could be introduced to members of the family. More than one took immediate notes and expressed the intent to "buy it for myself" or to "buy it for the children" and even, in one instance, to "buy it for my grandchildren" so that they could hear it when they grow up. It has universal appeal and each age group seemed to get different but real values from the listening experience. It can be used in instruction in junior and senior high schools and may be used for assigned listening by older students or by capable elementary school students.

Three new titles are offered by Ottenheimer: Publishers on their Cabot label. These are *Let's Put On A Play*, *An Introduction to the Ballet* and *Let's Look at Great Paintings*.

*Let's Look at Great Paintings* is different insofar as it is an effort—a successful effort—to give audio scope to a fundamentally visual area. On the single 10-inch 33.3 rpm record, eight

pictures are discussed. These are "The Adoration of the Magi" (Fra Angelico and Fra Filippo Lippi), "Mona Lisa" (Leonardo da Vinci), "The Knight's Dream" (Raphael), "Hunters in the Snow" (Breugel), "The Angel and the Prophet Balaam" (Rembrandt), "Officer of the Chasseur of the Guard" (Gericault), "Road With Cypresses" (VanGogh) and "Three Musicians" (Picasso). In addition the recording includes both an introduction which states the purpose of the recording and emphasizes that each painting summarized is taken from a particular school of art, and is part of a quiz designed to test learning and to motivate further study.

*Let's Look at Great Paintings* (Ottenheimer CAB 4024; 4805 Nelson Ave., Baltimore 15, Maryland) has both school and home study implications. It is intended for younger children and the commentary is the work of Dora Jane Janson who co-authored *Story of Painting for Young People*. The complete album includes not only the recording but also color reproductions of the eight paintings discussed and a booklet with many other illustrations and visual material for use with the recorded quiz.

This unusual recording has two distinct classroom applications. It can, of course, be used in the middle and upper elementary grades for art appreciation instruction and as a device for motivating further art study. It can also be used in teacher training institutions as a device for indicating suitable means for instructing elementary children. In short, here is both a teaching material for elementary schools and a 'model lesson' for teacher training use.

*An Introduction to Ballet* (Ottenheimer CAB 4025), written and narrated by Katharine Sergava, has many parallel characteristics. It can be used effectively at home, with selected students in school and in teacher training in the physical education and dance areas. The well-illustrated book-

Some of the new records reviewed this month.

let accompanying the two records includes a simple statement in answer to the question "What is Ballet" in which Mme. Sergava states that ballet is an advanced form of games children play with their friends and of the feelings we all express in a variety of ways. The booklet also contains a history of ballet and illustrations of the five basic positions of ballet. The recording can be used effectively as suggested in elementary classrooms as a part of health and physical education instruction and may be used, too, in development of attitudes of appreciation of the ballet.

Elementary school students may enjoy hearing and then reacting to *Let's Put on a Play* (Ottenheimer CAB 4026) which is essentially a play-acting course for children written by Lydia Caplan. The recording consists of four skits acted by professional children. These include "Mother Goof's Nursery School," "Have Gum—Will Travel," "At the Railroad Station" and "Indian Talk." These are completely performed and it is anticipated that listening children will get helpful hints on acting. There are three skits, "The Visitors," "The 'Willow-Ware' Story" and "The Stranger," in which parts are deliberately omitted and the listening children are encour-

## DISCOVERING SOLIDS

A series of three films applying mathematics principles to space perception.

- I VOLUMES OF CUBES, PRISMS, AND CYLINDERS
- II VOLUMES OF PYRAMIDS, CONES, AND SPHERES
- III SURFACE AREAS OF SOLIDS

Art, animation, and model demonstrations help develop formulas for finding volumes and areas of solids. Live footage shows the use of these formulas in practical situations.

Carefully produced under the supervision of Dr. E. H. C. Hildebrandt of Northwestern University's Department of Mathematics, these films meet the demands of the revitalized mathematics curriculum.

Upcoming in the record field are a number of new language records. RCA Victor plans to release some records next month, and we hope to have more information for you soon. In the language field we are looking forward to seeing and hearing some new Ottenheimer releases, too. Their new titles will include *Gateway to Spanish*, *Gateway to French* and *Gateway to Russian*.

The Ottenheimer records will be edited by Dr. Frederick Eddy of the School of Languages and Linguistics, Foreign Service Institute, Georgetown University. This is not Dr. Eddy's first venture into editing phonograph records—he also edited the earlier H-R-S Language Courses for Children also published by Ottenheimer.

Folkways Records (117 West 46th

Street, New York 36) is offering a set of seven 12-inch 33.3 rpm records prepared by Morris L. Schreiber titled *College Entrance Exams English* (Folkways FI 9108). This is reported as being a comprehensive course in English including Vocabulary Building and Word Analysis, Narrative and Descriptive Writing, Word Relationships, How To Write an Effective Essay and Techniques in Reading Comprehension. The record is reportedly designed for high school seniors and juniors as an intensive review for college entrance examinations as well as for adults who wish to improve their cultural background and knowledge of the language. The publisher further suggests that teachers use the recordings in class to vitalize classroom instruction and that supervisors of English use the recordings for teacher-training.

Since the use of the language is a spoken and aural art primarily there is no more appropriate educational use of recordings than instructions in the proper use of words. We have brush and oils in art, acids and test tubes in chemistry; recordings in the English classroom are a fitting adjunct, to say the least.

## AUDIO-VISUAL INSTRUCTION

By JAMES W. BROWN and RICHARD B. LEWIS, both of San Jose State College; and FRED F. HARCLEROD, Alameda State College

554 Pages, \$7.95

This text on audiovisual methods provides concrete, practical information on the use of instructional materials to plan and carry out learning activities. Examples of use have been drawn from all subject fields, from kindergarten through college. It is the first audiovisual text to use an inventive and stimulating format in which profuse illustrations are correlated with the text. Emphasis throughout is on the principle that learning is most effective when materials are integrated with instruction. A-V Instructional Materials Manual, \$3.50. Teacher's Guide, Free.

# In the Church Field

by William S. Hockman

## Getting Feed Back

Too much church-talk is one-way communication. Being of that variety, there is some question about its being communication at all. Yet the church goes right on!

Or is it? In my Wednesday morning Bible class I am trying to get feedback from the group and am having considerable success. The best I have had was when I used one of the Methodist TV Talk Back films to point up a problem. Many adult Bible classes across the country could do likewise now and then on Sunday morning as a substitute for the endless droning of some one-way communicator.

Recently I previewed *The Secret* (guilt), *The Little Ball Bounces* (life's breaks, good and bad), and *And Gwendolin, Too*. In the last a mother identifies her compulsive thinking about her handicapped child as the will of God. This one will set any group of adults buzzing and kick up quite a bit of opinion-swapping even by youth (if they have good leadership).

The first can be used to get into feelings of guilt and what to do about it, but the leader will need to focus the film on this problem at the start. *Little Ball*, more amusing than the others, does probe gently the why-did-this-happen-to-me question, and a competent leader can certainly take it from there. At \$4.00 rental from your dealer; or the Methodist Pub. House, Nashville 3, they are bargains as discussion starters—what they are intended to be.

## Light on The South

When I showed the 29-minute color film *Face of the South* to a class of graduate students I heard responses like this: "Worth a whole graduate course in economics to me." "Just the thing for the men of my church. This will show and tell them what the South really is." "Did you ever see such a natural actor as that man Mit-

chell?" (. . . who narrates the film, and who, with his maps, charts, graphs and snatches of live photography, is the film). And, "I have heard the South and its problems discussed often and at great length but this film brought me more understanding in 29 minutes than all I have heard up to now."

Now I know it takes a good film to be that good. This film is that good. George Sinclair Mitchell is a walking and very vocal encyclopedia of knowledge on all phases of the South. He has a gift for lucid and interesting explanation. He captures his audience and holds it. He has given his life to the South, taking time out for a Ph.D. at Johns Hopkins University and for study at Oxford as a Rhodes scholar. Executive Director of the Southern Regional Council for the past ten years, this man of wisdom, acute economic insight, and contagious sense of humor, draws a portrait of the South which leaves you feeling hopeful rather than helpless. His basic contention is that as progress is made toward increased economic opportunity for minority people, so will there be progress toward the attainment of civil rights (for all). Availability: Try your AV dealer; after that the Broadcasting and Film Commission, NCC, 475 Riverside Dr., New York 27.

## When There's A Will

I watched them closely as I ran off the new 29-minute b&w film *Treasures In Heaven* at a private screening in my home. It really held their attention. And who were my guests? Three prominent attorneys, the pastor of a neighbor church, a housewife and prominent church woman, and a retired diplomat. I knew the lawyers would see the film from their professional perspective as would the minister and the others.

Now for the evaluation: They liked it. They thought it would encourage people to make wills and help Christians see the need for remembering

the church and its related institutions in their wills. They thought the acting was good and that the profession of the law was satisfactorily depicted. They found it informative as well as highly motivational. They could think of no one being able to say so much or say it half as effectively in 29 minutes. They did, to the last one, react negatively to the title—How did such a fine film ever get such a misleading title? (I really don't know and join them in wondering.)

On utilization they were enthusiastic about it being shown to all kinds of adult church groups, to service clubs, to fraternal orders, to the professional meetings of attorneys, bankers and ministers. And they wanted to know if there was literature to go with the film. There is, plus a user's guide. Get it from the stewardship department of your denomination, which will also be the source of the film unless it is available locally through local offices such as those of presbyteries, synods, conferences and such. From these sources the film may be available for a small service fee, an offering, or even free. From rental sources it will be \$9.00. It was produced by Family Films, Inc., Hollywood 39, for the Department of Stewardship and Benevolence of the National Council of Churches, with T. K. Thompson acting as technical advisor.

## If Interesting, Entertaining

The above could be a thesis, don't you think?

Take *Retrievers At Work*, which covers the training and performance of certain breeds of dogs. In my previous audience were three adults and two young people. We found it interesting and enjoyable. It entertained us. The same for *By Map and Compass*, which the Boy Scout and his father would surely find interesting, and I thought I might.

But what of the 'girls,' our wives, and the 10-year-old? Would they? They did; we all did. Orienteering was fascinating as explained and demonstrated via beautiful Canadian outdoors in fall. *Begone Dull Care* was on-film painting in fluid lines and jumpy blotches of color by Morman McLaren with a jazz musical background. It afforded us pleasure—entertained. *Poulette Grise*, lovely and expressionistic and filled with beautiful imagery of familiar objects that fade in and fade out on the screen with lullaby softness. Film poetry!

Need I say more? My point is proved: If interesting, entertaining! But too few church people are using these in the context of entertainment

# School Officials Make Modest Starts in Educational TV While Planning School District or College Campus Networks

The complete linkage of college classroom buildings or of schools in dispersed districts requires careful study of the physical layouts of these buildings. Also required is advanced planning for television transmission and reception in future school buildings. And equally important are the preparations for complete programming of ETV courses over a linking network.

Many schools are approaching the situation by making a modest beginning. Closed-circuit TV is used in available individual buildings preliminary to the installation of a linking TV network. This realistic approach is sound, and it furnishes a source of valuable information and experience for use as the ETV program expands.

Through this method a corps of experienced personnel will be developed. This includes the professional staff to coordinate the planning of programs and lessons; the trained technicians to conduct preventative maintenance necessary in keeping equipment in good operating condition.

A modest beginning in ETV also provides the opportunity for experimental and exploratory activity. These explorations may delve into the professional use of equipment for improving instruction in the subject areas of a school's curriculum. Further, the explorations may have to do with the physical aspects of the ETV system: the placement of receivers; proper lighting; acoustics; inter-communication and the location of transmitting equipment.

Another vital phase of planning for ETV concerns the selection of proper transmitting equipment. While the equipment should meet the needs for a beginning system, it should also have the facility for future expansion without obsoleting the original equipment. An ETV system that meets these and other requirements has been developed and is being marketed by the Dage Television Division, Thompson

Ramo Wooldridge, Inc., Michigan City, Indiana.

The Dage concept for Educational Television is based on the modular construction of equipment. It is possible to start with one camera, using the Dage Mobile ETS-1 system, and to add additional cameras without obsoleting the first one. The cameras and control units are housed in a

The Dage Mobile ETS-1 system is modular in construction . . . expansion won't obsolete original equipment.

mobile console so the "mobile" studio can actually be moved from one lesson origination point to another, or it can remain stationary in a studio location. The system further provides for the use of a film pick-up camera. This enables the schools to televise the many excellent educational motion pictures available to them.

While ETV systems should be carefully planned, schools and colleges need not wait for a linking network system. As outlined above, a small start is often the wisest course.

Many schools and colleges planning ETV systems have contacted Dage Television for assistance. As a pioneer in the field of ETV, Dage's engineering and installation experience is of proven value. For further information about Dage ETV systems, or for free consultation write to:

Dage Television Division,  
Thompson Ramo Wooldridge, Inc.  
2603 W. 10th St. Michigan City, Ind.

and fellowship. I've done it many times and you can, too. The resources are vast.

The running times on the above are respectively 11, 27, 9 and 6 minutes. They are available from many dealers and the International Film Bureau, 57 E. Jackson Blvd., Chicago 4, Ill.

## Religion Via Science

In its Science Adventure series the Moody Institute of Science uses some outstanding phenomena from the natural world to point up a spiritual truth. It seems that Uncle Bob, in his rather plush 'repair shop,' is called upon from time to time to settle disputes and answer questions for his junior-age neighbors. They bring him a bat and learn about the bat's radar navigation (and about God); and, two scrapping boys trigger a demonstration of the fact that no two snowflakes are the same and what this tells us about the God of creation and ourselves. All this is brought off in good color with fine little actors and interesting format. These 13-minute films can certainly be used to teach a great deal of religion via natural science if the wideness and depth of God's mercy is not reduced by the films' tendency to formulate and formalize. From your AV dealer, or from MIS, 11428 Santa Monica Blvd., Los Angeles 25.

## Skillfully Made

Any producer who undertakes a historical picture is in for trouble unless he has imagination and great technical skill, a combination not always easy to come by. Perhaps this is why the Presbyterians engaged a Paris concern to produce the 29-minute b&w film *For God's Glory* in connection with the John Calvin and Reformed Church jubilee year. It portrays, through the skillful utilization of still pictures of all kinds, Christianity from the Middle Ages through the years of the 19th century missionary expansion. It held my attention all the way, and it was a good film to the last frame! Available to Presbyterians through their presbytery and synod offices; others inquire of your denominational AV departments. Recommended; the most interesting history I have seen in some time!

## About Growing Up

Family Filmstrips, Inc., has produced a series entitled "Donny Stories: About Growing UP" with four titles: *Surprise*, a story about growing up where Donny plants a sunflower seed; *Something New*, a story showing how

Donny learned a wonderful secret about giving when his baby sister got some presents; *The Jolly-Bus*, how Donny's older brother made a jolly-bus that helped him understand how God's world depends on order; and *The Star*, what father said and did when Donny asked for a star.

The art, running about 22 frames per, is delightful and the commentary needs no adjusting to the kindergarten (four- and five-year-olds) because it is already there. Plenty of teaching can be enriched with these charming visual aids to your curriculum for this age level. Fine for church school, good for weekday kindergartens, they would be tops for vacation schools. Highly recommended when used (and this is important) as the guides suggest. Kit of four, complete with 2 7-inch LP records, \$19.50. From your AV dealer.

### Two FS For The Primary

In the words of the producer, Family Filmstrips, Inc., *Where Jesus Was Born* "is intended to be used with primary children (grades 1, 2, 3) to enrich and supplement curriculum units or lessons dealing with the life of Christ, particularly those sessions dealing with the birth and boyhood of Jesus." To do this we are given 23 frames of good clear color photography and a commentary of simple and meaningful sentences. The running time is 4 minutes.

The second in this little series, entitled "Where Jesus Lived," is *Where Jesus Worked*. A more accurate title might have been 'Where Jesus Traveled' for it shows the locale of incidents and teachings. In this and the above, the concepts are adjusted to the understanding of primary children. Both will help develop a sense of the reality of Jesus. One record accommodates both commentaries. Highly recommended. Both, complete, \$11.00; from your AV dealer.

### Growing Up For Tots

In the series "Molly Stories About Growing Up" we have a story teaching that change and growth is a part of God's plan (*The House Next Door*); about Molly sharing her sandpile with Donny (*Sandpile and Trike*); about how Molly still loved her old dollies when she got some new ones (*Molly's Dollies*); and how Molly learned what owning things means (*Molly's Blocks*). Recommended for church school, for nursery schools, and the public school kindergarten. Kit of four, complete, \$19.50. Produced by Family Filmstrips, Inc. From your AV dealer.

# NOW! add dynamic motion to any still transparency with AO's Do-It-Yourself TECHNAMATION®

**EASY**—Make liquids flow, gases explode, wheels turn, smoke billow . . . add movement and color to any static, black and white transparency. No special tools or skills are required. Simply cut self-adhering TECHNAMATION® material to shape with knife or scissors . . . apply to that portion of the transparency where motion is desired.

**AMAZING RESULTS**—Attach a motorized polarizing spinner (also available from AO) to your overhead projector to activate TECHNAMATION material. The still transparency takes on new drama . . . new dimension . . . new interest. The most complex mechanism, diagram, illustration or chart becomes easier to understand . . . easier to remember.

AO's New TECHNAMATION Materials Kit and the motorized spinner are all you need. Add vibration, speed, radiation, flow, turbulence . . . many other movement forms and color to any still transparency. Write today for full information on this most effective classroom teaching aid.

# New Equipment and Materials

For addresses of the sources supplying information on which these listings are based, refer to Directory of Sources, page 154. For more information about any of the equipment announced here, use the enclosed reader service postcard.

## NEW EQUIPMENT

### CAMERAS: Movie, TV

**Four 8mm Zooms.** Push button automatically glides field from wide-angle to telephoto or reverse; viewfinder image changes with lens; electric eye exposure control; self-setting footage indicator. Four models, from \$179.50. **WOLLENSAK**

For more information circle No. 101 on return postal card.

**Zoomatic 8mm movie camera** permits transition from long shot to closeup without changing lenses; shifts from normal to slow motion while camera is in operation. The speed shift features also the 3-lens turret model. "Varamat" zoom lens f/1.8. Either camera \$199.95, case \$24.95. **B&H**

**Bell & Howell Zoomatic**

For more information circle No. 102 on return postal card.

### CAMERAS: Still

**View Camera—35mm** with the versatility of an 8x10 studio job. Especially suitable for macro- and microphotography. Full frame ground glass viewing, magnifier focus, rotating back; interchangeable magazines removed when replaced by a focusing hood containing ground glass and adjustable magnifier. Standard equipment includes Dallmeyer 4" f/4.5 lens in Compur shutter 1 to 1/500th sec. Other lenses available. **FAIRCHILD**

For more information circle No. 103 on return postal card.

### CAMERAS: Accessories

**Eastman Ektachrome ER Film** is now the name of the recently introduced "Eastman Color Reversal SO 260-270." Your choice of "Daylight" or Type B.

See local dealer.

## PROJECTORS: Still

**Delineascope Model 1000** has 1000-watt lamp, 10"x10" projection aperture, with 18" (5" diam.) high-speed lens \$314; with 22" (4 3/8" diam.) lens \$294. Built-in optical pointer, roll feed attachment. Carrying case \$45; dust cover \$9.75. **AMERICAN OPTICAL**

For more information circle No. 105 on return postal card.

**"Miniature" Filmstrip Projector Model 333;** new type 150-watt lamp; cast aluminum housing; heavy duty fan; 3" f/3 slip-screw lens; 6 1/2" high, 7 1/2"x5", wt. 5 lb. \$39.95 (3 for \$100). **STANPROJ**

For more information circle No. 106 on return postal card.

**"Synchro-Mat,"** combination slide-film-strip projector and tape recorder, for instant do-it-yourself preparation of fully automatic presentations. Completely transistorized. Record and playback model \$350. **DONNLU**

For more information circle No. 107 on return postal card.

**Tutor I—automatic sound tape filmstrip projector;** narration on one channel, electronic advance signal on the other; tape cartridge for repetitive showing. **Tutor II,** same, with tape on reels. 3 3/4 ips standard, 7 1/2 available. 300-watt light output. 28 lb. 3" f/3 projection lens. \$295. **LABELLE**

For more information circle No. 108 on return postal card.

## SOUND EQUIPMENT AND ACCESSORIES

**AM/FM Stereo tuner, preamp, amplifier.** Madison Fielding Series 440, by Crosby Electronics, combines tuners on same chassis with 40-watt stereo preamp, amplifier. Six program sources may be mixed on each channel by push-button selectors. \$325. **BRANDPROJ**

For more information circle No. 109 on return postal card.

**Colored reels for tape recorders,** polished, transparent plastic, red, blue, green, yellow. **MMM**

For more information circle No. 110 on return postal card.

**"Multiplex" audio-communicator.** Four recorder-playbacks, console mounted, feed 30 student headphones through selector panel with individual switches, monitor unit, plastic ducting, microphone, \$1,395. Two recorder-

playback unit \$510; single \$340. Dual-channel tape recorder lang-lab student unit installations start at \$495. **MECOTAPE**

For more information circle No. 111 on return postal card.

**"Stereomaster" Model 339;** combines 40-watt stereo amplifier Model 299 with AM-FM stereo tuner 330D. Readily built into furniture or consoles; connects to standard speakers, phono. \$399.95. **SCOTT**

For more information circle No. 112 on return postal card.

**Tenzar-Backed Tape 311.** Reportedly twice as strong as acetate, 15x greater tear resistance. Non-drying, free-running; recommended for classroom, lang-lab, church, duplication, business use. End-of-reel tape clip included; 600 and 1200' reels. **MMM**

For more information circle No. 113 on return postal card.

## MISCELLANEOUS ITEMS

**Secondary Time Standard** synchronizes electronically with U.S. Bureau of Standards signals to activate any timing interval device with complete accuracy, from 15 seconds to 1 hour spacing. 7" wide, 7" deep, 11" high, wt. 9 lb. The 3-band radio is powered by two 6-volt and one 1 1/2-volt battery. Priced at "under \$1,000." **ZENITH**

**Zenith Portable Time Standard**

For more information circle No. 114 on return postal card.

**Flannaroll** spring- or hand-rolled, from \$15 (24x26"). Also **Flannaboard,** gray or black flannel-covered Masonite, (24x36") \$5; (36x48") \$7.50. Flocked cutouts for number, language and music teaching. **WEDBERG**

For more information circle No. 115 on return postal card.

**EVERYTHING IN ELECTRONICS  
FREE ALLIED 1960 CATALOG**

Recording equipment, Stereo, Hi-Fi audio, school sound systems, training kits, electronic parts. Write for value-packed Catalog.

**ALLIED RADIO**

100 N. Western Ave., Chicago 80, Ill.

**← TWO WAY →  
POWER DRIVEN FILM REWIND**

Double your film inspection with less effort! Modernize with the proven motor-driven FOSTER REWIND—winds both to the left and right under motor power. Easy to use foot pedal controls both direction and speed of reels (up to 875 rpm). Both hands free for inspection and quick splicing. Capacity to 2000 foot reels. Heavy duty motor—simple design—and rugged construction assure maintenance free operation. Rewinds 16mm—35mm—8mm motion picture film.

Write for details and Special Trial Plans.

*International Film Bureau Inc.*

57 E. Jackson Blvd. Chicago 4, Ill.

**Kinetic Theory Apparatus.** Eighth-inch plastic balls simulate molecules to demonstrate fundamental principles of gas mechanics. College physics experiments re Boyles' Law, Van der Waals' Corrections, Avogadro's Law. CENCO

For more information circle No. 116 on return postal card.

**Malfunction Simulator** sets up any desired combination of 36 different types of field service troubles in educational type TV equipment, which students learn to recognize and correct. DIPOWER

For more information circle No. 117 on return postal card.

**Microfilm Indexing Kit**—Includes flash cards, targets, and other forms for location wanted frames. \$7.50. RECORDAK Branches.

For more information circle No. 118 on return postal card.

**Microfilm Splicer** is specifically designed to non-perforated 16mm microfilm. Operator does not touch face of film. RECORDAK

For more information circle No. 119 on return postal card.

**Phrase-O-Scope** reading rate accelerator with 24 slides and "Reading Rater" tester \$12.50, 40 additional slides for grade school level add'l. \$1. BETREAD

For more information circle No. 120 on return postal card.

**Solid Tak** plastic adhesive, reusable, unaffected by water or temperature. Will not damage walls, blackboard; holds model etc. parts in place, supports display parts on vertical mounts up to 1 lb. DELKOTE

For more information circle No. 121 on return postal card.

## INSTRUCTIONAL MATERIALS

An Introduction for Teachers

LOUIS SHORES

Florida State University

Just published! This unique guide discusses all major types and subtypes of instructional materials—the whole range of media through which teacher and pupil communicate to advance learning. For each type of instructional material there is a definition, history, list of sources, examples and suggestions for use, etc. After an introduction to the organization of a materials center, the book devotes separate chapters to each major class of materials. It concludes with details of materials center management. 1960. 70 ills.; 462 pp. \$6.50

## AUDIO-VISUAL PROCEDURES IN TEACHING

LESTER B. SANDS

Santa Barbara College  
University of California

An exhaustive survey of audio-visual materials and procedures for every level of education. Each type of audio-visual aid is discussed in a separate chapter, with a full analysis of its uses, possibilities, and limitations. Book relates each kind of instrument and procedure to the whole teaching process with practical examples and illustrations. Includes laboratory exercises and lists of source materials. 1956. 271 ills., tables; 670 pp. \$6.75

THE RONALD PRESS COMPANY

a reel triumph

# ANNOUNCING A NEW "SCOTCH" BRAND MAGNETIC TAPE WITH EXCLUSIVE TENZAR BACKING

designed for heavy duty use,  
high quality performance

**N**OW YOU NEED WORRY NO LONGER about fraying, breaking, varying tension and other problems that go with heavy tape use. "SCOTCH" BRAND Magnetic Tape No. 311 is *extra tough*—designed for really heavy service in recording and playback applications requiring frequent repeat, continuous play and constant handling.

*It's tear-resistant*—withstands severe usage and handling, won't pop or tear if edges become nicked or scratched.

*It's stretch-resistant*—fast starts, stops or varying drive tension won't distort or curl the rugged backing.

*It's non-drying*—won't become brittle in hot, dry storage. Will not absorb moisture, perfect for all weather use and long time storage.

Add to this, exclusive Silicone Lubrication, impregnated throughout the entire coating, to assure the most effective, lasting protection available for your recorder heads. Plus the finest of uniform, high

potency oxides for the perfect sound reproduction quality that has made "SCOTCH" BRAND famous.

Packed with every reel of No. 311 is a unique new end-of-reel Tape Clip that holds tape securely, prevents spilling or tangling in handling, storage and shipment. *Colored reels are available, too, in four transparent colors: Red, Blue, Green, Yellow.*

The price? "SCOTCH" BRAND No. 311, with its professional quality and exclusive new TENZAR backing, *is priced in the same range as standard acetate-backed tapes!*

And, remember—TENZAR backing is an exclusive development of the 3M Company, whose research pioneered in audible range tapes, as well as video and instrumentation tapes.

See or call your supplier now for "SCOTCH" BRAND Magnetic Tape No. 311 with new TENZAR backing. Standard play, 600 and 1200 foot reels.

MINNESOTA MINING AND MANUFACTURING COMPANY  
... WHERE RESEARCH IS THE KEY TO TOMORROW

"SCOTCH" and the Plaid Design are Registered Trademarks of 3M Co., St. Paul 5, Minn. Export: 99 Park Ave., New York. Canada: London, Ontario. © 1960 3M Co.

**PHILCO  
CLOSED-CIRCUIT TV  
brings new flexibility  
to teaching**

Philco, pioneer in fully-transistorized closed-circuit television, offers completely integrated instructional TV systems for schools and hospitals. Philco systems provide the ultimate in flexibility, incorporating any number of cameras, monitors, receivers and amplifiers, interconnected through a central console or a "patch panel" . . . with provisions for two-way conversations. Philco equipment is reliable, easy to operate and low in cost. Philco will help you design a system to meet your requirements. Write for information and your Philco Closed-Circuit TV Planning Guide.

NORMAN SINGER, *Dean of the ASPEN SCHOOL OF MUSIC and Director of the ASPEN MUSIC FESTIVAL in Colorado*, uses his NORELCO 'Continental' to play a tape by a young pianist who has applied for admission to the celebrated summer school. "The NORELCO 'Continental' is our choice because the prime requisites for a tape recorder at Aspen are ruggedness, versatility and high fidelity," states MR. SINGER. "A first-rate tape recorder like the 'Continental' is an essential item for an active music school. By studying the tapes, students learn to criticize constructively their own compositions as well as their own instrumental and vocal performances." The NORELCO 'Continental' is a product of North American Philips Co., Inc., High Fidelity Products Division, Dept. 1S10, 230 Duffy Ave., Hicksville, L. I., New York.

DA-LITE SCREEN COMPANY

**FINAL SUCCESS OF FILMED  
PRESENTATION DEPENDS ON  
QUALITY OF PROJECTION SCREEN**

Good filming, careful projection—yet the picture lacks clarity and colors are weak! This is a case of projecting on an improper surface. Da-Lite engineers have developed a screen surface that protects the audio-visual professional from such a problem. The famous White Magic glass-beaded surface is unequalled in quality. Gives outstanding clarity of picture and faithful reproduction of color. You can seat your audience over a wider area with this new surface, too. For details on screen surfaces available and their application, write Engineering Department, Da-Lite Screen Company, Inc.

**NEW! ELECTRICALLY-OPERATED  
SCREEN FOR AUDITORIUMS**

The exclusive Da-Lite Electrol<sup>®</sup>, is electrically-operated . . . disappears completely when not in use, reappears in seconds at touch of control button.

May be installed in a concealed position—or mounted on wall and finished to match!

## 8mm Sound-on-Film by Fairchild

The Fairchild Camera and Instrument Corporation, long one of the biggest names among suppliers of photographic and instrumentation equipment for the armed forces, now enters the consumer market with an 8mm sound-on-film camera and projector.

The Fairchild "Cinephonic Eight" camera weighs about 4½ pounds and is completely self-contained, with an integral hermetically sealed nickel cadmium battery as a power source, rechargeable from any house lighting socket. The sound is recorded on Ansco-made color film bearing a 25 mil magnetic stripe. The striped film costs \$7.50 (not including processing) for a 50-foot roll of double 8, twice the length of the conventional 8mm roll. Black-and-white striped film is promised, and existing silent 8mm film will be striped to order so that silent 8mm can be sounded in the companion Fairchild 8mm sound-on-film projector. The color film speed is rated ASA 12 Tungsten, and (with 85-B filter) ASA 10 Daylight.

The camera mounts a 3-lens turret. Standard equipment is a 13mm f/1.8 fixed focus Cinphar lens. Other lenses now available are the 38mm f/1.8 telephoto and the 8.5mm f/1.8 wide angle; both fixed focus; each priced \$39.95. The camera price is \$239.50.

Basic equipment includes the built-in recording unit, earphone monitoring system, low impedance dynamic microphone and stand, lavalier neckband, rechargeable battery and recharge cord. A direct-reading exposure meter (\$18.75) fits one of the turret openings on the camera.

The projector (\$249.50) has built-in sound amplifier, recording and erase head, separately housed (6-in., 8-ohm) speaker unit and microphone. Sound can be recorded and played back at either 16 or 24 speed. Its volume is reportedly "sufficient to comfortably fill

Sherman Fairchild examines his camera.

a large classroom." The pre-focused 150-watt "True-Flector" lamp reportedly "casts a beam equivalent to 750 watts on the screen." The projector not only records and plays back, but is designed to "overlay" sound on previous recording without erasing the original track where this is desired.

The market primarily visualized by Fairchild's merchandising experts is the "25 to 40-year-old married male with a college education, one or more small children, earning over \$10,000 as an executive or professional man . . . (and as gifts) parents of talented college students and newlyweds." But Charles E. Cherry, Jr., marketing manager, when introducing the new product, "suggested also that teachers, salesmen, and scientists will adopt this audiovisual tool because of its low cost."

Assuming that voice and major sound effect recording and reproduction is adequate for medium-sized groups, there is every reason to anticipate that conveni-

ence, as well as cost, will create a sizable educational, religious and commercial demand for this new member of the AV family.

## UWF Continues Government Service

The annual contract for printing and distributing more than 4,000 U.S. government films and filmstrips once more goes to United World—which has performed this service without a break ever since 1941. While most of this material was created originally for specific government purposes, a large portion has been found highly useful for classroom and personnel training use. Free catalogs are available from UWF Government Department.

## Automatic Threading

Revere announces its new automatic threading 8mm projector, 750-watt, 15-25mm "zoom" lens, \$147.50. Now where's that self-threading 16mm sound-on-film projector?

## Multiple Prints for Easter Peak

To help religious film libraries meet the annual peak demand for Lenten seasonal subjects, Family Films offers extra prints, sometimes used, at reduced cost, with three years to pay. Promotional materials packaged for the use of the individual church are also available. "Power of the Resurrection" is the current seasonal leader. An older film, "The Road Back," also carries a special Easter message. Biblical films are also in top demand at this season.

## List of Pre-Recorded Tapes

Hats off to Ampex, whose subsidiary, United Stereo Tapes, publishes and keeps current a composite roster of pre-recorded stereo tapes ranging the whole gamut of music from classics to boogie. Current list offers over 350 titles, from 29 sources, at prices ranging from \$3.95 to \$11.95.

## College Tests Go Audio

Pathscope Educational Films advises that the College Entrance Examination Board will provide foreign language listening comprehension tests beginning March, 1960, for high schools wishing to use them.

## 8mm With Superimposed Titles

United Artists Associated claims second place in the 8mm entertainment film market, with distribution through 2000 of the industry's 6000 retail outlets. Titles are superimposed over picture footage instead of insert cards as in the old silent film days. The UAA library includes Warner's, RKO's and other releases.

## Gospel Films' 10th Anniversary

Gospel Films, Muskegon, Michigan, marks "Ten Years of Ministry" with an 8-page illustrated catalog of its films and filmstrips, including a number of National Evangelical Film Foundation award winners. Since 1955 Gospel Films

New Fairchild sound movie projector

has been closely associated with Youth for Christ International and some of its films are made available without charge for high-school showing during school hours.

## Dates for Industrial A-V Meet

Herb Rosen advises that new dates for the 4th Annual Industrial Film and A-V Exhibition are set at October 10 through 13, in order to avoid clash with travel time from the Cologne, Germany, Photokino. This two-week postponement became advisable because the dates of the big international fair were changed. For further information, write Industrial Exhibitions, Inc., 17 E. 45th St., New York 17, N. Y.

## Beseler Serves ETV

The Beseler Vu-Graph is used for both front and rear projection by Milwaukee's non-commercial educational station WMVS in the presentation of low-budget educational programs. The acetate roll carrying pre-drawn visuals and the flat plate from which cut-outs and ad lib drawings are projected provide economical and effective visualization.

Beseler Vu-Graph Overhead Projector

## 650,000 Tape Recorders in 1959

The Magnetic Recording Industry Association reports that 650,000 tape recorders, valued at \$140,000,000, were produced in 1959. Forecast for 1960 is another 750,000 machines, valued at \$170,000,000.

## People

Leonard Sims has been named director of sales promotion by Sam Hersh, president of Family Films. Sims is a former U.S. Navy photography C.P.O. and an active Sunday School superintendent. Leonard Skibitzke, his predecessor in the Family Films' post, has moved up to assistant sales manager for the company.

Lt. Col. Christian S. Bauer has been appointed chief of the Photographic Division, Headquarters, Air Photographic and Charting Service, Orlando, Florida. Col. Bauer, a career officer of 17 years service, spent several years in advertising-photography before entering the service.

L. Byron Cherry has become general manager of the Ozalid Division of General Aniline and Film Corporation, succeeding Walter A. Hensel, retired. Mr. Cherry has previously held high executive posts with Cinerama, Inc., General Electric and CBS.

# THE QUALITY OF LEADERSHIP

No. 3 in a series of messages for all concerned with better education

## The World is Our Stage

Regularly, for more than twenty years, Coronet Films has sent skilled camera crews throughout the world whenever the subject of an educational motion picture requires authentic film footage.

This long term program of "shooting on location" has contributed to Coronet's unparalleled reputation for accurate, rich-in-content films . . . and created in them the special quality of *authenticity* so essential to capturing interest and converting it to enthusiasm for more learning.

Films on geography, history, world literature, foreign languages, art and music appreciation are among the regular assignments being performed by camera crews in the more than 60 countries shown . . . some located permanently, others on regular shooting schedules. Every continent except Antarctica has been at least temporarily "home" for a Coronet camera crew.

The authentic, "on location" scenes in more than 150 Coronet films bring students closer to their subject matter than do other teaching aids—another important element that gives to Coronet Films its quality of leadership.

*This booklet is yours! Send for it today!  
It tells the complete story of Coronet creative  
quality in its library of more than 900 educa-  
tional films.*

# HOW TO TEACH MORE EFFECTIVELY WITH AN OVERHEAD TRANSPARENCY PROJECTOR

*An important visual aids primer -- clip and save it*

As a person who uses and is often called upon to advise in the selection of visual aids equipment, it is essential that you become familiar with the many advantages of overhead projection techniques—how it can make your teaching even more effective, how it helps the student to grasp and to retain ideas, how it increases the scope of your subject matter.

For many teachers the prime advantage of the overhead transparency projector is the fact that it is the only type of projection equipment that is designed to be operated in broad daylight. The ordinary classroom becomes a theater without turning out the lights or drawing the shades. Of course, you must have a projector that provides the maximum screen light required to retain detail and color. Projection Optics' Transpaque Jr., for instance, provides up to three times more light on the screen than any other projector of its type. Transpaque Jr.'s exclusive optical system has completely eliminated a serious overhead projection problem — the distracting rings that have always appeared on the screen.

## Up-Front Projection

With this teaching tool, both you and the projector are at the head of the class. As you teach, you face your students. You can gauge their reactions, spot questions immediately; students can take notes and you can refer to yours. Remember, the lights are on! In short, with the Transpaque Jr. you retain all the advantages of a classroom environment.

The very small profile of Transpaque Jr., especially the projection

head, makes every seat usable. There is nothing obstructing your view of the class. Every student is able to see both you and the screen. The more compact Transpaque Jr. is also easily portable.

Superimpose transparency over transparency, building a progressive story before the eyes of your class. Transpaque Jr. retains the brilliance

and color even through multi-colored overlays. Each transparency has a large 10" x 10" format. You can tailor-make them yourself, simply and inexpensively. You can buy them already prepared, covering a multitude of subjects.

## Write As You Speak

To create large screen images of your notes or ideas, just write in your normal size script on a transparency. It is projected as you write,

just behind you on the screen. You can draw lines, write clarifying remarks, circle areas of special interest. Your individual technique is as unlimited as your own imagination. There is no squeaky chalk or tiresome blackboard work. Use the roll of transparent film. Write on it and roll it away for a continuous supply of clean writing surface.

Transpaque Jr. is UL-CSA approved. It is easy to operate and trouble-free. For a free demonstration or additional information write to

## Audiences To Contribute at EFLA Film Festival

EFLA's second annual American Film Festival, convening April 20-23 in New York City, will feature not only 250 of the best and most interesting 16mm films and filmstrips recently released, but also 34 of the best and most interesting audiences ever assembled. Immediately after the blue ribbon juries have marked their ballots at the end of each of the 34 competitive screenings on the festival schedule, the audiences will take over in wide-open discussions with producers, distributors, film program directors and subject-area specialists.

A highlight of the 1960 festival is an evening symposium at which EFLA will invite festival registrants to "Meet the Film-Makers"—a group of first rank producers, including some of last year's Blue Ribbon winners, who have done work of particular distinction in the AV field. These film-makers will lead a formal discussion on 16mm film and filmstrip projects, problems and prospects and have also consented to meet the guests in informal parleys at this and other festival sessions.

Persons attending the Festival will have an unparalleled opportunity, it is said, to see many carefully selected films and filmstrips in every area, from such festival competition categories as "Science—History, Background, and Incentive" to "Film As Art"; "Public Relations—Adult, Community, or National Non-Profit Organizations"; "Safety and First Aid"; or the religious films on "Doctrinal and Denominational Subjects"—all notable for especially large numbers of entries submitted this year.

Applications for festival jury assignments, details of the program and other information on the festival may

The Blue Ribbon award trophy of the American Film Festival.

be obtained from EFLA, 250 West 57th Street, New York 19, N. Y.

## AUDIO-VISUAL INSTRUCTION

By JAMES W. BROWN and RICHARD B. LEWIS, both of San Jose State College; and FRED F. HARCLEROD, Alameda State College

554 Pages, \$7.95

This text on audiovisual methods provides concrete, practical information on the use of instructional materials to plan and carry out learning activities. Examples of use have been drawn from all subject fields, from kindergarten through college. It is the first audiovisual text to use an inventive and stimulating format in which profuse illustrations are correlated with the text. Emphasis throughout is on the principle that learning is most effective when materials are integrated with instruction. A-V Instructional Materials Manual, \$3.50. Teacher's Guide, Free.

# Specify AMPEX 351

## ... FOR HIGH QUALITY AND LASTING ECONOMY

It is a recorder that meets the most exacting sound-quality requirements. And because the Ampex's long, trouble-free life means true economy, it is one of the best equipment investments your school or district can make.

One Ampex 351 can do all the high quality recording jobs for the school: original teaching tapes, language master tapes, recordings for speech evaluation and correction, rehearsal assistance for band and orchestra, and any tapes that will be duplicated for distribution to other schools.

Inevitably the Ampex also becomes the school's one heavy-duty "workhorse" giving far more hours of service than any of the school's other recorders. Why? Because the Ampex can give continuous year-round service with minimum maintenance.

These are the same qualities that have firmly established the Ampex 351 as first choice of broadcasters and professional recording studios — and of knowledgeable educators interested in producing tape masters to high standards.

*The use of professional recorders in education has been documented in a new brochure which this coupon below makes available to you.*

# DAVI Convention Draws Cheers

More than 2,500 (the figure is unofficial at the time of this writing) audiovisual teachers and specialists gathered in Cincinnati from February 9 to March 4 at the annual convention of the Department of Audiovisual Instruction, NEA.

This crowd, which jammed hotel corridors and swelled the hearts of DAVI officials, listened in on discussions ranging from use of the new teaching machines to the status of AV equipment in international education. And they ranged through exhibits and displays acknowledged almost unanimously as the "best ever."

Opening the first general session on March 1, Dr. Ernest O. Melby, professor of education, Michigan State University, delivered the keynote address, "Focus on Vision," in which he scanned the educational system of the future and posed some questions for delegates to puzzle over in follow-up discussion sessions.

Teaching machines, one of the current controversial issues in education, was the subject of a session conducted by Dr. A. A. Lumsdaine, program director, training and education, American Institute for Research, in Pittsburgh, Pa.

Other sessions covered language labs, the National Defense Act of 1958, teacher education, school building design, production and research. Other general session speakers include such top-ranking educators as Dr. John E. Ivey, president of Learning Resources Institute, New York City, who alerted delegates to the progress and trends in communication, particularly that of television and its implications

Top DAVI officers, from left: Walter S. Bell, immediate past president; Dr. James D. Finn, president; Dr. Ernest Tiemann, president-elect; Clyde K. Miller, vice president.

for the educational field, and Dr. Edgar Dale, professor of education at Ohio State University, who gave delegates a broad view of the international picture in "Avenues of International Cooperation of the New Educational Media Field."

## Finn Named to Head DAVI

2310 EAST DOUGLAS WICHITA, KANSAS

## Demonstration of Teaching Methods Facilitated by Closed-Circuit TV

Educators are well acquainted with the methods of instructing student teachers: actual visitation to elementary classrooms and observation of model classrooms from balconies equipped with one-way glass partitions. While both methods have advantages, there are also certain limitations or objections to each. Classroom visitations are distracting to elementary pupils and their teachers. Model classrooms with mezzanine observation points are very costly to construct, and also limit the area for observation.

Many colleges of teacher education are overcoming the basic problems of classroom observation through the use of Dage television systems. While the physical layout of educational buildings will determine to some extent the type of equipment and system to be used, the one as diagrammed above is symbolic.

Dage cameras cover the entire classroom area. Each of the cameras can be remotely controlled from the

observation room. In this room student teachers and their instructor observe the demonstration teaching on television receivers. Thus observation and interpretative discussion can go on without distracting classroom procedures.

As a pioneer in the field of ETV, Dage Television has worked closely with educators to develop a wide range of systems and equipment for educational purposes. The teacher training system is but one example. Each institutional requirement is treated as a special installation with the equipment system being customized to meet local need.

When considering your requirements for closed-circuit ETV, request the consultation of a Dage representative. He is well qualified to discuss and advise on all phases of ETV. Write for complete information about Dage television cameras and systems for every educational purpose. No obligation, of course.

Export Representative — Rocke International Corp., 13 E. 40th St., New York 16, New York

Screen and Audiovisual Guide, D. Finn presents some of his thoughts on American education and the role DAVI will play in it.

"The audiovisual field today is effervescent, changing, growing, evolving, and is moving into what is, without doubt, its 'golden decade'. Instructional technology—the use of communication devices and materials of all kinds such as television, teaching machines, films, tapes—and language laboratories will be used increasingly to improve the quality of instruction in American education and to make the teacher a true professional.

"In a sense, the old cry from World War II, 'give us the tools and we will do the job!' is being answered for the first time in American education. In the next ten years inventions, improvements upon older devices and whole instructional systems will be made available to the teaching profession in quantity and quality never before dreamed of. With these devices will go new materials of all kinds.

"The role of DAVI is clear in this coming decade. We must exercise great leadership in order to insure that these materials and devices will be used properly to further the education of human beings by human teachers."

# Camera Notes at the Convention

"Will you regard this convention as time well spent?"

*Joe Eubanks, supervisor, Laurens County Schools, Dublin, Ga.:*

Yes, it's wonderful. This is my first one, and I certainly haven't seen any bad features. I like especially the exchange of ideas, meeting fellow AV people, and the fine display of equipment and materials.

*Eleanor Kalman, examiner, Cincinnati School Board:*

It seems to be doing what it's designed to do—get the people to meet each other, spread new ideas, hear authorities on various topics, and show new equipment. I've just finished an AV course at the University of Cincinnati, and I think all this equipment is fascinating.

*Carlyle Frederick, audiovisual coordinator, Nappanee High School, Nappanee, Ind.:*

I'm impressed, and I'm taking a lot of ideas home. But I'm disturbed about one thing: there is not enough interest shown in the actual audiovisual classroom problems of the small school. There is much time given to high level administrative discussions, but I think DAVI could profit by getting down to the grass roots more than they are doing.

*Ed Minor, instructor, Florida A&M University, Tallahassee:*

I used to teach graphic arts at Indiana University and feel especially close to the progress being made in equipment. The convention talks and exhibits continue to get better, and I have taken a lot of worthwhile notes in the things I've seen and heard.

*E. B. Nowicki, (r.), head of audiovisual training, and Robert R. Pomeroy, both of the U. S. Navy training device center, Port Washington, N. Y.:*

There is a lot new here in the exhibits that are being shown, especially in teaching machines. The meetings have been good. These, plus the contacts we make, give us a chance to see what the other service training areas are using in the way of techniques, budgets, and so forth.

## reel TRIUMPHS

**TLC . . .** Tender, loving care from a tape recorder? It isn't unheard of. One boy approached learning with fear and hesitation because the idea had been drummed into him that his oral reading was poor. A school social worker, realizing that his reading was not really deficient, had him record a story. When he heard it played back, he gained some of the reassurance that comes from warm, gentle guidance.

**CROWD . . .** Teachers with overloaded classes have solved some of their problems with a two-platoon system involving tape recorders. They record questions for a quiz or routine instruction and play the tape for one section of the class while giving close attention to another section.

**TOUGH JOB . . .** Few jobs in education are "easy," and tapes used for instruction must be as durable as the teachers who use them. New "SCOTCH" BRAND No. 311 Tape with TENZAR backing is extra-tough. It's designed to withstand abuse resulting from constant handling—can be erased and re-recorded time and again on any kind of recorder.

**BLANK . . .** Lower grade teachers can ease their fear of pupils forgetting lines in plays and assemblies by using tape. The children pre-record the lines, which are played on the PA system during the performance. Pupils simply act out their roles, mouthing the words.

**FREE . . .** 99 Tape Recording Terms, an interesting, descriptive booklet, is yours free by writing Magnetic Products Division, Dept. MCG-40, 3M Company, 900 Bush Ave., St. Paul 6, Minn.

"SCOTCH" BRAND  
MAGNETIC TAPES

MINNESOTA MINING AND MANUFACTURING COMPANY  
... WHERE RESEARCH IS THE KEY TO TOMORROW

"SCOTCH" is a registered trademark of the 3M Co., St. Paul 6, Minn.

# Visual Without Audio

*Paul C. Reed*

The April issue of *Educational Screen and Audiovisual Guide* traditionally gives special emphasis to the "audio" in "audiovisual." On a recent school holiday, while thinking about this, we thumbed through the pages of Volume XIV. That was 1935's volume and there was no "audio" in the title. It was "Education Screen combine with Visual Instruction News."

Ellsworth Dent, secretary of The Department of Visual Instruction of the N. E. A. reported that the winter conference in Atlantic City had been "small but fruitful."

A news note headlined that a "Pennsylvania High School Successfully Uses Talking Pictures."

Most every month Erpi Picture Consultants announced new talking pictures. Over a hundred films in nine categories had been produced.

Eastman Kodak Company announced over 200 silent films from their Teaching Films division.

In an article on "Trends in Visual-Sensory Instruction," F. Dean McClusky saw the most pressing issue as "whether or not money for equipment should be invested in silent or sound projectors." He perceived "the development of a critical attitude among school people toward the quality of visual aids," and a concern among teachers that "robot instruction will supplant the person of the teacher."

RCA announced the first amateur sound camera.

Victor Animatograph celebrated its 25th anniversary.

SVE sold its "latest improved Model D Picturol Projector for \$38.50 complete with carrying case."

The discovery of the Eastman Kodachrome process for color movies was heralded editorially.

Edgar Dale, in discussing a plan for a proposed American Film Institute, believed that "the motion picture and allied visual and sensory aids have a vast unrealized contribution to make to American education."

Dunn and Schneider reported in detail on the visual materials centers in states.

One speaker at the winter meeting spoke on "The Use of Visual and Aural Aids in the Teaching of Literature in the High School."

A teacher wrote, "Since the coming of sound and talking pictures in the theaters, the novelty of motion pictures in the classroom has worn off rapidly."

A brief note told about "a pioneer demonstration in visual-radio instruction in art" in Philadelphia. Still pictures were projected in classrooms in synchronization with a radio program.

That was 1935, and two things strike us from this excursion back to the visual instruction world of 25 years ago. First. What causes the tremendous lag? Why have we made so little progress? Practically all we know and say about visual instruction was said years ago.

Second. Where was the term "audio" 25 years ago? You don't find "audio" or "audiovisual" anywhere in the 308 pages of Volume XIV. The audio components are there. Sound pictures, radio, television, everything but tape recording. But audio had not yet been tied verbally to visual. Maybe that's what was holding things back!

Next time there's a coincident of a school holiday and a reminiscent mood, we'll have to try to find when "audio" first appeared in the pages of *Educational Screen*. Or can someone tell us?

**Kodak**  
TRADE MARK

*At the new Kaibab Elementary School, Scottsdale, Arizona, selected by A.A.S.A. for its exhibit of outstanding school designs, Mr. Marvin Osborn, Audio-Visual Director says:*

**“In operation 75% of the school day, these Kodak Pageant Projectors just keep running...without fail!”**

“Once-a-year checkups seem to be all they need to keep them operating the way we like, with no breakdowns, no disruptions of classroom order.

“Projection Club, 6th, 7th and 8th grade students handle showings. They catch on fast to the Pageant’s simple operation.”

Stresses on audio-visual equipment are extraordinary, even in normal use. Constant usage, hard usage, and usage by many different people mean that projection equipment must be built specifically for Audio-

Visual work, if it is to endure.

That’s the way we have constructed Kodak Pageant Projectors. First, to be sturdy . . . with quality sound and screen image for all types of A-V usage. Then, to be simply operated . . . even by children. Finally, to be easily maintained . . . with only occasional checkup.

*Kodak Pageant Projectors are sold through Kodak Audio-Visual dealers, who will demonstrate at your convenience. Or, you can write for Bulletin V3-22; no obligation, of course.*

*Kodak Pageant Projector* > **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N.Y.**

hola

**Student tapes take  
foreign language  
correspondence  
to other areas,  
to other states,  
to foreign countries**

by Bernard T. Hanley

The casual comment of a student started ball rolling. It was an idea of using student-made tape recordings in a foreign language as a method of student-correspondence.

For some time we had been experimenting with tape recorders in an effort to decide whether a language laboratory would be a worthwhile item to install in our schools. While working with the first unit of such a laboratory a student made a remark which provoked the whole train of thought leading to students' inter-school foreign language tape recordings. When asked whether he would like to have his second made French tape played so that his fellow students could hear what he himself had been hearing through his earphones, the student's reply was: "No! they will notice all my mistakes. I'd work harder and make a better tape if I knew from the beginning that they were going to listen to it."

There was the beginning of the idea . . . if few low students could stimulate a student to work harder and more attentively, why wouldn't someone with whom he corresponded be an equally efficient stimulus. As the idea germinated, more and more possibilities seemed to evolve. Here was the chance for students in one part of the country to talk with students in another. If, while conversing, they were to use a foreign language which each was trying to learn, a double purpose could be served. Most desirable of all, as all teachers would recognize, was the stimulation to self-activity, motivation to mastery, and the "pursuit of excellence" in the use of the foreign language. This was an efficient student challenge.

The students in the French and Spanish classes were asked, "Would you like to talk with other teenagers about the things that you are doing in school, about your dances, your basketball games, your various activities? Would you like to do this in the language you are studying and to receive an answer in the same language?" At first they were skeptical. Would it work? How would we do it? Do we have time? How do we know that they will answer? I had already contacted teachers in other cities and these teachers were confident their own students would be interested. With this assurance a small group decided to give the idea a chance.

Students of the French class were the first to try. They decided, first, to write in English what they intended to say; second, to put it in grammatically correct French; third, to practice reading aloud, and finally to record it on tape.

In the actual recording, a girl acted as the moderator. She introduced herself and the various students taking part. Each student told a little about himself, his family, his father's occupation, the various industries in the area or similar items of personal interest to students. As an added feature for the opening and closing

f the recording, a student brought a record of *le Marseillaise*. While the tape was being produced, we opened with this record. Having timed the final section of the record, we held it until the last student was speaking; then by "fading in" we timed it so that the final bars of the number could be brought up to peak just after the last voice finished. The students were most happy.

Anticipating this student interest, I had contacted friends in schools of the Buffalo-Lackawanna-North Tonawanda, New York, areas. These teacher friends were awaiting the tapes which arrived by mail. The teachers arranged for their students to hear our students speaking in French and telling of their activities (in addition a Spanish recording was sent for Spanish classes). The immediate response was: "Why can't we tell them what we are doing?" "You can" was the answer, and the whole idea turned into an inter-school working project.

For students in western New York, the spinning tapes brought a first hand account about Long Island, its activities, expanding economy, sports and other student interests. Here was opportunity for a more intimate appreciation of what Long Islanders were like, what they did and how they thought. For the western New York teenager, this was an enjoyable experience.

The students of Long Island, on the other hand, learned by word of mouth (in French or Spanish, of course) just what went on in the Niagara Frontier. They learned about the huge power projects, the steel mills, the area's many industries—not an easy task to translate many of these items into a foreign language, the social activities of students of their own age, sports, dreams and future school plans. One student remarked, "what an easy way to learn social studies; the Niagara Frontier seems real to me now." This, of course, made the social studies teachers happy, and at the same time the foreign language teacher was finding less difficulty when she requested correct grammar and proper inflections from her students.

The following question was inevitable. How to expand the correspondence-tape project so that students might talk with their confreres in other areas and in other states? I contacted several out-of-state audiovisual directors with whom I was acquainted and, at state and national conventions, began to ask others whether teachers and students of their school might be interested in this project. The response was the same in most instances. At first it was "Hmmmmmm . . . a possibility!" Then, as the many facets of the idea caught their attention, they said "Yes, let's try it."

Possibilities of sending tapes to foreign countries was a natural next step in the plans. Almost everyone has an acquaintance overseas. For example, I contacted a former co-worker of mine who was teaching in Germany. In addition, there were friends in colleges of foreign countries with whom I had studied at a university summer session; I had also met teachers while visiting in Mexico. Here were friendly contacts who proved to be graciously interested in the tape project. For those without personal contacts, of course, there always is the local embassy of the

country with whose students a teacher may wish to direct tape correspondence.

There was one important rule we learned to keep in mind while making tapes. We eliminated anything which directed the correspondence to a specific destination or which dated the tape—the exception of course was the singing of Christmas carols and similar items which the students liked so much to send to others and which in turn they enjoyed hearing others sing in the various languages. By omitting a specific destination or date we were able to send the same recordings to several locations. We found that we were obliged to make several copies of such tapes as new contacts were made.

There was one problem in contacting students of non-English speaking countries. These students presently are studying English. They are not particularly interested, therefore, in hearing their own language from other students—although teachers of such students do have an excellent opportunity for pointing out the invaluable aid in learning better one's own language merely by helping to correct the efforts of one who is just learning the idiom.

To maintain the interest of these students of non-English speaking schools, we will provide the English as well as the language spoken in that country. They will be requested, in turn, to send their news or information in their own language and also in their newly learned English.

Thus each group of students will have the opportunity of speaking and hearing a foreign language. As suggested previously, each group hearing its native language also would benefit by critical attention to the accent, grammatical construction, and idiomatic efforts of foreign students.

Through the project, therefore, the students have been learning about people, how they live, what and how they think. It was no little revelation for growing youngsters to learn that many problems of their "tape-pals" were similar to their own, that strangers could cease to be strange, and could be friends by learning to talk with one another. The project is the next best thing to actually visiting these people.

Miss Berth Petit, chairman of the language department of Central School District II in Centereach, N. Y., helps Lois Kingsley and Viola Wilkinson tape a 'letter.'

# New Lab for M. I. T.

by Joseph R. Applegate

THE development of language laboratories can be traced to the increasing interest of students in learning to speak, as well as to read and write, foreign languages. In order to use and to understand the spoken language, a student must have more practice than he can usually get in class. The size of the class often severely limits the amount of time available to each student for speaking the language in class. For this reason, language teachers have been looking for effective ways of increasing the amount of time available to students for practice in hearing and using a foreign language.

The mass production of magnetic recording devices made it possible to install recording and listening rooms for language practice in many schools. Although these did provide additional time for practice, they were not entirely satisfactory. The initial cost was high, and maintenance was expensive. Furthermore, the students usually had to manipulate several controls in the proper sequence, and this often served to distract their attention from the more important task of learning the foreign language.

One of the reasons for the lack of efficiency in early language laboratories was the fact that the equipment used was not designed for teaching but for other uses. To correct this situation, Prof. W. N. Locke, head of the department of Modern Languages at Massachusetts Institute of Technology, conducted extensive surveys of the needs of language teachers. Then after much consultation with electrical engineers he prepared a set of mechanical and electronic specifications for language laboratory equipment.

The first installation of the equipment prepared according to those specifications was installed at M.I.T. in March, 1959. This was the pilot model of an electronic language laboratory system, the Linguatrainer (trade name for the system produced by General Electronic Laboratories, Inc., Cambridge, Mass.). The pilot model consisted of 14 student positions; the system at M.I.T. has now been expanded to a 30-position system.

The system consists of three major components: the student booth, the teacher's console and the remote-control tape unit. The sides of each booth are lined with fiberglas covered with

masonite pegboard to shut out extraneous noise; and the front panel can be raised to provide greater privacy during practice sessions or lowered to permit the student to see the front of the room when necessary. The only moving parts in the student's booth are a headset consisting of earphones with a boom-mounted microphone attached, a record-listen switch, and a volume-control knob. (The selection of the recording that a student is to hear and the movement of tapes in the tape recorder are controlled by the teacher.)

The teacher's console contains all of the controls that are necessary for operating the system. From the console the teacher can start and stop tapes, select the master-recording that a student is to hear, speak to the class as a group, monitor individual students, and speak to students individually. The reduction of controls at the student position to a minimum results in a substantial reduction in maintenance costs. Furthermore it leaves the student free to concentrate on the task of learning the language rather than on manipulating various controls.

All the recording and playback equipment for the system is contained in the remote control tape unit in an adjoining room. There are 30 dual track tape recorders, one for each student position. The tapes are endless loops kept in plastic cartridge tape handlers. The use of endless loops eliminates the necessity for a high speed rewinding mechanism. This, in turn, reduces the amount of damage to tapes, for most tape breakage and spilling occurs when the tape is moving at high speed.

Use of the cartridge tape handler also eliminates the necessity of threading tapes carefully across the recording and playback heads. The cartridge is merely inserted into the proper slot, the connecting rod is pulled out to press the tape between a roller and a revolving capstan, and the machine is ready to start.

Eight of the tape recorders in the system are wired so that recordings on the upper track of tapes in those machines can be broadcast to any booth in the system. These are the playback machines for the eight master channels. In addition it is possible to have each student hear the upper track of the tape that is in his own recorder. There are, in effect, nine master channels available for each student (except those in the eight positions used for master channels). Only the lower track of a tape can be used for student recording. This arrangement prevents accidental erasure of a master recording.

Before the beginning of a lesson, the instructor inserts the master tape for his class into one of the eight master positions. Into the other

---

Dr. Applegate is a member of the department of modern languages and research laboratory of electronics at M.I.T. The work of the research laboratory is supported in part by the U.S. Army (Signal Corps), the U.S. Air Force (Office of Scientific Research, Air Research and Development Command), and the U.S. Navy (Office of Naval Research).

positions, he puts blank practice tapes. Then, at the console, he turns the channel selector switch for each student position to the number of the master channel to be used. When the students come into the room they take their places in the booths and put on their headsets. The teacher can give instructions to the entire group by using the intercommunication system.

Each student pushes his record-listen switch to 'Record', and as he does so a pilot light goes on in his booth and in the small rectangle containing the master selector switch for his position on the teacher's console. By glancing at these lights on the console, the teacher can see that all students are in the 'Record' position. He then pushes the switch that starts all of the tapes, and the students will begin to hear the master-recording. After a few seconds he can move the top-start switch to the 'Auto-Stop' position so that each tape will stop automatically when it reaches the end.

As each student hears the master-recording through his earphones a copy of it is being made on the lower track of his tape. (Any previous recording on this track is automatically erased as this is done.) During the pause that occurs on the tape after each sentence or phrase, the student makes an appropriate response, which is also recorded on the lower track of his tape.

While the students are listening and recording, the teacher can monitor any position by using the talk-listen switch for that position on the teacher's console. When he pulls the switch toward him, he hears whatever the student is hearing, that is, the master-recording or the student's response. If, as he listens, he hears a serious mistake, he can push the switch in the opposite direction and speak to the student individually. If the student's record-listen switch is at 'Record', the correction or comment will also be recorded on the student's tape.

After the student has heard the entire master-

Students' booths. The front panel can be raised during practice sessions or lowered for personal classroom participation.

The teacher's console. A feature of this unit is the reduction of controls it makes possible at the student post.

recording, he pulls his switch back to 'Listen'. The pilot light in his booth and the light for his position on the teacher's console go out. If the stop-start switch has been set at 'Auto-Stop', each tape will stop automatically when the end of the loop is reached. In order to start the next phase of the lesson, the teacher must push the switch to 'Start'. Before he does this, he may make comments about the performances.

During the next phase, each student hears a playback of his individual recording, which includes a copy of the master-recording, his responses, and any comments made by the teacher. As he listens, he can compare his responses with the master-recording and note any discrepancies. He can evaluate his responses by using the criteria supplied by the teacher, thereby recognizing his own mistakes. The instructor can also monitor during this phase of the lesson and speak to any student individually, as before, but his comments will not be recorded. When all tapes have stopped, the instructor can have the students repeat the cycle or he can conduct the rest of the lesson as he would in an ordinary classroom.

The system is very flexible, as one can see from the description given above. Additional flexibility is provided by an auxiliary input jack that makes it possible to connect a standard tape recorder, record player, radio, or sound track of a motion picture to the system. The laboratory may also be used by the students for practice sessions. In this case, each of the eight master channels can be used for a different master-recording, so that eight groups can work simultaneously. A number of students can work on individual assignments at the same time.

This system is the result of careful study of the special requirements that an electronic language laboratory system must meet. While it is true that the Linguatrainer comes closer to satisfying these needs than many other systems, more research is needed. One of the problems that requires special attention is that of determining the optimum frequency response of language laboratory equipment. Work in speech perception of speech transmitted over voice communication has shown that perception of speech transmitted over voice communication systems is affected by the bandwidth of the system.\* As the higher frequencies are eliminated, the speech becomes less intelligible; that is, there is more confusion of one sound with another because information necessary for identification of certain features has been eliminated. Furthermore it is possible to determine at what frequency levels various phonetic features disappear.

Heretofore almost all of the work on speech perception has been done with subjects who were native speakers of the language that was transmitted. In language laboratories, we are not concerned with the perception of contrasts in speech by native speakers. It is possible, therefore, that

\*A more detailed discussion of some of these problems can be found in *An Analysis of Perceptual Confusions Among Some English Consonants*, George A. Miller and Patricia Nicely, *Journal of the Acoustical Society of America*, Vol. 27, No. 2, pp. 338-352, March 1955.

The remote control tape unit. This instrument, kept in an adjoining room, contains 30 dual track tape recorders.

the results of previous studies are not applicable to the determination of electronic specifications for language laboratory equipment. A non-native speaker may need more information in order to identify sounds than does the native speaker. It is probably true, however, that even for non-native speakers, increasing the bandwidth beyond a certain point does little to reduce the confusion of one sound with another. The problem in designing language laboratory equipment is therefore to define the optimum bandwidth for the system.

It is easy to see that this problem is important, for high fidelity equipment is expensive. But if such equipment is necessary for effective learning, money spent for less expensive systems that do not provide an adequate frequency response is wasted. Because of its importance, an investigation of the problem has been started at M.I.T. The research, supported by a grant from Educational Facilities Laboratories, a Ford Foundation agency, will be conducted over a two-year period by the author. It is the first step in the development of a research program which, it is hoped, will continue to test the application of recent advances in linguistic theory to the special problems of language teaching.

# The Voice of Silence

by Harry J. Skornia

*These notes are based upon an article I read in the Cahier d'Etudes de Radio-Television, Volume 20; published by Flammarion for Radiodiffusion-Television Francaise.*

The article is by Jean Claude Piguët. It is entitled simple "Le Silence." M. Piguët points out that in all teaching situations there are really three voices at work: the voice of the teacher, the voice of the student, and in the silences, the voice of the subject under discussion—truth. Just as white space is essential in art or print, in sound communication silence is essential to learning, appreciation, understanding, the making of decisions, the comprehension of meaning.

It is difficult for some teachers to realize—especially the ones who want to talk continuously on a television program—that the objective of the program, in fact, the role of the teacher, is not to teach, but to help others learn. Teachers' words, which sometimes seem to flow compulsively, play only a part of the role or function demanded in the learning process. Visuals, and frankly silence, have equally important roles to play.

We have lids on our eyes. We can blink out visual distractions and images. We have none on our ears. In the bombardment now occurring, in which the noise level of our mass media, industry, advertising, are pitched a tincreasing higher volume and tone, the turn-off switch has to be 'farther up the line'—in the mind. Unfortunately we're likely to find it turned off at times when it should be on. Then we say "What did you say?" or we just skip it.

To return to the article: M. Piguët points out that the truth 'heard' in the silence is not any one person's truth, but truth as an invisible spirit. In Quaker meetings there are great blocks of silence. But this doesn't mean nothing is happening. I personally believe that more happens to the individual concerned in a meaningful, worshipful sense than would have occurred in another service in which silence has been reduced to a minimum. This calm communion of spirit to spirit that silence can bring is much too infrequent in today's world.

In music, sounds and tones sparsely strewn on a desert of silence have a special effect. Comparable effects are possible in poetry. Music, without silences and pauses, would not be music. (And much of course isn't, now-

adays!) But the silence which surrounds discourse or music should not be confused with the silence which either can include.

Such *included* silences are not the absence but the presence of an essential part of the dialogue, the communication, the work itself. The pauses and silence of a great speaker are sometimes the most effective parts of his speech. Sometimes more can occur in listeners' minds during those silences than during the shouting and emphasis we normally think of as 'the speech'. In the written word, punctuation and white space play the role of silence.

Mass media in the United States have accomplished one thing: by blaring example they have convinced too many people that silence is something to be abhorred. Like solitude, silence has become socially unacceptable. Our children study with radios or records blasting at full volume. After hearing a challenging program, which we should then think over, we instead yield to the urge not to miss the next one. With one idea driven out by the next, we rarely settle down to silent concentration. The 'third voice', the voice of the subject or problem, is never heard. Our mind is kept floating on the surface of problems and never has the silence and concentration needed to really explore or probe them. Great documentaries on radio and television should be followed by enforced silence.

There is much to learn from oriental philosophies and religions. We could well begin to learn that silence is not only useful but essential. The constructive and the sublime alike are generally created out of silence and contemplation. Not out of filling each waking moment with talk, noise, tranquilizers, late movies, Westerns, and 'thrills' which each year lose their bite for lack of 'white space.'

M. Piguët points out that to be silent is not only not to talk. It is to allow reality to come to us. For man is a very special creature.

Do we as teachers and communicators and those who have the power and responsibility to stimulate thought—do we have the courage to help create silence for those who would learn? Do we dare to create more silence within our communications, and to provide an environmental setting of silence to surround our sounds? Can we discover the effectiveness of the blank screen and dead air? Can we let the voice of silence speak?

# Interview

# By

# Telephone

by Elizabeth M. Grimes

**B**ULL's father is president of a machine tool company, Marjorie's is a truck driver, Judy's owns a small retail store, Jan's is a lawyer, Dan's is a Democratic committeeman, Joe's is on the town council, Anne's is an importer, Ted's is a bank teller and Jim's, a policeman. What a wealth of information and experience there is here—far beyond the ken of teachers, textbooks, or school library facilities! Yet this is but a fraction of the knowledge held by the parents of any senior class. Too seldom is it tapped for the course where such enrichment is appropriate.

In Glen Ridge High School our twelfth grade social studies course consists of five months of economic theory, together with American economic history. For the rest of the year, we study United States government. Such a course needs to be related to reality insofar as possible. Devices such as the school bank, Junior Achievement, the Student Council and Court are helpful activities but they are, at best, only facsimiles. Even if well developed, they remain a kind of play-acting far removed from the actual experience of a man who spends his whole time at business or profession.

All of us try to use this knowledge. "Ask your dad what he thinks, Jack. He'll know from his work at the bank," is a common way to do it. Having Jack's father come to talk to the class would be the best way were it not for the difficulty of fitting it in his busy schedule. The taped recorded interview has been used with great success, but it involves getting equipment, students and interviewer together and will sometimes kill several hours of a man's time. Most parents are very gracious and willing to help when approached by the students, but it seems an imposition to request a lot of preparation.

"Let's call him on our phone" is our method. It has resulted in spontaneity, convenience, and wider use of a classroom telephone, an amplifier which enables the class to hear the conversation through two jacks, an office switch which cuts us in to one of the central office telephone lines, a "beeper," and a tape recorder if other classes are to hear the conversation later.

The total installation charge was \$36.90 and the monthly charge \$6.55. The latter figure could be reduced to \$4.55 if it were possible to make one of the office phones portable. Toll charges are kept at a minimum. On the whole, the cost is reasonable in relation to results.

Whenever possible those interviewed are parents. A poll of class members on the subject of parent occupations must be taken early in the year. It requires some probing to get useful answers. A student may simply say "foreman" and if prodded will add "in the Excel Company." Yet what the company makes, plus other details must be known to make the picture clear.

Sometimes there is no parent who meets the requirements. We had none who were Congressmen, or state legislators, or labor leaders. Yet classes wished to phone these men. Letters from students brought quick response in every case, even from strangers, and the dates were set.

Usually a specific time is planned in advance.

*Reprinted from New Jersey Education Association Review.*

with the person we wish to interview. How convenient this arrangement is for him is often illustrated. "But I couldn't possibly come to the school at 2 o'clock Monday. I have a management meeting at 2:30. . . Oh, you mean just over the phone from my own desk? That presents no problem. I'll be glad to do it."

A few, who somehow believe high school students might embarrass them by their questions, are a bit reluctant at first and ask for samples. When it is apparent from these that they will be asked only for their opinions and the knowledge gained from their experience, none hesitate.

Our calls are made only when directly related to the unit at hand. We have never called anyone without prior study of the matter since our need for an interview is a product of that study. The interviewer, who is always a student, must be familiar enough with the subject to discuss it intelligently. Questions have been submitted by members of the class and sifted by a committee in advance.

Consequently they may be penetrating. "Is subliminal advertising morally defensible?" caused a good deal of hedging by an advertising man. "Do you approve of the Federal Reserve's tight money policy?" gave us a thoughtful answer from a banker.

Questions inevitably include the naive, too. "What do you have to do to start a small business?" brought a laugh from a retail store owner who said, "Well, son, I'd say the first thing is to get a loan." "Can you get rich in penny stocks?" resulted in a lengthy warning from a broker who surprised them with the information that his firm will not buy unlisted stocks selling for less than \$2.00 for any customer.

In addition to prepared questions, spontaneous ones are encouraged. As the conversation de-

velops, the interviewer should not stick too closely to his plan. Quite naturally an answer may draw impromptu questions from the interviewer, other members of the class, or the teacher.

There is no doubt that through this device student horizons were broadened. Their eyes were big as they heard the vice-president of a company with resources of over \$14 billion speak of anything up to \$6 million as a "small loan" and say they keep about \$200 million in the bank "just to run the company" from day to day.

The school superintendent was asked to explain why the price of milk in our cafeteria is at its present level and what the cost of a new gymnasium would be per family tax bill.

To "Is advertising worth all the money spent?" the reply started with "I prefer to use the word invested" and went on to present a viewpoint novel to them.

When an importer talked casually of tramp steamers, African and Asian ports, average elapsed time from order to delivery, and how Belgian steel wire can undersell American, he spoke a magic tongue.

They were intent as a Congressman told of his typical day, of the favors his constituents expect, and how much his mail influences his actions. It was to be expected that he would take the chance to speak of their responsibilities as future voters just as an insurance broker took the reckless teenage driver to task in discussing rate making.

Though still in the experimental stage, our phone has been a success. It has stimulated student interest, varied routine, helped to bridge the gap between books and experience, and utilized parental talents with minimum effort. If such a device is used with discrimination, its potential is limited only by the imagination of teacher and students.

Glen Ridge High School seniors using telephone, tape recorder and loud-speaker to interview valuable members of the community on questions under study in their social studies class.

# YOURS FOR THE ASKING!

Tecnifax Corporation is continuously developing in its Visucom Laboratories new and interesting techniques for using the "overhead" projector. Training in these techniques is available to you, without charge for materials, facilities or instruction, through the following services:

**SEMI-ANNUAL SEMINAR-WORKSHOPS** . . . at these hard-working, three-day seminar-workshops, over 500 attendees acquire information, exchange ideas, and use new visual techniques to solve communication problems . . . 16 held to date.

**VISUCOM PROGRAM** . . . this continuing training program provides first-hand experience in the preparation of "overhead" projectuals . . . five-day course . . . small classes . . . facilities for working out specific projects.

**TECNIFAX LITERATURE** . . . a series of brochures published by Tecnifax to provide useful and interesting information for workers in the field of visual communication.

FOR ADDITIONAL INFORMATION, call or write Tecnifax Corporation, Holyoke, Massachusetts.

Tecnifax equipment and materials are approved for purchase under the National Defense Education Act.

**BRANCH WORKSHOPS** . . . projectual-making workshops are also conducted at Tecnifax' twenty-six sales branches . . . registrations are accepted for groups or individuals.

# AUDIO

by Max U. Bildersee

Three separate requests for assistance, but the invitations were remarkably similar! The librarian who called said, "We are inaugurating a program of lending records to our patrons. We need advice on both equipment for our use here and on the selection of records for our loan collection. Can you help us?"

The school superintendent wrote, "We are looking for someone who can spend some time with us and help us understand the place of tape recorders and phonographs in instruction. We are particularly interested in the needs of our gifted children. Can you help us?"

The teacher training specialist said, "We must expand the audio aspects of our audiovisual program. But we have a minimum background of information and we don't know where we can seek aid. Can you help us?"

The invitations were remarkably alike—we need help! The implied question was not "Can you help us?" but rather "will you help us — and what do you propose to do?"

It is not strange that the answers were equally parallel—"Yes!" And it is not strange, either, that the proposed activity in each instance involved more listening than talking, more experimentation than exploration.

## In The Library

The visit to the library was pleasant but very brief. We spent an evening with the librarian, her assistant and several members of a local board representing community organizations. We carried just a few samples: an inexpensive phonograph, a pair of commercial headphones and a heavy armful of records.

We started the evening by mentioning that great varieties of non-musical recordings are available for library collections. We reminded our friends in the library that poetry was available in tremendous quantity, plus drama, historical events and re-enactments, stories read 'word-for-word' as well as stories presented dramatically. Then we introduced the idea of library collections of language recordings for home study enthusiasts. Going a bit afield from the purely spoken record there are a number of American

folk-song recordings as well as other folk-song recordings from all over the world.

In response to a question about the publishers we informed the group the records were produced by well-known as well as lesser-known producers. There was, for instance, the comparatively new JB (RCA Victor LD 6075) and the much older and yet delightful *Death of A Salesman* (Decca DX-102) and *John Brown's Body* (Columbia SL 181). Lesser-known producers have offered *School for Scandal* (Angel 3542-5S) and *Merchant of Venice* (Caedmon 2013). And then there are such recordings as Ibsen's *Hedda Gabler* (Theatre 3) and the *Hamlet* produced by Word Recordings.

We went further, and talked of some independent producers who offer small but very select catalogs. These included Lexington and such book publishers as Harcourt, Brace.

"But," we were asked, "aren't these all adult recordings?" We admitted they were, but pointed to the recordings of stories for children—straight readings with appropriate musical backgrounds—produced by Weston Woods, the simple poetry for the younger group in the Harcourt, Brace catalog of recordings, the tremendous literature produced by major producers already cited, and other producers including Disneyland, M-G-M, Capitol and more.

We made special mention of the

broad offering included in the Folkways catalog, which covers all the areas mentioned and others as well.

We stressed the audio contributions of Enrichment Materials not only to classroom instruction but to library listening programs and to home listening. We mentioned the National Association of Broadcasters and, to give adequate attention to the records, we introduced side 1 of their album *The Ways of Mankind*. Side 1 is subtitled "A Word in Your Ear" and discusses in detail the functions of language.

We didn't talk much after that because our friends wanted to listen to spoken records. And they did. They sampled many of the records already mentioned and more from the catalogs of Spoken Arts, Caedmon, Period, Spoken Word and others. To cap the evening we offered the idea that libraries could become important record producers.

My friends were skeptical. They viewed their own facilities and thought this impossible. But we told of Yale University's new venture in offering many records of modern American poets reading their own works. And then we suggested that they listen to a bit of what the Clements Library at the University of Michigan had already done, and we played a side of *Voices of the American Revolution* for them.

The one hour meeting broke up—after two hours—only because the library had already closed and the building superintendent wanted to get home. But as we left, one of the participants remarked, "You've opened up a whole new world for us."

## Visiting the Teachers

Visiting the teachers was quite different. To begin with, we carried no equipment. The school supplied it all.

**— A WORLD OF SOUND ON FILE —**

In the second place, we needed a battery of machines—not just one—and ample room so that several groups could listen at one time and so that a much greater variety of materials might be demonstrated.

Further, literally, we had all day. We were shown into a large room, a classroom and a half in size, and in addition to the usual classroom furniture there were tables for showing records, a number of strategically placed record players and a supply of chairs for those who might be visiting.

In addition teachers of neighboring schools had been invited to participate 'after hours'. We not only had 'all day' but we had all day to be busy.

Teachers having free periods would wander in and ask about records for particular study areas, for particular smaller groups, plus questions about particular items. We had a variety of records—the variety which has been reported in these columns over a period of more than ten years.

The language teachers were especially interested for they were facing increased challenges and increased opportunities. What have you in Spanish (or French) for the elementary grades? Is there anything to go with this textbook, or that one? Are there any French plays on records? How about French poetry, is there any? My children want to hear some French children's songs. Have you any? My brighter students need additional challenge; can records help them?

Of course the answer to most of these questions is 'yes.' And in many instances the records were on the table for these teachers to see, to handle, to audit and appraise, to ask their audiovisual director to buy. For elementary school languages we could show the product of three companies with assurance that they would be usable.

These companies are Ottenheimer, McGraw-Hill and Encyclopaedia Britannica. The latter two offer both records and coordinated filmstrips, the former records and coordinated work books.

Teachers seeking records to go with textbooks were referred to Oxford University Press, Appleton-Century-Crofts, Houghton-Mifflin and Company, Ginn and Company, Henry Holt and D. C. Heath. French plays and poetry, recorded, are available from a great variety of sources including the major companies mentioned earlier, some of the less well-known companies and others including Period Music and the Spanish Music Center.

Teachers seeking stimulus for advanced language students as well as additional information for gifted students were referred to such producers as Wilmac and the many producers of self-study language courses including RCA Victor, Columbia, Decca, Cortina Academy, Berlitz, Lingua-phone, Funk and Wagnalls, Folkways and Educational Services.

There was plenty for the language people, and the English teachers were similarly delighted with what they found. One borrowed the NAEB *A Word in Your Ear* to present to his senior class. Another begged for *A Tale of Two Cities* (Decca DL 9059) because her class was just reading it. We, of course, were delighted to oblige, and let another teacher borrow *A Man Without A Country* (Decca DL 8020) for immediate presentation to her students.

The history and social studies teachers were delighted to find audio materials to aid them in their efforts to strengthen instruction in a variety of areas. Enrichment Materials, Folkways, Columbia, Coral and other labels were there for them to see and hear. There were three reactions, all positive. Teachers expressed their in-

terest by saying "I could use this next week," or "If we owned this record could use it right now," (they borrowed it for 'right now') and "I wish we had had this last week."

The music instruction people were looking for musical performance and found none. But they found excerpts galore in the recordings intended for music instruction and designed to introduce the instruments and the orchestra to students. They didn't know that so much was available. Particularly they liked recordings by Jam Handy (with filmstrips) and the Music Education Record Corporation.

As the day progressed considerable attention was given to the needs of the gifted students who had both the talent and the capacity to study alone. Much conversation was given over to talk about their interests and needs to opportunities available to them for particular enrichment through listening to recordings by Audio Education, Caedmon, Spoken Arts, Spoken Words, Folkways and other publishers. There were the students who could 'go it alone' if the material was available. And the teachers discovered that it was—on records—and could be made available for small group listening as well as for individual audit.

We could only stay the day and could not immediately assess results. We felt that enthusiasm had been generated. We did not anticipate the ultimate reaction. Our host, the school superintendent, wrote us some weeks later that it was all very fine "except for the fact that next year I will have to increase my audiovisual budget to include much more for recordings." He added that he considered this "an easily defensible budget item."

And once again the wealth of materials on records, the impact of hearing even a bit of it, had carried the day and won a new following.

## At the Teachers College

Our task at the college for teachers was double-barrelled. We not only had to discuss with the faculty audio contributions to college instruction but we had to demonstrate records for the undergraduates.

In order to satisfy the latter need we set up an audition room similar to that described for our visit with teachers. Because this college dealt with the preparation of elementary school teachers particularly, we carefully included in our traveling collection records from Stratco, Weston Woods, Bowmar, Young Peoples Records, the Childrens Record Guild, Audio Education and other producers already cited. This room was left in the charge

of the students, and they conducted their own listening laboratory without supervision.

For our meeting with the faculty we had included some more adult recording by major and minor producers. In the meeting with the faculty we suggested a tri-faceted audio program involving the instructional use of recordings, experimental use of elementary recorded materials and a leisure listening program revolving around the college library.

We pointed to many recordings suitable to college instruction. Among these were *The Jeffersonian Heritage* (National Association of Educational Broadcasters), *The Ways of Mankind* (NAEB) and the NAEB's *People Under Communism*. We stressed the great variety of fine reading of prose and poetry as well as the gamut of literary and historical recordings available. We pointed out that such recordings can be effectively used in appropriate segments for group listening and in larger segments by individuals listening alone.

The materials on display in the improvised listening laboratory were mentioned and discussed in terms of sample lessons, examples of good procedures, demonstrations of performance and careful selection of material for the intended audience. Simplicity, so essential in the child's recording, was stressed.

In addition to a somewhat easy-going leisure listening program recommended for the library, which would include many of the discs already mentioned, Broadway shows, show tunes and selected popular and classical music, we pointed up a formal program which libraries could readily undertake. This would involve selected readings and performances spotlighting either the author or the performer.

Thus there could be special programs involving the works of Millay, Longfellow, Tennyson, Keats, Shelley, Shakespeare and many other writers. Indeed, we pointed out that programs could be evolved to deal with American writers, English writers, Romantics, Elizabethan writers and so forth. The variety is broad.

Then we added to this the importance of the artist. An evening of readings by Orson Welles, Boris Karloff, Siobhan McKenna, Walter Starkie, S. J. Perelman, Dr. Frank Baxter and many others. A broad program of audio appreciation involving the spoken word lies immediately within the grasp of every library and this was stressed both as an opportunity and as a responsibility.

And, as is inevitable, we anticipated and had the satisfaction of introducing

these aspects of education to undergraduates.

To these students approaching their responsibilities as teachers we could point out the advantages and disadvantages of tape and disc record players as well as of recorders. We discussed the typical uses they could make of these machines in instruction and in remedial work in speech, music and reading. We went on to point out the many applications of such equipment in speech and language arts instruction programs, in creative work, in physical education and in other aspects of the elementary school instructional program.

We challenged these new teachers to be their own best friends and most demanding critics. We suggested to them that they set a tape recorder in their classrooms and actually record a period of instruction directed by themselves so that each could hear himself and herself as a teacher and could then analyze and appraise individual strengths and weaknesses. This—self recording and self evaluation—may be one of the most neglected areas of teacher training.

One student teacher raised the interesting question of the function of the recording in tantalizing and developing imagination. This student pointed out that many books and all films and TV programs supply or attempt to supply the whole experience and do not give the viewer/reader an opportunity to participate except as a passive receiver of information.

The student went on to point out that many areas of communication are incomplete because this personalized

multiplicity of information and stimuli and individualized reaction is either non-existent or is stunted by the very thrust upon the student. He stressed that students can supply totally different, equally relevant, highly personal, imagined illustrations and in so doing they give the heard experience—the listening experience—a depth and breadth unattainable through other instructional devices.

We came away from these experiences happy that we had accepted the invitations. We came away hopeful that we had, in each case, been able to help. And finally we came away from the training college for teachers convinced that, amid the welter of claims and counterclaims, our young people have adopted most intelligent and questioning attitudes, particularly toward those who prophesy that mass education will undermine the proper relationship of the individual student and teacher in the learning process.

We came away convinced that these young people will carry forward the traditions and the attitude of progress and instructional improvement which has marked American education throughout its history. We are also convinced that they will not surrender their prerogatives as teachers to become monitors and minor mechanics to electronic instruments or teaching machines.

# FILMSTRIPS

by Irene F. Cypher

Photographically speaking, it is possible today to provide such truly beautiful color or black and white pictures that it seems pathetic to us to offer anything but the very best for teachers and pupils to use in their classroom work. Children love color; they react to intriguing design and well organized composition and lay-out; they respond so spontaneously to sincere, honest story presentations.

The best proof of this is to observe the eyes of any group as they watch a film, filmstrip, slide or television presentation. Many projected pictures elicit a warm chuckle, a sparkle of the eyes, a slow gasp of appreciative understanding, and this is a wonderful phenomenon to see. It seems to us that no producer—professional or amateur—has a right to offer pictures that are trite, "wishy-washy" in tone qual-

ity or stodgy and dated. And no user of these same materials should select or accept ineffective visuals. The pictures we bring into our classrooms should truly be the means whereby we introduce pupils to trees, animals, buildings, people and anything else you care to name. Some of the newer materials that are coming to us are really excellent and that is why we take the liberty once again of including in this column a unit of slides (after all slides and filmstrips are closely related and should be used together more frequently).

*French Civilization as Reflected in the Arts* (a series of 30 slide lectures, with narrative tapes in French and English; produced by Cultural History Research, Inc., Harrison I, N. Y.; units of 50 slides, \$48.75, with tape in either language \$8.00; price selections listed in folder.) Both subject content and photographic quality of these slides is superb. It is a long time since we have seen slides of such beauty and excellence and it is a pleasure to recommend really good materials. The units provide, as the producers say, "an integrated approach to the cultural life of France" and this includes visual dealing with political, economic, social and art materials.

The tone quality and enunciation of the tapes is good in both the English and French versions. We could get excited over using these slides, for there is so much to see in them, and the photography is so good that you feel as though you were on the spot. To be recommended for art, social studies, cultural appreciation; certainly language classes will both enjoy and benefit from the comparison possible by using the tapes for study, and for conversation.

*American History Series, Set No. 3* (6 strips, color; produced by Young America Films, McGraw-Hill Co., Inc., 330 West 42 St., New York City 36; \$32.50 per set, \$6 single strips.) This unit carries us forward from the time of the post-Civil War and Reconstruction period to the end of the 19th century, when the United States becomes a world power. This is curriculum enrichment material, and suggestions are made for the use of many types of materials and projects in con-

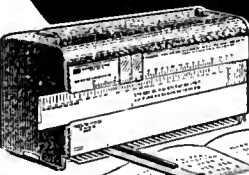

nection with use of the filmstrips. Basic vocabulary sections highlight names and terms to be studied and considered, and the content is specifically appropriate for grades 7 to 12.

*The Cowboy: Rodeo and Ranch* (single strip, color; produced by Vista Films, P.O. Box 2406, Sepulveda, Calif.; \$5.) This title alone is enough to intrigue boys and girls, but the picture content, too, is intriguing. We are taken to see the way cowboys work a the ranch to prepare for a rodeo and then to see the rodeo itself, with its program of special events and activities. Visual presentations of the branding and roping are interesting, and the picture sequences clearly illustrate how the cowboy handles himself and the animals. The strip has considerable interest potential for pupils and is good factual resource material for study of western life.

*Founders of America* 6 strips, black and white; produced by Encyclopaedia Britannica Films, 1150 Wilmette Ave., Wilmette, Illinois; \$18 per set, \$3 single strips.) To understand much of the development of the United States one must know the men who helped to found the nation. In this pictorial biography series we are introduced to Washington, Hamilton, Franklin, Marshall, Williams and Jefferson. The story treatment deals with the periods during which the men were active in the military and political affairs of the country and they are shown in relation to the events of the period in which they lived. Useful for any consideration of personalities and episodes in the American Revolution. The picture-story content can be adapted to classroom discussion and follows standard curriculum unit outlines.

*How We Get Our Homes* (4 strips, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$16.25 per set, \$5 single strips.) Home is a very important place to all of us, and we know that a good home is the work of many people. In this series, our attention is focused on how a home is planned, constructed and made ready for its occupants. Particular attention is given to the things a family looks for when they choose a home, in terms of building site, neighbors and community facilities. The material is listed as related to social studies units; we also think it is to be recommended for language arts work, for pupils love to talk about things close to them, and a home is certainly closely related to a major portion of their interests and activities. The material is also good for study of community workers, for it

FACTORY: Box 71, Waseca, Minnesota

SIMPLE | EFFECTIVE | DURABLE!

clearly illustrates the importance of builders, bricklayers, electricians, carpenters and plumbers. Good for the primary grades.

*Number Experiences* (6 strips, color; produced by Curriculum Materials Corp., 10031 Commerce Ave., Tujunga, Calif.; \$3.95 each strip.) Number work includes many things, from learning to use numbers and build number sequences to telling time and using money. The practical application of numbers is important and this material is designed to give the viewer opportunity to apply what he has learned about them. The presentations are developed in terms of the learning needs of grades 1 to 3. Every opportunity is provided to encourage discussion about numbers. Objects and symbols are shown in number groupings while coins and clocks emphasize the practical value of knowing how to use numbers. The viewer should be able to spend some interesting moments with this material.

*The Polar Bear* (single strip, color; produced by National Film Board of Canada and available from Stanley Bowmar Co., Valhalla, N. Y.; \$5.) Anyone who has ever visited a zoo knows how popular the polar bear is to young visitors. This strip takes us to see this great Arctic animal in its native home. We watch a mother bear help the cubs as they learn to swim and we see how polar bears find their food. Sequences give us an excellent picture of the islands and ice packs of the Arctic regions and we also see why the polar bear is important to the Eskimo. The visuals are clear and interesting, with a high degree of picture appeal for pupils of all ages.

*Use Your Library* (single strip, black and white; produced by American Library Association, 50 E. Huron St., Chicago 11, Ill.; \$6.) Intended for junior and senior high school students, this strip gives a lengthy explanation of how to use library resources to find the books, pamphlets and magazines you are seeking. There is a subtitle to the filmstrip as follows: "For Better Grades and Fun Too!" This part of the strip will need strengthening on the part of the discussion leader, for it is not made too clear that books do have a great potential for such goals. The strip is divided into sections, and is adapted for use when library facilities are explained to students and for discussion of how to use library files, card catalogs and information files.

*Communications to the Filmstrip department should be sent direct to the Filmstrip Editor: Irene Cypher, New York University, 26 Washington Square, New York 3, N. Y.*

## AO OPAQUE DELINEASCOPE

### LIGHTER AND BRIGHTER

AO's New High Speed Opaque Delineascope projects a brighter image than any other opaque projector. Improved, large-diameter, coated projection objective delivers a full 145 lumens to screen. You have clearer image definition in tone, contrast and detail... from edge to edge, from corner to corner of the screen. And, it's lighter than ever...only 29 lbs.

### RIGHT SIDE CONVENIENCE

New, modern styling and design places all adjustments on the right side of the instrument...where they belong. You operate switch, focus knob, optical pointer and handy roll feed...quickly and easily. Extra deep copy platform positions and locks instantly at any desired level...accommodates material up to 2½ inches thick. Every detail has been planned for your convenience.

### SERVICEABILITY

Large hinged access door makes it easy to replace bulb and clean reflecting mirrors. All-glass reflecting mirrors will not tarnish or deteriorate. AO's exclusive glass reflecting surfaces plus sturdy "unitized" construction assure projection precision that will withstand vigorous classroom use. You can be sure that your AO Opaque will still produce the brightest screen image, even after years of service.

## In the Church Field

by William S. Hockman

### Youth Workers AV Kit

How can I keep to one page all the nice things I would like to say about the content and format of those six-color filmstrips which the Broadcasting and Film Commission, 475 Riverside Drive, N. Y. 27, has just produced and released under the title "Youth Workers Audio-Visual Kit"?

First, the content is fine all the way; being the distilled wisdom and insight of the practitioners and researchers in the leadership of church youth. Mighty few flies in this ointment, if any! Here is guidance, enrichment, inspiration and motivation for everyone from junior high teacher to senior pastor.

Art-wise, a bang up job. While the six are similar, each is different although the art for two is by the same person. Among styles there ought to be only preference, not judgment, and I must say that I liked best the art of John Hearn Bear in *Decision Saturday Night*. The best commentary job, I believe, among six good ones is that of Helen Kromer in *You For Youth*, although her work in *Double Identity* and *Decision Saturday* is very competent. Marjorie Thompson (art) and Frank Donovan team up to do a fine job in *Through Faith and Fellowship*, and Wilbur Sweny and Donovan do an equally satisfactory piece of work in *A Friend To Youth*. *That Youth May Know* (the ways youth learns) was a tough assignment for Donovan (script) and Harry Singleton (art) but they sail through it in fine shape.

Seeing all six titles at one sitting was a lot of filmstrips for me and Mrs. Hockman, my faithful helper and wise advisor, but there was so much variety of treatment of content and format in the communicative art that we found it no trouble at all to keep going. Get a folder on this kit from the BFC. It is tops. It even follows the proposed new standards for filmstrip specifications, and how nice it is to handle these well-marked materials. Out of three decades of intimate work with church youth, and out of a familiarity with most of the visual material in the church field, and despite

"You for Youth"

"A Friend to Youth"

a definite tendency to be hard to please, I can write, "Highly recommended" for this fine and useful kit. Complete from BFC for only \$69.50.

### Filmstrip Reviews and Notes

Family Filmstrips, Inc., has produced a good and useful quartet of filmstrips under the title "Young Teens and Dating." The target audience is the junior hi bracket, their parents and, with care, boys and girls on the threshold of the teens.

*First Dates* gives useful guidance for those just starting out on the 'friendship adventure', and does so in a manner that teenagers will accept and respect. The same for *Whom Do I Date?* It gives sensible criteria for choosing persons whom it will be fun to be with. *Is It Love* helps boys and girls understand the nature of mutual attraction and the qualities of real love and friendship. *How To Act On*

*A Date* tells how to get ready, what to do, what to talk about, and how to maintain good standards of conduct. Each filmstrip has forty-odd frames of pleasantly stylized cartoon drawings and LP recorded commentaries. Highly recommended. Good buy for church's AV library at \$25.00 for the kit of four complete.

*Devotional Filmstrip Number One* is Cathedral Films' first venture in providing visual and recorded resources for devotional and worship use. The producer warns us that it is not designed or intended to supplant materials in some other format but rather to assist the person with a sanctified and creative imagination and enrich worship and devotional programs and services. Part I, *Passages From The Old Testament*, is illustrated by pictures of the Prophet Isaiah; Part II, *Selections From the Psalms*, is supplemented by fine color photographs of the Grand Canyon country; Part III, *Passages From The New Testament* are enriched by scenes in the life of Jesus. On side two of the disc we are given seven familiar anthems and hymns as sung by the Whittenberg University Choir. The recording is technically excellent and the pictures good, giving us a fine audiovisual resource. Complete with record, \$9.00. From your dealer or Cathedral Films, 2921 Alameda Ave., Burbank, Calif.

With the production of a 48-frame, full color art filmstrip with LP recorded commentary, *The Living Tree*, World Wide Pictures, Box 1055, Sherman Oaks, Calif., enters the filmstrip field. (Welcome, and may future productions keep to the high standards set in your first!) The story of Winfried, Apostle to the Germans, is nicely visualized and told. The climax of the story deals with the Christmas Eve encounter of Winfried (also known as Boniface) with Hunrad, priest of the god Thor, beneath the great branches of the Thunder Oak. Here is a story for juniors and junior highs in church school, in summer camps, in vacation church schools, clubs of all kinds and fellowship meetings. Based as it is on Van Dyke's *The First Christmas Tree*, it is far from a seasonal filmstrip. It is highly recommended. From the producer, \$10.00 complete with disc and user's guide.

In a 76-frame full color stylized cartoon filmstrip, *Stewart The Steward and the Magic Offering Plate*, Stewart goes round the world—on his flying offering plate—with some friends to find out where the money goes that they give to the church. Here is a whimsical treatment of the stewardship theme which will interest and in-

orm primary and junior children. Excellent for vacation and week day schools also. Produced by and available from United Lutheran Church, 900 Queen Lane, Philadelphia 29, Pa., for \$9.00 complete.

I have seen no other filmstrip which deals with the tabernacle of the Old Testament as competently and attractively as one just produced and released by the AV department of the Union of American Hebrew Congregations (UAHC), 838 Fifth Ave., N. Y. 21—*The Tabernacle As Described In The Bible*. The first ten frames sets the context and the next 16 give us, in fine photography by Dr. Nahum T. Gidal, views of the superb model tabernacle created by Rev. L. Schouten, a Protestant minister of Utrecht, The Netherlands, about 100 years ago. As the camera moves over this splendid model, we learn about the worship and sacrifices that took place in this ancestor of the Great Temple. Highly recommended for synagogue and church schools. Price \$7.50 from UAHC.

In the first frame of a remarkably beautiful filmstrip, *Yochanan Ben Zakai: Teacher of Peace*, we see the great and aged Hillel choose Zakkai to be the spiritual leader of the Jewish people and hand to him the scroll of the Torah. In the next 35 lovely color pictures we are told the story of this great leader of the Jews in the days of the Roman occupation and conquest of Jerusalem and how he struggled to establish an Academy of Jewish Learning to perpetuate Judaism when it was threatened by Roman annihilation.

William Steinfel's art is pleasing and effective, and the commentary of Rabbi Ely E. Pilchik concise and interesting. The guide for the user is made more useful by the inclusion of b&w reproductions of the frames of the filmstrip. Since this deals with times, people, and events little known at the lay level in most churches, this filmstrip is highly recommended for use with young people and adults in their various study and fellowship groups. Certainly all Jewish educators will keenly appreciate the excellence and utility of this fine production. Complete, from UAHC \$7.50.

Jerry, eighth grader, had an assignment to report on what makes our family Christian? He began to look around. He was confused by what he saw. Boy, what a family! It comes together for meals (mostly) and goes to church together (just about all the time) but how it flies apart after supper! Yet, they do have something. What is it. Jerry tries to figure it out. So will you as you see this 85-frame

stylized cartoon color filmstrip unroll before your eyes.

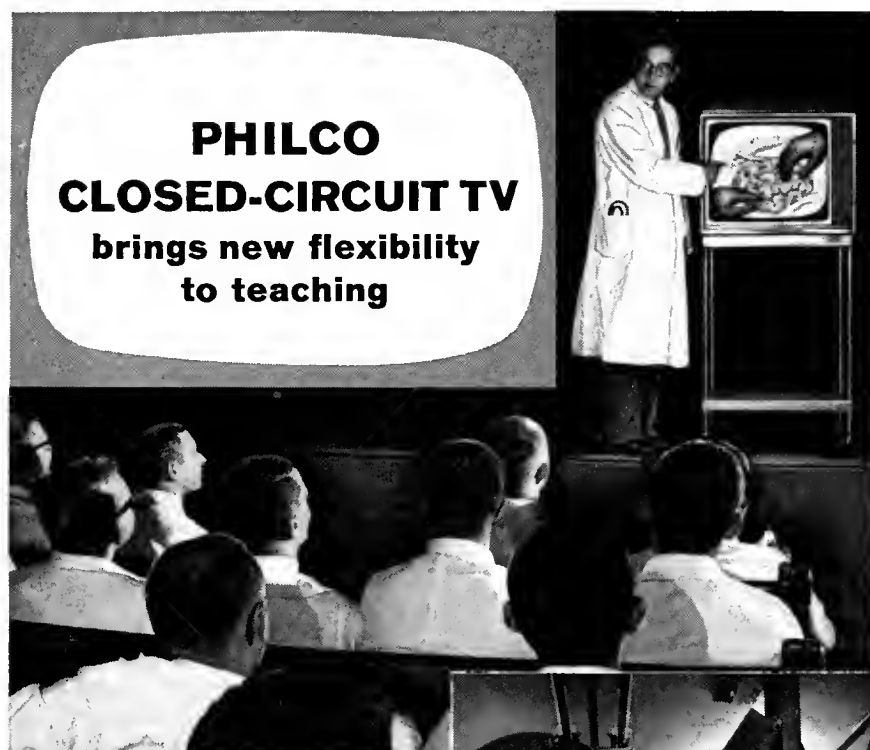

Oh yes, the title is *Playing It Square In The Family*, and it was produced by Christian Education Press, 1505 Race Street, Philadelphia 2, Pa., and comes complete for (I assume) \$7.50. Useful with all sorts of groups, children, youth and adults, and in many contexts.

*Communications to the Church department should be sent direct to the church editor: William S. Hockman, 12 June Drive, Glens Falls, N. Y.*

# FILM EVALUATIONS

by L. C. Larsen and Carolyn Guss

## What's Inside the Earth?

(*Film Associates of California, 11014 Santa Monica Blvd., Los Angeles 25, Calif.*) Produced by Film Associates, 13 minutes, 16mm, sound, color or black and white, 1959. \$135 or \$70. Teacher's guide available.

### Description

*What's Inside the Earth* is a resume of the methods whereby man has acquired a knowledge of the structure and composition of the interior of the earth. Both animation and live action photography are used to help explain the concepts presented.

The film opens with a question concerning what might be found if one were able to drill a hole through the earth to China. Since such a hole is impossible, the narrator suggests a study of some holes which have been made to see whether anything can be learned from them regarding the interior of the earth.

Digging a hole with a hand shovel is first shown, so that the top soil and a bit of the subsoil can be seen. However only a very shallow hole can be dug with a hand shovel. To look into a deeper hole, the film pictures a site where a mechanical shovel is digging a ditch for a water pipe. Here the hole is several feet deep, the top soil, subsoil and a layer of decayed rock are clearly evident.

"What," asks the narrator, "goes deeper?" The next sequence shows a water well on a farm with a windmill pumping water. The layers of earth and rock, through which the well passes, are shown by animation. In this sequence it is established that there are layers of hard rock called strata underlying the layer of decayed rock which was previously shown. The well penetrates many layers of the hard rock to reach the water table.

The well, however, is less than 100 feet deep. To learn more about the earth a deeper hole must be examined so a mine shaft is visited next. Here a lift is seen descending into the mine shaft. Again animation is used to show the many layers of rock which are penetrated by the mine shaft in order to reach the layer of coal. The narrator explains that it is very warm at the bottom of deep mines because of the

temperature increase of several degrees per thousand feet as one penetrates deeper and deeper into the earth. At this point the film presents several scenes showing coal mining operations. It is pointed out that the deepest that man has penetrated the earth is to the bottom of our deepest mine shafts, a few hundred feet deep.

Although man has not been deeper than mines, he has sent tools down much deeper, as the next sequence shows. The drilling platform of an oil well is next shown. Animation is used to picture the underlying strata through which the well passes to reach the oil bearing formation which may be as much as 20,000 feet beneath the surface of the earth. From the materials taken from such oil wells, man has learned much about the earth's structure.

Nature has, in effect, made available much deeper holes for study: volcanos. Animation is used to show the hot, molten rock more than 200 miles below the surface which is the source of hot lava. The probable cause of volcanos is explained and pictures of the hot, molten lava pouring from the volcano are shown.

Still another way that man has explored the depths of the earth is by study of seismograph records. The film shows a seismograph as it records an earthquake shock. The narrator explains briefly how scientists are able to determine, from the shock waves, the structure and probable composition of the interior of the earth. The cause of earthquakes is shown and the resulting shock waves traced as they radiate out to be picked up by seismographs over the earth.

Animation is used in the next scenes to show the crust, mantle, and core of the earth as determined by seismological investigations. The structure and composition of the crust is explained as it is shown by diagram. Next, the mantle is described in detail and its structure, composition and temperature are indicated. The core is indicated as consisting of two distinct layers. Each of these is discussed briefly, and the narrator alludes to the methods of determining the composition and structure of the core.

The film then reviews the various ways by which man has been able to

increase his knowledge of the earth. It is emphasized, however, that exploration of the structure of the earth has barely begun. The film ends as the narrator suggests that many of the boys and girls seeing the film may some day contribute to our knowledge of what's inside the earth.

### Appraisal

The preview committee rated this film as above average. The photography, animation and diagrams are of superior quality. The vocabulary and visuals are of such a level and so clearly presented that elementary children should fully comprehend a large portion of the content. Some of the concepts alluded to, however suggest areas of further study even for the high school student. The upper elementary and junior high general or earth science classes will derive the greatest benefit from the film. The teacher will find it extremely helpful in explaining concepts relating to the structure of the earth, faulting, earthquakes and volcanos.

—Donald Nicholas

## Wilderness Alps of Stehekin

(*Sierra Club, 1050 Mills Tower, San Francisco 4, Calif.*) 29 minutes, 16mm, sound, color, no date. \$175.

### Description

With spectacular alpine vistas and warm glimpses of human interest close-ups found only in unspoiled natural settings, plus organ and choral music, *Wilderness Alps of Stehekin* makes a plea for leaving some of our natural scenic heritage untouched by human influences. The narrator is a father taking his two pre-teen sons on a trip of discovery through the Stehekin range of the Cascade mountains in northwestern Washington.

Reviewing those portions of our natural heritage already preserved, the film visits Mount Rainier, the rain forest of the Olympic Mountains, Yosemite, the Grand Canyon, Dinosaur Echo Park, and Monument Valley. While tracing the history and need for wilderness preservation, the theme mentioned in the opening scenes is

being continually reinforced:

*"The wild shining sea shaping the earth through the ages, never the same, yet not to be changed by man, who long ago learned to accept it for what it is—even as we now are learning not to change some of the wild land, but to keep it natural, to seek from it answers to questions we may yet learn to ask."*

After pointing out some of the scars left on the fringes of the Stehekin area by man's past exploitation, the boys and their father begin the boat trip up Lake Chelan on the excursion boat "Lady of the Lake" passing 1,500 foot cliffs and mountains over 9,000 feet high on their way to Stehekin Landing. From this point easy trails lead to many scenic points; the landing is also the lower end of a primitive road that connects with no highways, on which its few cars "know each other by their first names."

At the road's end the boys and their father meet Chuck and Mariam Hesse who have lived in, explored and photographed this country. Among the scenes they have witnessed is the cloud cap on Glacier Peak, the lenticular cloud that through time-lapse photography is seen to spin about the top of the mountain as the wind blows through it and creates the illusion of a giant top whirling on a pedestal. Mountain goats, ptarmigans and the cycle of the seasons have all been photographed by the Hesseys.

Again the boys resume their hike through the mountains. Caught in a sudden mountain shower they walk through a sheltered valley, and the father re-discovers what the boys already know ". . . that the rains bring out new patterns and freshness," and he observes that while they got wet, "We never came back wishing we hadn't gone out, and . . . feeling only half alive . . . the boys knew it all the time, that epidermis is waterproof! . . . that strange tingling! . . . that was my circulation circulating. I had almost forgotten the feeling."

In closing, the plea is made again for keeping unspoiled the areas where our children and theirs can rediscover the wilderness "that the ages have made perfect."

**Appraisal**

*Wilderness Alps of Stehekin* is a beautiful and moving filmic essay on the aesthetic values that are found in unspoiled nature. The plea for preservation of the few remaining such places is forcefully delivered. There is an unmistakable identification available to most audiences either in the three children, the fathers or those on the Sierra Club hike.

The original organ music by Clair Leonard used during the opening views of scenic grandeur and the children's choir backgrounding the hiking sequences with such tunes as the "Happy Wanderer" reinforced the intended mood.

The only objection raised by the committee was directed at the heavy emphasis on the need for preservation of wilderness at the film's beginning. The message at the end was felt to come across more effectively since the viewers have then traveled through mountains and meadows and have observed unspoiled nature. Then, with this filmed experience as a background, the need for action in preservation becomes apparent.

Scouting groups, conservation and other outdoor clubs would find this film a stimulating experience. Junior and senior high school classes and adult groups studying conservation and recreation problems might use this film either to develop an appreciation of untouched nature or to serve as a stimulus to a study and discussion of the problems entailed in the establishment of primitive recreational areas.

—Richard Gilkey

## Now—Question and Answer language teaching with new Bell & Howell 2-channel recorder!

This new language recorder enables a teacher to record translation "questions" on one channel of the tape. The student listens, and records his "answers" on the second channel. When the lesson is completed, the teacher and student can listen to both channels simultaneously for critical comparison. Student can re-record as often as necessary to master the lesson. Tape can be re-used

indefinitely by any number of students. Accidental erasure of "question" channel is prevented by concealed switch. This recorder is the basic unit for any language lab. It serves equally well for speech, drama and music instruction. Compact, portable design, traditional quality. Mail coupon today for more complete information.

### **DOUBLE** the value of Language-Teaching Films!

This Bell & Howell movie projector lets you put a sound track on any 16mm film, sound or silent! Show a foreign language film, then show it again with English translation. Add foreign language commentary to silent films. The Filmosound 302 Magnetic Recording Projector lets you back up, erase, re-record as often as you like. Famous Bell & Howell quality assures finest performance in all 16mm projector uses.

*the first in a dramatic new  
series on the world's religions!*

## THE CRESCENT and the CROSS

A Film on the Religion of ISLAM

An unusually objective treatment of Islam filmed with the cooperation of Middle East Governments and the authoritative counsel of J. Christy Wilson, Dean of Field Service, Princeton Theological Seminary. Against a backdrop of ancient religions in the land of the Pharaohs two young Americans learn about Islam which burst from its desert birthplace to spread like wildfire thru Africa, Asia and Europe. Actual on-location scenes, *filmed in the heart of today's Middle-East*, presents with pictorial eloquence history, travel and religion.

*Filmed in the Middle East in Exotic color*

*Even in classrooms sunshine bright...*

## AO's NEW OVERHEAD DELINEASCOPE

*gives the clearest image you've ever seen!*

This revolutionary new overhead projector, by American Optical Company, was developed around a powerful 1000 watt light source to give you the brightest... biggest projected screen image you've ever seen. Even the extreme corners are sharp and clear because a specially designed Fresnel lens affords perfectly balanced illumination to every square inch of screen area.

This precision teaching instrument will project all the line, form and color of a 10" x 10" transparency up to a huge 177 sq. ft. screen image... in crisp, accurate detail.

You'll enjoy using this instrument because you face your class at all times... observe every movement and expression of subject reception and understanding.

AO's Overhead Delineascope helps give your program an unlimited flexibility that is not possible with any other AV medium. You can emphasize or dramatize by adding to your prepared teaching material on-the-spot.

You'll want to see all the new, exclusive features that make this instrument a practical investment in creative teaching. Your AO Salesman or Audio-Visual Dealer will be happy to arrange a demonstration at your convenience.

JOHN BROWNLEE teaching with NORELCO Tape Recorder: The world-famous Australian baritone, beloved "Don Giovanni" of the 1930's and 40's and now Director of the MANHATTAN SCHOOL OF MUSIC, tape records with his NORELCO "Continental" a difficult passage sung by pretty student JUDITH INGRAM. Afterwards MR. BROWNLEE played back this section of the tape to show his pupil precisely what needed further vocal polishing. "A high-quality tape recorder enables the teacher to let his pupils hear themselves as others hear them," says MR. BROWNLEE. "I find my NORELCO 'Continental' three-speed tape recorder an extremely versatile teaching tool, especially as it is capable of outstanding faithful, undistorted reproduction of vocal and instrumental timbres." The NORELCO "Continental" is a product of North American Philips Co., Inc., High Fidelity Products Division, Dept. 1S9, 230 Duffy Avenue, Hicksville, Long Island, N. Y.

The KEYSTONE Standard Overhead Projector  
is available for purchase under the

## National Defense Education Act

The Keystone Standard Overhead Projector is designed for the projection of Standard (3 1/4" x 4") Lantern Slides, Polaroid Slides, and Handmade Lantern Slides or, with appropriate accessories Tachistoslides (4" x 7"), 2" or 2 1/4" Slides, Strip Film, and Microscopic Slides.

It is useful —

In the Science Category with appropriate units of slides in Physics, Biology, General Science, Health, Hygiene, Physiology, and Elementary Science.

In the Mathematics Category in teaching Number-Combinations and Fraction-Combinations tachistoscopically; Solid Geometry with Stereograms.

In the Modern Languages Category in teaching French, Spanish, German and Russian with Tachistoscopic Units.

# RCA PRESENTS THE "PRECEPTOR" SYSTEM

*... world's most advanced  
language laboratory equipment!*

This is the RCA "Preceptor"—an exciting new concept in language laboratories. Most advanced because it opens fresh new avenues for creative teaching . . . most advanced because it gives the teacher full control of the laboratory. Most advanced, too, because it's *transistorized* and because its *modular design* simplifies installation and makes expansion easy.

Transistors add many extra advantages to RCA's new "Preceptor" System—providing instant action, longer life, simpler wiring, and lower operating costs. These are but a few of the superior features RCA sound engineers have designed into the "Preceptor" to make it the world's most advanced and most wanted language laboratory system.

Write for complete information package explaining how RCA "Preceptor" System can vitalize your language curriculum. Also, ask for the name of your nearest RCA Language Laboratory Dealer: Address: Radio Corporation of America, Language Laboratory Sales, Building 15-1, Camden 2, N.J.

The RCA "Preceptor" console (above) with its master control panel puts the teacher in complete command. It allows: 1) monitoring of any student; 2) listening in on master tape and student's voice; 3) two-way conversation with any student; 4) recording of student on central tape recorder; 5) insertion of comments on the recording; 6) communication with whole class through "all-call" control. The teacher controls tape selection and can play up to 10 different tapes.

Sturdy RCA "Preceptor" booths can be installed singly, with or without flip-top desk to serve as writing surface, or in modules of two or three attractive economy booths.

**World's Most Advanced  
Components . . . from RCA!**

Expansion? Just add a pre-wired SelectorCom panel with a bank of 10 selector switches.

RCA tape decks for the "Preceptor" System may be either half-track, or dual-track. Single-knob control makes them ideally simple to operate at the console or in student booths, as a program source or for student recording. Convenient new cartridge type tape decks are also available.

## TFC Aids DAVI Field Program

Teaching Films Custodians, Inc., educational services subsidiary of The Motion Picture Association of America, picked up a \$1,500 tab for four audiovisual education surveys in the 1958-59 school year, and has upped the budget to \$1,600 for the current school year. Last year's surveys were made in the Fairfax County (Va.) schools; Miami University, Oxford, Ohio; Rutgers State University of New Jersey; and Nebraska Wesleyan University. Among those in 1960 is one to be made in the St. Louis (Mo.) county schools.

Altogether, since 1955, these surveys, under direction of the Field Services Committee of the Department of Audiovisual Instruction, N.E.A., have been made in two city and two county school systems and in seven colleges and universities.

The TFC supports also an annual top level audiovisual "brainstorming" session at Lake Okoboji grounds of the State University of Iowa, covering all costs of the meeting except travel and salaries of those invited by DAVI to attend.

Teaching Films Custodians, Inc., is the agency through which motion pictures originally produced for theatre entertainment and then found suitable by authoritative educators for classroom use are made available to schools by the motion picture industry.

## Back to the Peep Show

Thomas A. Edison never thought much of showing movies to a mass audience. He preferred the peep-show, where you put your penny in the slot to enter briefly a flickering world all your very own. Hundreds of thousands of children today enjoy that type of show when they turn the cardboard wheels of their "Viewmaster"—a succession of 16mm frames now adapted to educational uses by Sawyer's, and, primarily to religious purposes, by Glenn McMurray.

Encyclopaedia Britannica Films joins the trend with its so-called "shortstrips" (35mm filmstrips, each 14 frames in length, a dozen to the set). Film and Slide Lab of Toronto have been featuring approximately this length for some time, but in "Hymnslips" intended for group projection, with each hymn a unit. A dozen EBF "shortstrips, with one plastic hand-viewer, are priced at \$19.90; additional strips at \$1.66 each; additional viewers at \$1.00 each.

## New Job for Gen. Medaris

Major General John B. Medaris, retiring from the U. S. Army 37 years' active service, has been elected chairman of the board of Electronics Teaching Laboratories of Washington, D. C., makers of Monitor language laboratories. Gen. Medaris directed all of the army's missile and space programs.

# NEWLY REVISED!

## "HOW TO MAKE GOOD TAPE RECORDINGS"

by C. J. LeBel, Vice Pres., Audio Devices, Inc.

This completely revised handbook of tape recording contains up-to-the-minute information of practical value to every tape recordist. Profusely illustrated with photographs, charts and diagrams, it contains 150 fact-filled pages.

"How To Make Good Tape Recordings" can be read and easily understood from cover to cover by an amateur recordist. Yet it contains a wealth of practical information that makes it a valuable aid to experienced teachers and musicians.

Available either cloth-bound, or paper-bound. Get a copy from your Audiotape dealer or order direct from Audio Devices, Inc.

Donald Ickes, AV director at New Trier, laminates illustrated football plays for the athletic department.

### Laminator for AV Dept.

A new laminating machine is one of the features of the remodeled audiovisual department of New Trier high school in Winnetka, Ill.

The unit is the "Ply-On," manufactured by American Photocopy Equipment Company, Evanston, Ill. It is utilized by the entire school, with material channeled through Donald Ickes, audiovisual director. He plans to set up a regular schedule of laminating services for each of New Trier's departments, along with other services that will be offered at this central location.

Current applications for the laminator include passes, signs, important records, diagrams—both academic and for use by athletic teams—also sheet music and library uses such as book jackets.

### Filmstrip Standards Finalized

A committee headed by Robert H. Larson, chief engineer of Dukane Corporation's audiovisual division, has submitted a final report on technical specifications for filmstrips which states: "The filmstrip (or slide film) with or without accompanying sound has become such an important media of communication with users spread throughout industry, commerce, religion and education that it is imperative that the arrangement of the filmstrip be standardized so that all confusion is elimi-

nated in the actual utilization of the media."

These specifications provide that, following a square cut midway between two sprocket holes, the first three frames carry the word "Start" in light letters against a darker background, and that a white dot not less than 1/8 in. in diameter appear in the upper left-hand corner of each of these "Start" frames. The next four frames are for title and other identification data, "preferably parallel to the film edge."

The tenth ("Focus") frame is to carry a simple design pattern "so that the projected picture can be accurately located and sharply focused on the screen," and if a sound medium accompanies the strip this focus frame is also to carry definite instructions to the operator as to the proper frame on which to start the sound. The eleventh frame carries the first main title, intended to be seen by the audience.

As a precaution against scratching, the final frame (usually "The End" title) is to be followed by a length of film "at least equal to the circumference of the container in which it will be stored." The two last frames in this tailpiece are to bear the word "End" in light letters on dark background; in the case of color films, white letters on red background.

Members of Mr. Larson's technical committee included Robert S. Throop, William H. Smith, William F. Kruse, H. S. Van Deren, Jr., Eric Bender, and Walter Johnson.

### People

Thomas Stuart Masterson has been appointed director of photography at Stanford University. He has been director of the Visual Aids Department of the UCLA medical center. His post as vice president of the Southern California chapter of the Biological Photographic Association will be filled by Maurice LeCover, director of visual arts, Cedars of Lebanon Hospital, Los Angeles, Calif.

Dr. William C. Leone has been named vice-president and general manager of Rheem Califone Corporation. Dr. Leone was with Hughes Aircraft since 1953 and for seven years was on the faculty of Carnegie Institute of Technology.

# Is he learning...

*or just being entertained?*

*He's learning...* if the classroom audio-visual equipment is designed, as only Bell & Howell equipment is, to be an active educational aid rather than a medium of entertainment. The full benefits of teaching with audio-visuals can be achieved only through built-in features and controls that make the teacher the *complete master* of the lesson rather than a by-stander. Only Bell & Howell gives these to you, along with unmatched ease of operation.

The school administrator gets the assurance of long, trouble-free equipment operation, and the certainty that the school has

gotten the best value for money. Program assistance service is provided by an experienced Bell & Howell Audio-Visual Representative in your area.

If you're going to specify audio-visual equipment soon, if you're interested in the added teaching power audio-visuals can give your school... write today. There's no obligation. Write: U.S. Education Dept., Bell & Howell, 7117 McCormick Rd., Chicago, Ill.

*Qualifies for purchase under Public Law 864. (National Defense Education Act).*

**399AV.** Stops on single scene for class discussion. Reverses instantly, lets you repeat scenes until they are clearly understood.

**Filmosound 302.** Add high-fidelity magnetic sound to any 16mm film, automatically. Doubles the value of language teaching film.

**786AV-1.** 2-Channel Tape Recorder. Teacher records lesson on one channel. Student listens, records answers on second channel.

**724 Slide and Filmstrip Projector.** Simple instructions on projector. Projects even in semi-lighted room to permit note-taking.

FINER PRODUCTS THROUGH IMAGINATION

**11:00 A. M.**

**This movie is really sharp! Not a light leak anywhere.**

REASON: The windows in this room are light-controlled with Flexalum Audio-Visual Blinds. These blinds make any room theatre-dark anytime. Here's why: (1) more slats per height plus (2) patented notch in each slat that permits adjacent slats to touch, equals (3) no between-slat light leaks. (4) Light-trap channels eliminate around-the-edge light leaks.

**11:10 A. M.**

**The slides look great. Just enough light to take notes.**

REASON: You get just the degree of light control you need with Flexalum Audio-Visual Blinds. No other form of blackout covering allows you this flexibility. And Flexalum Audio-Visual Blinds will always stop and stay just where you want them. They're precision engineered to operate smoothly. They're guaranteed for five full years.

**11:20 A. M.**

**Back to groupwork. Full daylight, instantly—no glare.**

REASON: Nothing to take down, nothing to tug back. No wasted money for multiple coverings, no wasted classroom minutes. Flexalum Audio-Visual Blinds do the whole job — taking you from projection darkness to full light (or anything in between) with just a flick of a nylon cord. The plastic lined side channels eliminate all noisy flutter!

**Get full-range light control—at low cost—with *Flexalum*® Audio-Visual Blinds!**

Bridgeport Brass Co., Hunter Douglas Division, 30 Grand St., Bridgeport 2, Conn.

## Wisconsin College Gives Master's in AV

Now under way at Stout State College, Menomonie, Wisc., is the only master of science degree program in audiovisual instruction at any college in the state.

To obtain the new master's degree in audiovisual instruction, graduate students, after having taught a minimum of one year, are required to enroll in three basic courses: research procedures, applied research, and educational statistics. These students are also required to obtain a minimum of eight semester hours and/or a maximum of 15 semester hours from a list of 20 recommended graduate courses.

For example, students may select advanced photography, audiovisual administration, applied electronics, motion picture production, to name a few subjects, as well as more general courses in curriculum, conference leading, psychology of learning, supervision, and administration.

Upon completion of Stout's \$925,000 shop-laboratory-classroom building now under construction, the audiovisual center will move to enlarged, renovated quarters in space now occupied by the Stout printing department.

Officials of the college foresee considerable interest in the course.

## Australia Library Has Large Film Archives

The Commonwealth National Library at Canberra, charged "with the responsibility of collecting and preserving Australian historical records," has a film division which has published a catalog of 1,537 documentary and educational motion pictures from 388 Australian producers and sponsors, some 800 of which are already in the national library's film collection.

According to its preface, "this catalogue is only part of the film division's project to compile a complete record of Australian film production and, wherever possible, to obtain prints of all significant films for deposit in its historical film collection." Feature films are omitted from the catalog although efforts are being made to acquire copies of early productions of this type.

## Eugene W. Castle

1897-1960

"Gene" Castle, one of the most dynamic figures in the non-theatrical film field, was best known as founder of the film line that still carries his name. The company was started in 1924 with a reported investment of \$10,000. By 1947, when it was sold

## Cover Scene

A glimpse of the activities of a 6th grade class during a week at school camp. Chaparral Classroom is a 19-minute color film produced by Los Angeles City Schools and distributed by Bailey Films, Inc.

to Universal Pictures, Castle Film had grossed \$130,000,000.

After disposing of his holdings, Castle spent much of his time travel and in campaigning against what he considered misuse of government funds in foreign aid and miscellaneous propaganda efforts. His death after surgery, came on Feb. 9 in New York City. His only immediate survivor is his wife, Mildred Kuhnhe Castle.

## Chicago Teachers Get TV Science Instruction

The Chicago Public School system has entered another term, its fourth semester of instructional programs for teachers over WGN-TV in Chicago.

The Monday through Friday programs, extending from February through May, are titled "Science Our World Today" and are devoted to improving instruction in science in the elementary grades. Previous series have been devoted to improving instruction in reading, arithmetic and social science. Teachers watch the programs on television receivers installed in Chicago area schools.

The new science series brings television many of the outstanding scientists and engineers in this area. All facets of the science curriculum are covered by specialists in their respective fields.

## AV Director Lectures at Journalism Meeting

Carl B. Manner, director of the audiovisual department of the Vallejo, Calif. for Vallejo Unified School District spoke at the California Collegiate Press Conference March 11, 12 at San Francisco State College.

Also speaking were George Leonard, San Francisco editor of *Look* magazine and Jack Fields, San Francisco freelance photographer, who explored the nature of photo-journalism.

Manner gave a lecture-demonstration of the Polaroid Land camera.  
(Continued on page 216)

Three faculty members with prominent roles in the establishment of the master's program in AV instruction at Stout State College: (from left) Dr. Ray A. Wigen, dean of graduate studies; Silas S. Stamper, assistant professor of audiovisual education; Dr. David P. Barnard, professor and head of the audiovisual department.

# HOW TO TEACH MORE EFFECTIVELY WITH AN OVERHEAD TRANSPARENCY PROJECTOR

*An important visual aids primer -- clip and save it*

As a person who uses and is often called upon to advise in the selection of visual aids equipment, it is essential that you become familiar with the many advantages of overhead projection techniques—how it can make your teaching even more effective, how it helps the student to grasp and to retain ideas, how it increases the scope of your subject matter.

For many teachers the prime advantage of the overhead transparency projector is the fact that it is the only type of projection equipment that is designed to be operated in broad daylight. The ordinary classroom becomes a theater without turning out the lights or drawing the shades. Of course, you must have a projector that provides the maximum screen light required to retain detail and color. Projection Optics' Transpaque Jr., for instance, provides up to three times more light on the screen than any other projector of its type. Transpaque Jr.'s exclusive optical system has completely eliminated a serious overhead projection problem — the distracting rings that have always appeared on the screen.

## Up-Front Projection

With this teaching tool, both you and the projector are at the head of the class. As you teach, you face your students. You can gauge their reactions, spot questions immediately; students can take notes and you can refer to yours. Remember, the lights are on! In short, with the Transpaque Jr. you retain all the advantages of a classroom environment.

The very small profile of Transpaque Jr., especially the projection

head, makes every seat usable. There is nothing obstructing your view of the class. Every student is able to see both you and the screen. The more compact Transpaque Jr. is also easily portable.

Superimpose transparency over transparency, building a progressive story before the eyes of your class. Transpaque Jr. retains the brilliance

and color even through multi-colored overlays. Each transparency has a large 10" x 10" format. You can tailor-make them yourself, simply and inexpensively. You can buy them already prepared, covering a multitude of subjects.

## Write As You Speak

To create large screen images of your notes or ideas, just write in your normal size script on a transparency. It is projected as you write,

just behind you on the screen. You can draw lines, write clarifying remarks, circle areas of special interest. Your individual technique is as unlimited as your own imagination. There is no squeaky chalk or tiresome blackboard work. Use the roll of transparent film. Write on it and roll it away for a continuous supply of clean writing surface.

Transpaque Jr. is UL-CSA approved. It is easy to operate and trouble-free. For a free demonstration or additional information, write to

**Projection Optics Co., Inc.**  
276 Eleventh Avenue  
East Orange, New Jersey

In Canada, Anglophoto, Ltd., 880 Champagne Ave., Montreal, Quebec.

pointing up its adaptability to photo-journalism. The conference was attended by more than 300 student editors from four-year and junior colleges throughout the state.

## Israel Education Leader Is U. S. Visitor

A recent visitor to the offices of the American Council on Audio-Visual Education in Israel was Dr. Noah Nardi, director of the Pedagogic Center of the Ministry of Education and Culture in Israel. Dr. Nardi is engaged in a project with the Jewish Education Committee in New York and plans to visit school systems as he travels across the United States before returning to Israel.

## Ford Foundation Grant For Radio Exchange

The Ford Foundation has announced a grant of \$500,000 to expand the exchange of educational and cultural radio programs between the United States and countries throughout the world.

Under the grant, the Broadcasting Foundation of America (B.F.A.) will integrate all its operations with the National Educational Television and Radio Center's (N.E.T.R.C.) new International Exchange division.

Since the Ford Foundation granted it \$200,000 in 1958, B.F.A. has expanded; it now supplies about 18 hours of cultural, musical, and educational programs weekly from radio stations in 40 foreign countries to more than 200 American commercial and educational radio stations.

## Letters

To the Editor:

Your October, 1959, issue has again come to our attention and I think warrants comment, even at this late date.

It should be very gratifying to you to find that your publication is followed so avidly. Unfortunately we are finding it embarrassing. The article "Criteria for AV Equipment" by Philip Fayen contains several implications which we do not believe are justified.

Mr. Fayen asks the question, "Does the projector have a rating of 350-500 watts?" A 300-watt projector with a good optical system could conceivably put more light on the screen than a 500-watt projector with a poor one. Wattage is not necessarily a measure of a projector.

Mr. Fayen asks that 10 foot lamberts be registered on a light meter focused on the screen. This is a rating applied to movie projection. The ASA standards for still projection suggest 5 foot lamberts instead of 10. The

whole discussion is rather out of place under a projection test because it is more a test of a screen than a projector.

Under "Tape Recorder," Mr. Fayen asks "Does the amplifier have a power rating of 10 watts, or at least 7 watts as absolute minimum?" Although wattage is a factor in amplifier performance it is not the whole story, and Mr. Fayen's implication that 7 watts should be considered a minimum is extremely misleading.

Mr. Fayen asks "Is this a four track or a two track recorder?," implying that it should be one or the other. With the possible exception of use as a play-back machine in music appreciation courses, it is hard to think of any use for either machine. The problems of stereo recording are such that the usage will probably not occur in academic circles, and the cost of such equipment would not be justified.

Leonard W. Coulson  
LaBelle Industries, Inc.

(1) Light output today cannot be measured in lamp wattage, true. (2) Comparative screen brightness is a fair gauge if rival machines are tested on the same screen. (3) Wattage output (re distortion factor) is an acceptable yardstick in selecting an amplifier for the job it will be asked to do. (4) Dual track recorders have other educational applications besides stereo music.

Mr. Coulson's comments re "speaking around" will be run next month.—Ed.

Cooper, audiovisual director, Idaho State College.

# American History . . . .

# at its brilliant best

presented in an unusual program of filmstrips and books carefully planned and developed by top-ranking specialists for use at all levels. Never before has a program embodied such excellence. COMPARE these teaching tools with any others in their field for AUTHENTICITY, DEPENDABILITY, QUALITY and UTILITY, then realize that they are, in fact, UNIQUE among the best that America has produced.

## THE FILMSTRIPS

Created under the editorial direction of RALPH H. GABRIEL  
Sterling Professor of History Emeritus, Yale University

### ● THE CHRONICLES OF AMERICA FILMSTRIPS, 15 units

Inspired by the famous CHRONICLES OF AMERICA volumes and based largely on the celebrated motion pictures of the same name, these amazingly realistic filmstrips re-create, with minute historical accuracy, important milestones in the early formative years of our national life. Only recently completed, the series is already winning acclaim across the nation.

\$97.50 complete or \$7.00 each  
Comprehensive TEACHER'S GUIDE free

### ● THE PAGEANT OF AMERICA FILMSTRIPS, 30 units

Epic in scope, this accurate and authoritative award-winning series covers five centuries of America's growth from the aboriginal Indian to our Atomic Age and has proved to be an invaluable teaching instrument in nearly every phase of the curriculum. A natural supplement to THE PAGEANT OF AMERICA volumes, the series is widely and successfully used as a source of indispensable information.

\$195.00 complete or \$7.00 each  
TEACHER'S GUIDE free with each unit

## THE BOOKS

### ● THE CHRONICLES OF AMERICA, 56 volumes

Edited by Allen Johnson and Allan Nevins

Full-bodied, timeless narratives, written with authority by eminent specialists in persuasive, interest-compelling style, tell the full story of America from the Red Man to the aftermath of World War II. Especially distinguished for a freshness and originality of treatment, here is authentic history with all the exciting appeal of good fiction.

\$199.00 complete or \$3.95 per volume

### ● THE PAGEANT OF AMERICA, 15 volumes

Edited by Ralph H. Gabriel

This magnificent pictorial history, packed with accurate, useful, well-organized information—expressed in terms of human interest and enjoyment—reveals the vast panorama of America's progress through 11,500 authentic historical illustrations expertly linked by scholarly text. A basic essential for every school and library.

# Cliché Blocks To Progress

*Paul C. Reed*

We doubt that there's an audiovisual administrator anywhere who hasn't at one time or another been frustrated by the cliché block of his "superior." You know that kind of boss man who says to you, "Your proposed idea cannot be used because 'We tried it once, and it doesn't work.'" Or, "There isn't enough money." Or, "The people aren't ready for an idea like that." Or, "We just don't do things that way." In a recent talk, Dr. Don Williams of the University of Kansas City, listed a whole file catalog of such clichés and discussed them as major blocks to progress.

Certainly it's a trying and baffling situation when an AV director's plans and ideas are turned down for such reasons. But it's even much worse when he blocks his own progress by that same kind of exclusive reasoning. Take the case of the Director of Instructional Materials in Northeast City, for example.

He thought he had an insoluble problem in the distribution of filmstrips. His own cliché block to reasonable action was the notion "You have to treat all schools alike." Or he sometimes told himself, "What you do for one school in the system, you have to do for all." Who said so, and upon what authority? Maybe like schools should be treated alike, but schools aren't alike just because they're in the same school system. This Director had trapped himself and blocked his own program. But let's be more specific.

There was a good centralized film library and motion picture distribution system in Northeast City. When filmstrips began to be available in quantity and quality, it was simple enough, and logical too, to add these to the existing film distribution system. Filmstrips being much cheaper than motion pictures, you could even buy five or six copies to serve Northeast's fifty-some schools. But the economics of this method of distribution bothered the director.

True, a filmstrip cost only a few dollars, but in a few years it would cost several times that to distribute it. Each one had to be listed, and ordered, and delivered, and picked up, and inspected, and shelved over and over again while distribution costs mounted. On the other hand, if Northeast Director were to have to buy fifty copies of one filmstrip title, his current budget would be nowhere near adequate.

The clue that permitted him to break free from his cliché created block came when he was reviewing the statistics of filmstrip usage. The figures made clear that all schools were *not* alike. The top school had used more than three times as many filmstrips as the school at the bottom of the list. Maybe filmstrips collections should be provided for *some* schools, and not for all, at least not all at once. Why not start decentralized collections for those schools that made most use of filmstrips? Five schools first. Five more next year. Then half the schools had their own filmstrip libraries. If you are going to serve schools best, maybe they should never all be treated alike. The solution for one school is not the solution for all schools.

There was another fallacy Northeast Director discovered in his thinking about filmstrips. When he really thought the problem through, he knew that in terms of unit cost, methods of use, and the way they should be distributed, filmstrips were much more like books than like motion pictures. One of these days in Northeast City, those individual school collections will become decentralized, and there'll be filmstrips in every classroom just as there should be.

*At the Blue Island, Illinois, Community High School, District 218, William Liska, Audio-Visual Coordinator says:*

**Our Kodak Pageant Projectors stand up to 160 boy operators, run 5000 showings a year without oiling."**

"Projectors get a severe workout under our heavy audio-visual schedules. Youngsters who run them have varying attitudes about care. So the operating simplicity and ruggedness of a Pageant are important features to us.

"Constant hard usage by so many people would also make it next to impossible to keep up with lubrication and maintenance records. That's why we place such high value on the lubrication-free feature of the Pageant."

Perhaps you would like to see how easy it is to operate this sturdy projector that ends oiling headaches forever. Your Kodak A-V dealer will demonstrate. He'll also show you how the Pageant throws 40% brighter pictures on the screen at sound speed . . . how it fills the hall with distinct *sound that you can control*. Or write today for Bulletin V3-22 that tells you all about Kodak Pageant 16mm Sound Projectors.

# AV Materials In Guidance

by Verne Stockman

Donald Moler

James Lister

**H**AVE audiovisual directors recognized the growing importance of the use of audiovisual materials in the field of guidance? To find an answer to this question, the Audio-Visual Center at Eastern Illinois University surveyed all those guidance directors in the United States whose names appeared in the April, 1958, directory of Local Directors of Guidance published by the U. S. Department of Health, Education, and Welfare. Of the 1,452 directors listed, 791 (54 percent) responded to the inquiry.

Although writers in the fields of audiovisual education and guidance have frequently referred to the use of audiovisual materials in guidance programs, very little has appeared in print dealing specifically with the use of audiovisual materials in the various areas of guidance. With emphasis upon guidance under Title V of the National Defense Education Act, the use of materials in guidance becomes more and more the concern of audiovisual directors.

In this survey of guidance programs, inquiry was made regarding the use of the following audiovisual materials: charts, graphs, posters, motion pictures, bulletin boards, slides, filmstrips, field trips, opaque projectors, tape recorders and overhead projectors.

Group guidance situations accounted for most of the use of audiovisual materials. Group guidance situations in the study were considered to be group-centered guidance activities such as orientation, providing occupational information, and exploratory courses or guidance units taught within academic courses.

The next largest category using audiovisual materials involved community groups and staff members. Included were those activities of a guidance nature which were directed toward presenting guidance information to the community, in-service training of the faculty, and obtaining information from the community which could be used in working with the students. Audiovisual materials were used least in individual counseling situations. This probably is not unusual, considering the nature of the counseling situation. Comparatively few audiovisual materials were used in addition to those listed. Those additional materials most frequently used were television, radio, recordings, flannel boards and photographs. In virtually all cases the additional audiovisual materials were being used in group guidance situations.

---

Photos by Robert C. Wiseman, assistant director, Audio-Visual Center, Eastern Illinois University.

Participants in the survey were asked whether they would like to use additional audiovisual materials. Nearly 60 percent replied in the affirmative. A large majority of these stated they would like to use more motion pictures in guidance. Other materials which participants indicated they would like to use were: filmstrips, tape recorders, slides, television, pre-recorded tapes, opaque projectors, field trips, overhead projectors, 16mm motion picture cameras, flannel boards, sociodramas and radios.

In order to determine the attitudes held by guidance directors toward use of audiovisual materials in their programs, participants were asked to check whether they considered them "very valuable," "valuable," "of limited value" or "of no value." Nearly 90 percent of all participants indicated they considered audiovisual material valuable to their programs. One-tenth of the directors believed them "of limited value" and there were only two "of no value."

Directors who had a wide variety of audiovisual materials *available for use* in their programs tended to give them a high rating. Those who *used* most of the materials available placed a higher value upon them than did those who used few. Those who indicated a desire to use additional materials believed, as would be expected, audiovisual materials to be valuable. Those individuals who listed new or unusual uses of audiovisual materials within their programs tended to consider their value even higher.

Compared with the group rating audiovisual materials of limited value, those rating them highly tended to have more materials available and they tended to use them more extensively. They also indicated a desire to use additional materials and were finding new and unusual uses for audiovisual materials.

Guidance directors were asked "What new or unusual uses are you now making of audiovisual materials?" Comparatively few were exercising this initiative in this vein; only about five percent of the directors reported finding uses which they considered new or unusual. Some of the participants listed uses of the tape, motion pictures, slides and photographs.

An outgrowth of this survey was the formulation of recommendations for more effective use of audiovisual materials in guidance programs. The uses recommended below are taken in part from uses suggested by participants and in other instances uses are suggested which are believed to be of potential value in guidance situations. It is hoped that these will be modified or expanded to meet specific purposes and that they will suggest new applications.

## Motion Pictures

Inexpensive, simple 16mm motion picture cameras (and now 8mm sound cameras and projectors) enable schools to produce their own films. School-produced orientation films are especially valuable in introducing school activities to enter-

Visiting college deans often use the overhead projector to explain the college curriculum and requirements to senior high school students.

The future career of high school students may be developed through the use of attractive bulletin boards.

ing students. One publication lists 50 colleges that have produced their own orientation films. Scenes taken from various college campuses can be helpful to high school students planning to attend college. School-produced films can be used in presenting occupational information, since the 16mm camera enables guidance personnel to take film surveys of community occupations. This information can be presented to classes studying occupations.

Such films may also be valuable in the area of public relations. A film describing school guidance activities can be used in presenting guidance services to parent and community groups. Most audiovisual directors are aware of the many commercial motion pictures available for dealing with problems of school, family and personal adjustment, as well as those designed to present occupational information. Typical classifications of these films are readily available in the various film catalogs. Some examples are Counseling, Personnel Service, Vocational Guidance and Personal Guidance. Guidance directors need help from AV specialists in selecting appropriate films in these areas.

### Bulletin Boards

Bulletin boards have many uses in guidance. Directors (as well as anyone using bulletin boards as a teaching device) should develop a tear sheet file. In this way many articles and other materials of significance can be collected and filed for later use. Bulletin boards can be used to inform students of the present occupations of graduates and former students. Photographs can be displayed, accompanied by a short paragraph describing the individual's work, address, or plans for the future. In the area of occupational information, local help-wanted ads can be displayed under appropriate headings. Occupational descriptions can be presented. Bulletin board displays are effective in publicizing college and career conferences.

Student committees may be encouraged to contribute to bulletin board displays on such topics as manners, dating and family adjustment. Contributions by student cartoonists can add appeal in this area. Bulletin boards provide an excellent means for presenting to the student body the re-

sults of community occupational surveys and follow-up studies. A few carefully selected photographs help to make the survey an interesting and effective bulletin board display.

### Charts, Graphs and Posters

Closely related to bulletin boards is the visual area of charts, graphs and posters. Summaries of community occupational surveys or follow-up studies can be presented graphically for bulletin board display or for use with the overhead or opaque projectors. Colleges can be compared graphically with reference to cost of living, curricula, degrees granted and activities. Occupations can be compared graphically with reference to earnings, training required, and supply and demand of workers. Posters prepared by student committees can be used extensively during orientation to welcome new students. Students should be encouraged to improve their achievement in school subjects by keeping a personal chart on which they record their daily or weekly progress.

### Filmstrips, Slides and Photographs

The use of commercial filmstrips dealing with problems of school, family, personal adjustment and vocational guidance are increasingly available. Sources are readily found in the commercial guides and catalogs. It was recommended by the participants in the survey that, when possible, students, counselors and teachers make their own filmstrips of guidance activities. A tape recorder might be used to produce a tape-recorded narration to accompany school-produced slides and filmstrips.

Viewers may be used by individual students to study filmstrips and slides in the guidance office, home room, library or in the study hall. Files of filmstrips, slides or photographs can be made in connection with follow-up studies of graduates and former students. Photographs and slides might provide a simple way of recording field trips. These materials can then be used to introduce such field trips when they are repeated with other groups. Filmstrips and slides for use in inservice training in the administration and interpretation of group and individual tests can be easily and inexpensively prepared. These ma-

PERCENTAGE OF AUDIO-VISUAL MATERIALS AVAILABLE FOR GUIDANCE PROGRAMS

VALUE RATING OF AUDIO-VISUAL MATERIALS IN THE GUIDANCE PROGRAM\*

\* ACCORDING TO THE NUMBER OF A-V MATERIALS AVAILABLE IN THE REPORTING SCHOOLS

## THE AV DIRECTOR'S RESPONSIBILITY

Most audiovisual directors will find that directors of guidance are willing to learn more about the use of AV materials. This study indicates that one of the important problems facing guidance directors is "lack of time." The audiovisual director can render a real service to the guidance program by offering his services when the director of guidance plans his activities. He may be able, for example, to identify areas in which audiovisual materials can make significant contributions to the guidance program.

Materials provide an excellent way of showing working conditions within the various occupations in the community.

### Field Trips

Guidance directors should be encouraged to prepare students for the field trip and excursion opportunities available to them within their communities. Teachers should be encouraged to point out vocational implications of any field trips taken in connection with their courses. Through the cooperation of school officials and community agencies it is possible to compile a handbook of field trip opportunities such as the excellent handbook prepared for the schools of Dearborn, Michigan. A handbook of this kind enables counselors and teachers to plan more effectively for field trips. It could include, for example:

- a. The name and brief description of the business, factory, or office to be visited.
- b. The location of the place to be visited with specific directions for finding it.
- c. The age and number of students permitted at one visit.
- d. The most desirable hours for visit.
- e. The name, address, and phone number of the person to contact for reservations.

### Tape Recorder

The tape recorder can be used by counselor in improving his interview techniques. Recordings of case conferences can be filed for future reference, and sample interviews and other guidance activities can be recorded. Interviews of former students in on-the-job situations can also be used in occupations classes.

Recorded sociodramas can be catalogued by topics and used in individual counseling and group guidance situations. By omitting solutions, these can also be employed as projective devices. As a part of an in-service training program for counselors, tape recorded counseling interviews can be exchanged so that various techniques can be reviewed by several counselors in large school systems.

Tape recordings can be made of music and/or narration to accompany slides, filmstrips or motion pictures. Commercial radio or television programs with guidance significance can be recorded for later use with individuals or groups. Field trip interviews can be recorded and used to introduce such field trips when they are repeated.

### The Opaque Projector

The opaque projector was used in a limited fashion by the participants in this survey. It can be helpful in presenting occupational literature to groups when limited copies prevent group distribution of the available material. In school board and community meetings, the opaque projector may be used in presenting data on guidance services. It can also be used to facilitate the interpretation of test profiles to teachers, parents, and students, and projection of cumulative records will enable group evaluation of available data.

The opaque can be used in presenting course descriptions, schedules, and samples of students' work on parents' night. In presenting materials designed for instructing teachers and counselors in the administration and scoring of tests in in-service training situations, the opaque projector is time saving and helps to give common understanding. It can be used, too, in presenting summarized data on occupational surveys and follow-up studies.

### The Overhead Transparency Projector

The overhead projector was the least used by participants of any of the audiovisual materials listed in the survey. In order to enable guidance directors to utilize the overhead projector more fully the following uses are suggested:

- a. The overhead can be used to present guidance information in school board meetings in a dramatic way.
- b. It can be used in presenting summarized data on occupations or follow-up studies in occupations classes.
- c. It will help to facilitate the administration of group tests by using prepared overlays.
- d. Projecting prepared overlays can help in the registration and orientation process.

In comments volunteered by the participants, several individuals indicated that their immediate concern was not the use of additional materials but more effective utilization of those audiovisual materials currently available to them. When asked how they would rate audiovisual materials in their programs, many qualified their answers with such statements as "in certain situations," "if properly used," or "it depends." These qualifications indicate that guidance directors do realize that the value of such materials depends to a large extent upon their proper utilization.

# Tapes Meet Multiple Class

## Needs in Small Schools

by Melvin C. Carpenter

**T**HE Catskill Area Project in Small School Design, now enlisting 27 school districts on the northwest watershed of the Catskills, was launched in 1957, supported by a grant from the Fund for the Advancement of Education. The project's purpose is to search for educational theories, techniques and practices that will help rural schools improve the variety and quality of educational opportunity provided for girls and boys.

Several study groups, consisting of teachers and administrators (including district superintendents) from the participating schools, are constantly at work, trying out new techniques and approaches, refining old ones, pooling and sharing their experiences. Among these study groups is one concerned with multiple class operation. Its members are searching for ways and means to provide more effective teaching-learning situations in multiple classes—where two or more levels of the same high school subject are studied or where two or more separate high school subjects are studied in the same room at the same time with the same teacher.

The purpose behind this experimenting is to find out if multiple classes can be as effective at the high school level as they are in the lower

grades. If experimentation shows positive results then multiple classes may be a means where small schools, with their small staffs, can provide more courses and higher calibre learning.

Consistent, carefully planned use of electronic equipment, especially of tape recordings and recorders, appears to be one likely cue to successful multiple class operation.

At Franklin Central School, for example, L. Verne Thomas has used tape recordings in his multiple mathematics classes for several years. Tapes he cuts himself, together with comprehensive "Learner Guides" he has developed, accompany as well as supplement textbooks his pupils use, provide the essential learning materials and directives. These are used by the pupils in three separate classes that meet regularly with Mr. Thomas in the same room during the same period to study advanced mathematics, trigonometry and intermediate algebra.

Each of these "classes" works in its own section of the room. Each is equipped with Learner Guides, textbooks, tape recorders and tapes he has cut. These carry explanations and instructions. Fast learners proceed at their own best speeds; slower learners "rehear" the tapes to the point of mastery. The teacher therefore is not obliged to devote so much time to slower learners—the tapes he has cut do this for him.

Reprinted from *New York State Education*

Mrs. Margaret Law, teacher of foreign languages in the Central School, Franklin, N. Y., uses commercially prepared disc and tape recordings, as well as tapes she cuts herself.

Sometimes he works with an entire "class," as introducing a new topic or theory; he also works with sub-groups and with individuals as he moves about the room from "class" to "class." He believes he is thus enabled to give more individual attention, when and if such is needed, to talented pupils as well as to slower learners than he would be apt to provide in a class taught by conventional methods in the conventional one-subject pattern. It is certain that he is able to meet more classes than he could, were each subject scheduled for a separate period.

Mrs. Margaret Law, teacher of foreign languages at Franklin, two years ago picked up the tape-recording technique from her colleague in mathematics. She has since been using it consistently in her multiple class where Latin II, French I and French II "classes" meet with her in the same room during the same period each day. Some of the tapes her pupils use were cut by native French or Spaniards. Other tapes she cuts herself to provide instructions that augment those in the textbooks her pupils use or on the worksheets she has developed to accompany textbooks and tapes.

These tapes enable her pupils to audition the lesson or the drill materials over and over again, thus freeing her from routine instructional duties and giving her more time for individual and group instruction. Her pupils, moreover, cut tapes themselves and play back their own recorded pronunciations. Thus pupils and teacher can compare these efforts consistently and objectively.

These two teachers, one of mathematics and one of foreign languages, report that their pupils learn as well, if not better, than pupils in classes organized in conventional per-subject classes and taught by conventional methods. They say they require more time initially for making lesson plans and auditioning tapes and cutting tapes of their own. Both say that they prefer multiple-class operations and that their pupils seem to be more alert, possessed of more initiative and acquire better study habits than do pupils in conventional classes. Such outcomes appear to characterize well-planned use of tapes and related

learning materials in multiple classes in other schools participating in the Catskill Area Project in Small School Design.

Tape recordings properly used free teachers of much routine drill duty, encourage pupils to re-use these learning materials as often as needed, help returned absentees make up missed lessons without drawing heavily on the teacher's time and, in foreign languages, tapes increase opportunity for pupils to learn proper pronunciations by repeated hearing of native-speaking voices. Moreover, some experimentation suggests that a teacher of foreign languages can guide the learning of pupils in foreign tongues not known to the teacher, where adequately developed and paced tape recordings with related learning materials are available.

Costs of tapes and tape recording equipment are negligible when compared to pupil needs so met and teacher-time more effectively distributed and efficiently used. Teachers say that groups in multiple classes quickly adjust to this kind of learning situation and are not bothered by activities of other groups in the room or by the tape recordings in use. Headphones for each pupil, where tape recorders and other amplifying equipment are used, are not essential although these may be desirable.

Costs per pupil for *individual* "listening stations," equipped with (1) headphones, (2) multiple "channels" for auditioning separate recordings, and (3) volume controls, are not large either. Donald Gould, teacher of industrial arts at the Andrew S. Draper Central School, Schenectady, has constructed 15 types of auditioning apparatus, any one of which can be assembled and installed by industrial arts pupils at costs for parts per individual listening station ranging from \$3.65 to \$7.90 per station.

Such equipment designed by him and assembled and installed by his pupils has been in use in the business education class at Schenectady for the past year where multiple classes, taught by Mrs. Mary Scott, have proved to be effective and efficient.

Mrs. Mary Scott meets three 'classes' at the same time, helped by electronic listening posts installed by boys in vocational arts classes at the Andrew S. Draper Central High School, Schenectady, N. Y.

# Tape Recorded Teaching at Hagerstown

by Pearl C. Snively

**T**ELEVISION tape recording, which has revolutionized the television broadcasting industry more than other technological development, is becoming increasingly important on the national education scene.

One of the crowning achievements of teaching by television tape is that it has inspired a most critical evaluation of every phase of education. This runs the gamut of what, how, why and when to teach what to whom. It involves decisions of where the responsibility should lie for the development and maintenance of specific skills. It involves ways to develop the maximum potential of every child into an intelligent, useful, thinking citizen in a country with a democratic form of government. By means of the Videotape\* television recorder, it is now possible for an individual teacher to envision herself in this role of television teacher, where her effectiveness or ineffectiveness is so far-reaching.

I am one of 28 studio teachers to become actively involved in the county-wide experimental closed-circuit television project at Hagerstown (Washington County), Maryland. This five-year project, which began in September, 1956, is under the direct supervision and control of the Washington County Board of Education. Four organizations have cooperated with the board in this program. They are the Fund for the Advancement of Education (Ford Foundation), Electronics Industry Association, Ampex Foundation, and the Chesapeake and Potomac Telephone Company. Their invaluable contributions

have included equipment, funds for system designing and assembly and assistance with production problems, training of personnel and development of an evaluation program.

The supervisor of televised instruction, the art department, and we 28 studio teachers have desks in the teachers' office building at the Television Center. Adjoining our building is the studio building which houses the five studios from which our telecasts are sent. Also in the studio building are the coordinator of the television project, the secretaries, the engineer and his assistant, the production supervisor and his assistant, a film room and of course a room for the television tape recorder. Across the driveway is the Board of Education building with the offices of the superintendent and other administrative personnel. They also work in supervision of studio teaching. I describe this physical arrangement so you can picture the close proximity of the core of studio teachers to the administrative and supervisory staff and to the studios from which approximately 125 lessons are sent weekly.

Each school day about 92 percent of the pupils of the county receive part of their instruction by television; the other eight percent are attending small elementary schools which are not yet connected to the television circuit.

Television has made every pupil a private pupil. The television teacher can now look into the eye of every pupil. No one is ignored. This eye-to-eye contact brings a different kind of intimacy, a different kind of sharing that is difficult to understand until experienced. The studio teacher, too, freed of trivia that harasses most classroom teachers, can bring a certain

\*TM Ampex Corp.

creasing friendliness to each pupil during every lesson. As one pupil who had never seen his studio teacher in person said, "She likes us."

When the pupils are viewing in large groups, as in the junior high schools, there is still another kind of "group belongingness" that is difficult to describe. There is a close teaching-learning bond between the studio teacher and each pupil plus the togetherness-bond of the pupil and his large group. Thus television brings something unique which our coordinator of televised instruction refers to as "individualized instruction in a group situation." This is in addition to and therefore does not displace, the long recognized values of the live, personal relationship between the classroom teacher and the pupil.

The Videotape television recorder has aided greatly in achieving the objectivity needed for developing that wholesome feeling of self-confidence that is so necessary to all without the magnifying effect of self-satisfaction. With the criteria for evaluating a TV lesson in hand, the studio teacher can sit alone, view the taped lesson on the screen as it is played back and judge her own teaching. Thus she can escape the curious scrutiny of others to see how she is "taking" the criticism. This form of evaluation eliminates her suspicion of possible bias on the part of the critic. The teacher can concentrate on her teaching and not on why others are criticizing her.

The recorder lets her judge for herself whether she talks too much. It lets her see for herself that a good visual aid can replace many repetitious words. She recognizes the reasons why many pupils become deaf to teacher's directions. Teachers repeat them too often. A principal once told me of counting the number of times a teacher had repeated the directions for a certain assignment: 14 times. Of course this was a rare case. But children listen only if there is a need to listen. This television has taught us. Listening skills are making tremendous growth.

The pacing of a lesson can be checked. The criticisms from teachers can become confusing when one says it was too fast while another says it was too slow—if one says there was too much while another says there was too little. By seeing a taped lesson we can judge according to our own goals for each particular portion of the lesson. This aid in pacing involves the speed with which the material is presented; the amount of content; the rate of speech; the time allotted for pupils to think or to write; and the amount of time allowed for the development of a particular concept.

The teacher can see what really is important and learn not to become too much concerned over relatively unimportant items. Some discovered they were bickering over words unimportant to the lesson that slowed an otherwise good tempo. It helps develop a better sense of value, of proportion.

Writing can be checked from the pupils' point of view. We can see if the letters or words are too close together for ease in reading. We can see the importance of the proper forming of each letter for legibility, for example.

Seeing ourselves has lent encouragement to

A helicopter landing caught on tape: from left, James Spear, TV director; Major Guy Brunacci; Mrs. Snively; Lt. John Weingandt.

Mrs. Pearl Snively presenting the television portion of a 7th grade core lesson.

Left to right: John Wahlfeldt (former assistant engineer) and John R. Brugger, chief engineer for the TV Project.

some. It has been possible to see our strengths so we can capitalize on them until our weaknesses are remedied. We have seen the effectiveness or ineffectiveness of specific techniques and know what to work on.

The Videotape recorder is an objective, impersonal device rather than a personal weapon. Thus it has provided a highly improved form of evaluation.

Some of us saw that we were guilty of the same defects we had been trying to correct in our students: faulty phrasing, monotonous droning, halting style, superfluous uh's, ah's and anda's, unpleasantly high pitch, shrillness of quality, and a pace too slow to maintain interest or too fast for thought and absorption. Of course some teachers found their quality of speech good and thus gained more poise and confidence.

Viewing ourselves on the screen has helped us see those little personal mannerisms or eccentricities that even our best friends won't tell us. As one teacher commented after seeing herself, "I make me sick." We can analyze ourselves from a personal standpoint and can check if we are looking into the camera and thus making eye-to-eye contact.

A teacher can sit with a supervisor and view another teacher's tape and analyze the principles of good teaching within it at a mutually convenient time.

**T**HE taped lessons can be shown to PTA's, civic groups and visitors as an aid to the interpretation of the school program—to more complete understanding.

By having a lesson taped before time for presentation, it has become possible for studio teachers to be away for important meetings such as the convention of the National Science Teachers Association held in Atlantic City. Another was able to attend a son's college graduation. Another studio teacher was freed to administer a test in another subject matter field. Thus a professional person was made available for the testing job and the lesson was also taught. Dollars were saved.

One of the great advantages of using the recorder is related to the overcrowded conditions in one school while a new school is being constructed. The older building is used by the senior high school students in the morning and by the junior high school in the afternoon. Since my seventh grade core-lessons are telecast in the morning, we tape those lessons during the live telecast and play them at a convenient time for the second-shift students in the afternoon. Thus the televised program can continue for all uninterrupted.

Tape gives us an opportunity to observe the reaction of a class as the lesson is being taught—the interest of the pupil in the subject matter, the effectiveness of different types of student participation, the need for variety in the pacing of a lesson, the ability of pupils to take notes and to recognize their problems in note-taking, the effectiveness of teaching aids, different types of camera shots and lighting effects.

By means of the recorder, the studio teacher can be in two places at the same time. She can

be on the TV screen and still be present at school in a remote place for a follow-up. The studio teacher is able to keep in touch with the reality of the classroom situation, to see the problems, to get suggestions firsthand from the classroom teacher. It enables the student to know the studio teacher as a real person rather than as a picture on a screen.

It is now possible for us to use, and keep for future use, resources far beyond a teacher's greatest dream. In the spring of '59, students from countries spent a week in Hagerstown studying the educational set-up. These students were used on our telecasts in interviews, discussions, in traditional dances, in games, in singing, in playing musical instruments common to their countries in making handicrafts, and wearing their national dress. Many of these experiences were taped for future use.

An expert, such as a leather carver, can come from a distant point and tape a demonstration of leather carving, another can demonstrate tape weaving and judging of oriental rugs, another the importance of map reading to the defense of our country, and still others how they cross the Sahara by motor scooter. These can be preserved indefinitely for timely telecasting.

How has my teaching ability improved with television? Television has made it possible for me to look each pupil in the eye and talk and think together with him until we have made the problem clear. Whenever we need some sketched some model, some map, some clever moving gadget to make the difficult part clearer, we have it as quickly as the Genie of the Camera can produce it and that is at the precise instant we wish it.

My pupil (each one of the 1,900) can always see it quite clearly from his "front row" seat. If it is something too precious to move from the glass case, there it is right out where he can see it and have it turned around. If it is something like a loom from Iran, it doesn't just sit there—someone who knows shows how it is used. And if it's an oriental rug, it doesn't just hang there; he hears why those particular colors and designs are in it, what makes it such a valuable one. He sees films and tapes showing the way people live in the country where it was made.

What do I think of teaching by television? Television has made the most challenging demands on teachers and teaching, but in so doing it has softened the arteries of thought. I see for the School of the Future as little likelihood of teaching without television and the recorder and there is likelihood of books without pictures. It has revealed new horizons that stimulate us to further study of how to use this powerful resource for improving the quality of our teaching. Through the use of the recorder, teaching has been revealed in stark reality. An electronic device exposed me and my teaching without our protective shields of good intentions and conscientious endeavor. I stand with my rationalizations, prejudices, and weaknesses clearly revealed before me for just what they are. For, as Robert Burns might have said:

"Now some Power the gift hae giv'n us—  
We see oursels as ithers see us!"

# Planning An AV Conference?

*This Florida State University conference on instructional materials in modern languages was only one of many regional AV meetings during recent months. But it was so well planned—and had such fruitful results—that Educational Screen and AV Guide decided to carry a brief rundown of its scheduling.*

*Submitted through the courtesy of Dr. Otis McBride, head of Department of Audio-Visual Education, Florida State University.*

## Thursday

7:00 p.m.

The conference opened Thursday evening with registration, and a social hour, in the lecture hall and lounge of the School of Education.

## Friday

8:30 a.m.

Dr. Oelschlager presented the president of Florida State University, Dr. Robert Strozier, who greeted the group and wished it well in the conference.

Ten modern language laboratory setups were established around the walls of the lecture hall—in which the meetings were held. This worked out to be a rather ideal situation. At every coffee break and before and after sessions, conference participants had opportunity to look at the modern language laboratory equipment and talk with the representatives.

9:00 a.m.

At this session Mr. Barry Morris, chairman, presented Dr. Oelschlager who reviewed modern trends in language teaching, followed by Mr. O. E. Perez, who discussed thoroughly the modern language curriculum in the elementary and secondary schools.

10:20 a.m.

This session presented a symposium on NDEA—its immediate and potential effects on language teaching. The members of the panel discussed some of the phases of modern language teaching in public schools, junior colleges, and county-wide basis.

1:30 p.m.

The chairman of the session, Dr. Max Oppenheimer, presented first Dr. Joseph Hutchinson,

NDEA, U. S. Office of Education. Dr. Hutchinson, the specialist for the NDEA office on modern language laboratories and their operation, discussed some of the aspects and problems in the whole area.

2:30 p.m.

Next came Dr. Ted Mueller, associate professor, Department of Modern Languages, University of Florida. In his presentation, he dealt primarily with the material for the modern language laboratory, the tapes to be used, the production of those tapes, learning through repetitive procedure as done with a language tape.

3:20 p.m.

Mr. James Harbin, director, Materials of Instruction, Leon County Schools, chairman of the 3:20 session, presented Dr. Ted Mueller in a demonstration, play-by-play account of the working of the modern language laboratory.

## Saturday

9:00 a.m.

At this time AV dealers were given a space of ten minutes to explain briefly the operation and favorable characteristics of the equipment he was selling. A great many questions were asked and a great deal of information regarding modern language laboratories was brought forth.

11:35 a.m.

This session consisted of Presentation and Discussion of Visual Materials for the Teaching of Modern Languages, with Miss Mary Alice Hunt; and The Place of Educational Television in Modern Language Teaching, Dr. Joseph Hooten.

12:00 noon

Dr. Oelschlager presented Dr. Karl S. Pond, director of Modern Language Laboratories, University of Miami, who, using a number of slides for the overhead projector, presented laboratory lists, introduced shortcuts and studied drill methods which would aid in the acquisition of a workable vocabulary and the correct handling of the problem of grammar. Following his presentation the conference was summarized by Dr. Oelschlager and Mr. O. E. Perez.

# FILMSTRIPS

by Irene F. Cypher

If one picture is to be worth the thousand words we are always hearing about, then it had better be a good picture. Personally we think this is a much overrated statement, and one that has done as much harm as good. We have seen many pictures that were not worth ten words, and they did more mischief than good.

For instance, those pictures that include all possible details of a situation and include every item that has any bearing upon the subject. Crowded into this picture will be houses, trees, animals, people, grass, flowers, children, adults, homes, boats, trains, airplanes and every creeping thing that can possibly get into the picture.

The viewer is at a loss to identify any specific point of focus until he has spent considerable time letting his eyes roam over and around the mass of details. When said eyes finally come to rest on some particular corner, they will probably be so tired trying to take in the mass of minutiae, that they fail to convey a clear message to the brain and the picture is passed and forgotten. Instead of leaving a vivid impression on the mind of the viewer, there

will hardly be a memory or impression of anything beyond a sort of recollection of some vague shapes and colors.

It is time the ones controlling the focusing of the lens of a camera or the brush or pen that delineates a picture realize something of what we have tried to say above, and give us simple, clear pictures; pictures that one can recognize without an hour of puzzlement over details; pictures that attract the eye and invite the viewer to examine and enjoy a representation of something that has meaning for him as part of a course of learning. Certainly when it comes to the matter of filmstrips, with the already small area available for a picture, the meaning and purpose of the pictorial content should be kept in mind. Each frame should show its story in such a way that we can recognize objects and people; nonessential details should be omitted; major details should be highlighted, and a bit of beauty included in the color presentation. Then the pictures might really be worth using.

*Wild Animals of Pioneer America* (a set of 8 study prints; produced by Audio-Visual Enterprises, P. O. Box 8686, Los Angeles 8, Calif.; \$9.75 per set). The animals of the new world were very important in the exploration and settlement of the colonies and played a very prominent role in the life of the early settlers. This set of lithograph pictures gives us large, clear pictures, easy to identify, well organized as to background and details. The animals included are the wild horse, sea otter, beaver, American bison, deer, grizzly bear, gray wolf. The artist responsible for the work has prepared habitat groups for museums, and brings to the prints the same technique of presenting animal and natural habitat in such a way as to give some concept of the value and importance of each. The material will be useful for any units of work in social studies, nature science, natural history; it is a type of picture presentation with appeal and can be used for bulletin displays, study and discussion.

*Leaders of America* (6 filmstrips, black and white; produced by Encyclopaedia Britannica Films, 1150 Wil-

mette Ave., Wilmette, Ill.; \$18 per set, \$3 single strips). The third in a series of sets dealing with outstanding figures in the history of our country, this set focuses attention on Lincoln, Jackson, Webster, Calhoun, Lafayette and John Quincy Adams. These are not personal biographies but an attempt to give those episodes in the lives of the men that serve to show us what they contributed to the development of our country. You might call them biographical vignettes, and they can be made to serve as the basis for lengthier studies of social events, political campaigns and economic developments. The personalities are painted against the background of their careers and work. Intended for use in the middle grades and higher, especially for social science and history.

*India and Ceylon* (6 strips, color; produced by Jan Handy Org., 282 E. Grand Blvd., Detroit 11, Michigan; \$31.50 per set, \$5.75 single strips). The specific areas included in these studies are Ceylon, the farm and village sections of both northern and southern India, Delhi and New Delhi, the Vale of Kashmir, the Ganges Valley and the Malabar Coast. Major industries and ways of earning a living are highlighted. Special attention is given to the contrasts to be found between ancient and modern ways of living and the problems encountered by those who would assist in improving both agricultural and industrial life. The photographs have been well selected and they show a good cross section of the people in this part of the world. The material is good for social studies and for international affairs units.

*Our Ever-Changing Earth* (6 strips, color; produced by Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$32.40 per set, \$6 single strips). Our earth is in a constant state of change, the work of running water, wind, ground water, the sea, snow and ice and internal forces. It is fascinating to consider the many forces which are always at work in this process of change and to see how it all affects our way of life. There are many diagrams and charts to help explain such things as erosion, water table, stalagmite, runoff, etc. Basic facts are grouped and well presented; scientific terminology is simplified. The material can be used in conjunction with standard textbook work or as preparation for field trips and further research. It is best suited to the upper grades and will hold the interest of pupils at this grade level.

## IMPORTANT NOTICE

TO USERS OF

3 1/4 x 4 SLIDE PROJECTORS

If you use a Slide King, a Galde, a Delineascope or a Strong Arc slide projector, you can now adapt to it:

THE GENARCO ELECTRIC SLIDE  
CHANGER FOR 70 SLIDES

Illustrated Literature From:

**GENARCO INC.**

97-03 Sutphin Blvd.

Jamaica, N. Y.

*The Canadian Parliament* (single strip, color; produced by National Film Board of Canada and available from Stanley Bowmar Co., Valhalla, N. Y.; \$5.) If ever you have stood on the steps of the Houses of Parliament in Ottawa, you realize how many Americans visit this neighboring capital city. Yet all too few of them really know very much about the details of the Canadian form of government or the center of the government. It would be a good thing to show this filmstrip during our social period classes, when attention is centered on democratic forms of government and leading world centers. The filmstrip is really a field trip to visit the Canadian House of Commons and the Senate Chamber. We are also given some idea of how the Canadian parliamentary system differs from our own form of government. This is a very interesting trip for social studies, world history and for any group interested in knowing more about Canada.

*The Solar System* (6 strips, color; produced by Films for Education, Audio Lane, New Haven, Conn.; \$42 per set, \$7.50 single strips). The producers of this series have already given us some excellent material dealing with the astronomical system, and this set continues with studies of the solar system and its parts. It is more important than ever today to understand something of the way the solar system functions and what we mean when we talk about the effect of the sun on the earth, the planetary system, comets, meteors, asteroids and space travel. These strips are well suited to class work in astronomy, natural science and physics, and also to be recommended for camps, astronomy clubs and groups interested in the study of astronomy as a hobby.

*The Wonder of Crystals* (single strip, color; produced by Moody Institute of Science, 11428 Santa Monica Blvd., West Los Angeles 25, Calif.; \$6). This is one in a series of filmstrips for the elementary grades. The particular strip here considered is devoted to a close examination of how crystals are formed. The color quality and photography are excellent and you have a feeling that the crystals are right before you and could be handled.

Communications to the Filmstrip department should be sent direct to the Filmstrip Editor: Irene Cypher, New York University, 26 Washington Square, New York 3, N. Y.

when you specify:

**"BESELER, or EQUAL"...**

The Beseler

## VU-LYTE II

OPAQUE PROJECTOR

When your specification sheet for Opaque Projectors reads, "Beseler, or Equal" it can only mean Beseler Vu-Lyte II. We are proud that our name is used as a standard. But, we take even more pride in the fact that Beseler Vu-Lyte II Opaque Projectors have not been equalled, though often imitated.

### Here is the proof:

**1. UNIVERSALLY ADJUSTABLE PLATEN.** Vacuumatic platen\* holds single sheets flat, without flutter — eliminating copy holders. Platen mechanism lowers parallel to desired copy plane. Holds steady in preset position without locking — no fear of snapping closed. The problem of annoying light leaks around the platen has been solved by the new Beseler Flashield which attaches permanently in one minute and holds in every ray of light.

**2. PROJECTS ALL SUBJECTS.** Feed-O-Matic\* conveyor belt, crank-feeds continuous copy. Built-in drawer accepts glass plate for projection of books and glossy photographs. Large rear door for oversize specimens and easy access to projection lamp. Heat reflecting filter available for projection of temperature-sensitive materials.

**3. SPECIALLY DESIGNED LENS.** 5" diameter, 18" focal length f3.6 color-corrected, coated anastigmat for overall sharp image, with Double Rack and Pinion focusing. Permanently attached lens cap offers permanent lens protection.

**4. LIGHTWEIGHT, RUGGED CONSTRUCTION.** All wrought and riveted aluminum construction, contoured to hug optical path, for maximum compactness. Weight only 29 lbs., with two carrying positions. As an added convenience it has a permanently attached 15 ft. power cord with molded on right angle plug, and storage space provided in the projector.

**5. HIGH LUMINOSITY OPTICAL SYSTEM.** Delivers 140 lumens, for uniform projection even in lighted rooms. Secondary reflection system features unbreakable "Alzac" mirrors. Cooling system reduces heat to minimum. Virtually no fan noise!

**6. BUILT-IN PROJECTION POINTER.** Dust-proof Pointex produces bright, sharp arrow image that moves anywhere on screen. Optical system\* utilizes same lamp for projection and pointer — no extra lamps or external wiring.

\*Patent or Patent Applied For

There's only one way to get Beseler Quality on all features and to get these 6 advanced design "exclusives". When you order Opaque Projectors specify: "Beseler Vu-Lyte II — No Substitutes Accepted."

# AV in the Church Field

by William S. Hockman

## Sell Utilization As Well

About one year after enthusiastically previewing that remarkable film *Rembrandt: Painter of Man*, I tried to book it for use in a Lenten program of one of our couples clubs. Do you think I could find a color print! two tries in New York; one at a big university; another big film library. No luck.

In desperation I phoned Coronet Films in Chicago, the concern which made this Dutch-produced masterpiece available in this country. That Grand - Man - of - Films, Ellsworth C. Dent, was called to the phone and I learned that the film had not sold widely. "But," I said, "it is a great document, why didn't you sell it?" Among the reasons he gave was one that hit me hard—"People just assumed that it was another 'art' film, I suppose, and thought they had enough in that category."

As I thought over my conversation with this great AV salesman and educator, I began to think that one has to

do more than sell films. He must sell utilization, too. He must sell it as good for some use; as good for some group; as good for some occasion. And this selling must begin at the top and go all the way to the bottom—the user.

Now this Rembrandt film is great! It's a human document of power. I know. I have seen it four times, used it once. I am not fooled—too old for that! Here is a film that church people ought to see for two reasons, among dozens: it is great art that they will see, and they will see it better than if they went from museum to museum and confronted the pictures themselves. (This was the comment of a much-traveled member of that Lenten audience).

After the art comes the second reason: It is the power of this film, when given a proper setting and context, to give people a valid religious experience. You should have seen that audience on March 2nd! It was a number of seconds before it could get its objectivity back, and then it just had to applaud. And I have never had more

appreciative comments about a film than about *Rembrandt: Painter of Man*.

The university library said it had had some calls for the film, but they had not bought it. They may have felt they were already heavy on art films. Another New York City library said they had a black and white print, if I could use that. Black and white for Rembrandt! How much of the real Rembrandt can you convey in b&w? Some, of course, but not enough for use with a general audience.

Well do I realize that such a film comes at a pretty stiff print-price and that the library must consider how and when it will get its money back from rentals and earn something on its investment of capital and overhead. But my point is that such a film must not only be sold to the library as good for something but the library must 'sell' it to its user clientele. It is not enough to announce such a film. Certainly you'd never say to a church, school, club or any potential customer: "We've another art film, this one's on Rembrandt. Hope you can use it some time."

I hope I have made my point: Films must be sold and rented in terms of their usefulness, and both producer and library must go beyond title announcements in these times when hundreds of good titles compete for attention. For users have none too much imagination when it comes to setting audio visual aids of all kinds into some on-going program, be it church, synagogue, school, or community organization.

## Catholic AV on Increase

"The use of audiovisual material in Catholic religious education has increased some 200 percent in the past ten years, and approximately two out of every three parishes in the country are using some type of films or filmstrips in their religious education program," stated Rev. Michael F. Mullen, C.M., of the faculty of St. John's University, Jamaica, N. Y., vice president and chairman of the evaluation committee for the Catholic Audio Visual Educators Association (Box 618, Church Street P. O., New York 8).

"Although Catholics are relative newcomers in the field of audiovisual education, it is interesting to note that there are now over 235 films and some 736 filmstrips available for use in the classroom," he stated. The source availability and cost of this material has been listed in the second annual edition of CAVE's Evaluation and Directory, Father Mullen indicated. CAVE has already reviewed more

Kenneth J. Anderson, director of Christian education, Lutheran Church of the Good Shepherd, Minneapolis, is seen discussing the use of the AV training kit, "Using Audio-Visual Aids In A Church," with Mrs. Sihler, film supervisor for the church. All four titles in this series were produced by Family Filmsrips, Inc. They were widely used in this church to 'sell' the idea of visual aids as well as train the teachers of the various departments.

in 100 items.

According to a film executive noted in the current annual report of Film World, the church audiovisual field is growing so rapidly that it will soon outstrip the educational field in the amount and variety of audiovisual materials," stated Father Mullen. "In keeping up with this tremendous growth, CAVE for the past three years has been evaluating the worth of film and filmstrip material as a guide to religious teachers throughout the world.

"Our organization has a 15-member evaluation committee with members located in New York, Chicago and Buffalo, and we use a ten point criterion for evaluation based on Catholic theology, philosophy, and psychology, together with film objectives and technical excellence, to rate productions," he indicated. The Directory is a summary of the findings of the committee.

"CAVE sincerely hopes that Catholic educators throughout the country will take advantage of the work which has been done in the audiovisual field and become acquainted with the tremendous opportunities afforded them to increase the effectiveness of their teaching by these new methods," Father Mullen concluded.

### Outstanding Film

Having seen most of the 'human production' films and finding many of them of the nuts-and-bolts variety, it is good to come across one which is both artistic and solid science. If there is any subject which needs to be treated as beyond plain facts it is the great and beautiful and divine story of human love and reproduction. This treatment is found in *From Generation to Generation*.

In it there are three categories of photography—exquisitely beautiful nature scenes, beautiful and appealing shots of a family amid these scenes and at home, and the sensitively beautiful animations of an artist who was well aware of the beauty, wonder, mystery of the subject matter under his hand.\* (Released to the religious field by the Broadcasting and Film Commission, with general distribution rights going to McGraw-Hill, N. Y. 5.)

And what is this good film good for? For just about every one over 12

*Philip Stapp will be especially remembered for his beautiful and meaningful animations in the films Boundary Lines, Picture in Your Mind and others.*

# STILL TRANSPARENCIES with AO's NEW TECHNAMATION

## Come to LIFE!

Make liquids flow, wheels turn, gases explode... show vibration, speed, turbulence and many other movement forms. You do-it-yourself with AO's New TECHNAMATION® Materials Kit. Includes everything you need to give action or color to any static, black and white transparency.

Simply cut self-adhering material to shape with knife or scissors and apply to any portion of the transparency where motion is desired.

Attach a motorized polarizing spinner (also available from AO) to your overhead projector and view the amazing results. The easy addition of dynamic motion simplifies the most complex subject... makes it easier to understand and remember. Write today for complete information.

# NOW! TEACHING AND SELF

MODEL 720

## "ADD+A+TRACK"

by **V-M**

- Dramatic new development for modern teaching and learning techniques develops oral skills and promotes retention!
- Excellent for language and speech students—speeds learning!
- Helpful to music students—helps improve technique!
- Benefits teachers—saves time and energy!

Exclusive V-M "Add-A-Track" is the big *new* feature in tape recorders! Opportunities for powerfully effective teaching methods are limitless! Record on one track, rewind the tape and record again on another track *while listening*

to the first recording through the V-M recorder's own speakers or through another speaker system. Then play-back again and you hear *both* recordings *simultaneously!* The student can re-record his voice or instrument, repeatedly, without affecting the first (or master) track in any way. He can even play a duet with himself!

For budget-conscious administrators, here is the economical way to begin a completely effective modern language laboratory! Here, in one compact portable case, simplicity of operation is combined with practical versatility for the many uses it will find in every school.

V-M/"ADD-A-TRACK" 'tape-o-matic'® 4-TRACK STEREO-PLAY TAPE RECORDER—Records and plays-back monophonically on four tracks. Plays stereophonic tapes. High-Fidelity Speaker System. Simple Push-Button controls assure complete simplicity of operation.

CITY \_\_\_\_\_ ZONE \_\_\_\_\_ STATE \_\_\_\_\_

years of age, and some parents will want their Juniors to see it. It tells the story from conception onward and places the coming of the New Life amid the rhythms of nature and the love-circle of mother, father and an older child. This film can be shown to the family group, and you can say this of few others. It can be shown to girls, young women, couples both married and unmarried. It makes more than factual impact. It carries the overtones of the human; rises above disgustingly candid.

While highly recommending this film to the churches for use with youth fellowship groups, youth clubs, young adults, and adult groups, one word of caution may not be out of place. Please give such a film the right kind of context—serious, quiet, artistic, spiritual; not casual, flippant, or worst of all matter-of-fact. If you can't set it in a suitable context, send it back; don't run it.

### Meet The Press Secretary

Meet not only her but a lot of fine ideas about how to get publicity for your church in the film *Making It Work*. How you are going to keep that

title associated with the contents of this fine film, I don't know!

Produced by the Seventh Day Adventists, this film is a polished performance both technically and in content. Ministers should see it to help motivate them to appoint a 'press secretary' for their church. Official boards should see it so they will appropriate a little budget-money for this type of effort. All those who now perform the duties of press secretaries for their churches or any groups within the church should see it to get wised up on how to approach the newspapers, the radio and the TV stations. In 20-some minutes there's a lot of elucidation. (Availability not known at this writing; try Broadcasting and Film Commission, 475 Riverside, N. Y. 27)

### Siam On The Sampan

You will chuckle every time you remember the cat fight, of all places, in the primeval ooze of a riverbank. You will see it in the 31-minute color film *Siam*. You will see people, rice farming, sampan commerce, religious festivals, royal pageantry, working elephants, and—that cat fight! When they

come up out of that mud! I still shake with laughter!

This is a Walt Disney package. It has nothing to do with missions. Don't look at it for that. See it for its humanity, God's humanity. See your neighbors, now just around the corner in this atomic age. After all, every intelligent person wants to know something of his neighbors and via this film, your acquaintance with the folks of (Siam) Thailand is a pleasant experience. You'll not forget about the charming Thai people, their rivers and their floods, the rice, and sampans and Buddhist monks begging their breakfasts, and that fancy and ferocious Thai boxing, and—that cat fight.

What a fine film for the family night, the couple's club, the men's fellowship group! Ask the 16mm division, Walt Disney Productions, Burbank, if there's a print near you. If N. Y. can serve you, write to 447 Madison Ave., N. Y. 22.

*Communications to AV in the Church Field should be sent direct to the department editor: William S. Hockman, 12 June Drive, Glens Falls, N. Y.*

*the first in a dramatic new series on the world's religions!*

## THE CRESCENT and the CROSS

A Film on the Religion of ISLAM

An unusually objective treatment of Islam filmed with the cooperation of Middle East Governments and the authoritative counsel of J. Christy Wilson, Dean of Field Service, Princeton Theological Seminary. Against a backdrop of ancient religions in the land of the Pharaohs two young Americans learn about Islam which burst from its desert birthplace to spread like wildfire thru Africa, Asia and Europe. Actual on-location scenes, *filmed in the heart of today's Middle-East*, presents with pictorial eloquence history, travel and religion.

# FILM EVALUATIONS

by L. C. Larson and Carolyn Guss

## The A Traffic Policeman

Portafilms, Orchard Lake, Michigan)  
10 minutes, 16mm, sound, color or  
black and white, no date. \$100 or \$55.

### Description

Through animation and incidental audience-establishing shots involving actual photography, the film functionally defines traffic, traffic rules and the application of traffic rules. In so doing it relates these three concepts to the everyday activities of young children and places the responsibility for safe and courteous traffic behavior on them.

Even before the title appears, a friendly policeman is shown discussing traffic with a boy and girl of nine or ten years of age. The title fades out as animated figures illustrate how the protagonists in the film become a part of traffic by going to school, to the library, to the store, and to the playground. Various types of traffic are shown as bicycles, cars, buses and pedestrians go their various ways.

The friendly policeman—now only an off-stage voice—comments that there are certain things all people must do in order to be safe and to get where they are going. The young children volunteer that these procedures are called rules and they give us examples of rules they already know: look both ways when you cross a street; stop, look, and listen at a train crossing; and signal when you are going to turn the corner on your bike.

The traffic policeman agrees that these are "rules" and that each person must know and apply them. He reminds the boy and girl that they are responsible for their own safety and for helping make traffic safe and enjoyable for others. They agree that it would be impossible, even silly, for each person to have a traffic policeman over him. They further agree that it is much better for each person to be his own traffic policeman. Animation shows how the brain which carries the image of each person is the control center of behavior.

To test the idea of each person being his own policeman, an actual view of the policeman and his youthful friends introduces three or four

"let's pretend" situations which reveal how each person can control his own behavior and be attentive to the safety and feelings of others. They show incorrect and correct ways of walking along a road which has no sidewalks, playing ball (not in the street but on a playground), and roller skating on the sidewalk.

The concluding sequence which again has the real policeman and children shows how they agree that knowing the rules, being conscious of their importance and application, as well as behaving accordingly result in everyone being safer and happier. The question of "how about you" is flung out to the viewers of the film.

### Appraisal

Audience identification and high motivation of youngsters to do something about traffic safety as a result of seeing the film were clearly demonstrated in the classes of the primary and intermediate teachers who tried the film on an experimental basis. The youngsters wanted to set up their own "let's pretend" situations and eagerly shared their observations of, reactions to, and suggestions for traffic behavior around the school and in the community. The previewing committee rated the film very high in terms of its psychological approach to learning, its creative and imaginative treatment of content, and its selection and organization of ideas. Both the teachers and the evaluating group reacted very favorably to the "self-discipline" concept which they felt was very clearly and convincingly portrayed in the film. They felt the idea could be transferred to other situations. The film is highly recommended for use by pre-school groups and the first four or five grades.

### You And Your Eyes

(Educational Film Division, Walt Disney Productions, 477 Madison Avenue, New York 22, New York) Produced by Walt Disney. 8 minutes, 16mm, sound, color, 1956. \$100.

### Description

Through the use of animation and cartoon characters, *You and Your*

*Eyes* presents the structure and function of the human eye. It depicts the similarities between the eye and the camera, compares the human eye with the eyes of several other animals, and stresses the importance of proper care of the eyes.

Jiminy Cricket points out that man has always been a seeing animal, depending upon his eyes for survival. To illustrate this point, a cartoon caveman is shown getting a head start on a mastodon by use of his superior vision. Today the eyes still aid in our survival by helping us to keep out of the way of automobiles and other conveyances.

In the next sequence the eye is compared to a camera as Jiminy Cricket shows that both need a lens and a substance on which to record the image. The inversion of the image by the lens is indicated. The fact that we do not see things up-side-down is illustrated as a finished picture is turned upright for viewing. In the same way the brain inverts the image it receives to enable us to see things in proper perspective. A sequence showing everything up-side-down portrays the problems which would be encountered if this were not so.

Another important structure of the eye which is similar to that in a camera is the diaphragm. Jiminy compares the diaphragm in the camera with that in the eye, showing that each serves the same purpose.

The film then shows that the light receptors of the human eye are composed of rods and cones. Chickens, as is indicated, have only cones in their eyes and can see only in daylight. The bat, on the other hand, has only rods and can see best at night. The human eye, having both rods and cones, can see both by day and night.

Jiminy then discusses the parts of the eye which serve primarily as protective devices. The tear gland acts as the windshield sprinkler on an automobile. It constantly washes the eye and the eye lid wipes any foreign matter away. The eye lashes act as screens to keep out dirt and insects. The brows serve in the same capacity as the eaves of a house, keeping out rain and perspiration.

Optical illusions are touched upon briefly as Jiminy Cricket draws two

lines on the chalkboard. One appears longer than the other although both are of the same length. Jiminy explains that we do not always see things as they really are.

The eyes of some animals are quite different from the human eye. The eagle, for example, is able to see things at great distances. The frog is able to see only those things in his immediate surroundings and even then only when they move. The bee has about 12,000 eyes and thus sees many images at a time. The human eye is depicted as a much more efficient organ of sight than other animals' eyes.

The film is concluded as Jiminy Cricket suggests certain things which should be done to help conserve eyesight.

### Appraisal

*You and Your Eyes* will do much to help intermediate grade youngsters understand the structure and function of the human eye. The film is well organized and the cartoon characters help immensely to illustrate the points covered. Some of the concepts pre-

sented are quite advanced; the excellent use of visuals, however, makes them easily understood. The film will be most useful at the intermediate grade level, but primary grade children will enjoy and get much from the film. It could also be profitably used as a review for junior high students. The technical quality of the film is excellent, further contributing to the value of *You and Your Eyes* as a teaching aid.

—Donald L. Nicholas

### In Case of Fire— Fires and Fire Drills

(*Encyclopaedia Britannica Films*, 1150 Wilmette Avenue, Wilmette, Illinois) 19 minutes, 16mm, sound, color or black and white, 1959. \$240 or \$120. Teacher's guide available.

### Description

*In Case of Fire—Fires and Fire Drills* is divided into three major sequences. The first illustrates the correct methods of dealing with a fire in school; the second shows the correct and incorrect procedures of coping

with an emergency in a theater; the third part is an illustration of a little girl applying what she has learned about fires when she is trapped one in her home.

Exciting scenes of fire-fighting activity open the film. Sounds of sirens, search lights playing over the area, men dragging hoses, and the fire titles superimposed over a close-up of the flashing emergency light on a fire engine create an aura of intense excitement. The narrator asks, "Do you know what to do in case of fire?"

The excitement of these first few scenes is leavened somewhat by the tranquility of the next few. A playground is seen from the window of a classroom. The class is interrupted by a fire drill. The children quickly and calmly vacate the building and the narrator reminds the audience that the lessons we learn from fire drills may be the most important we learn.

We are then taken through a sequence of events in the same school when there is a "real" fire. We see the value of fire drills and preplanning of alternate courses of action to meet emergencies which might come about due to fires. One group of children

forced to use an alternate exit when their path is blocked by flames. Another group is trapped in their classroom and forced to wait until they are rescued by the firemen. The proper procedures for evacuating a school building in case of fire and the value of remaining calm are illustrated throughout the first sequence.

The second major sequence deals with the correct and incorrect methods of coping with a fire in a theater. "Saturday matinee" is in progress when a girl smells smoke, stands up and screams "fire!" Panic ensues as people fight to get out of the main floor of the theater. The same event is shown again, but this time the girl notifies an usher who calmly evacuates the audience from the building. What she learned about fires in school helps a little girl save her life and possibly that of her family when she is trapped in their burning home. The family dog is awakened by the smell of smoke. The dog manages to wake the girl but she can't leave her room because of flames at the door. She calls to her mother and father, and eventually her father rescues her just as the firemen arrive. There is a tense moment while the firemen are putting out the fire when the little girl remembers that the dog is still trapped in her room. The firemen save the dog, and the remainder of the film shows some extensive interior fire damage to the house. The point is clearly made that the little girl is safe because she remembered what to do in case of fire.

**Appraisal**

*In Case of Fire—Fires and Fire Drills* is highly recommended for use in first to eighth grade classes. By ingenious editing, excellent photography, and framing the lessons within the context of a simple plot and much drama, this film emphasizes the importance of drills and planning. Above all, it shows that there is something that the individual can do to help himself before the firemen arrive. The review committee indicated that there is enough vital information contained within this film to warrant every elementary school pupil seeing it. Teachers of primary grades may find it necessary to prepare their pupils for the film in order to avoid undesirable exciting effects.

—Philip Morrison

# AUDIO

by Max U. Bilderssee

We've been up to our ears—in sound, of course—for the past month. And much of it has been good, and equally much has been interesting from your standpoint and mine.

We wandered slowly through the several exhibit halls in Cincinnati at the DAVI meeting. More sound was evident than at any previous exhibit we've been at and this was gratifying.

Equipmentwise, the language laboratories were there in full force. There was Audio Teaching Center, Audioelectronics, Cousino Electronics Corporation, Instructomatic, Langua-Lab, Magnetic Recording Industries, March and Associates, Mobile-Tronics, Monitor Language Laboratories, RCA-Victor, Rheem-Califone, Science Electronics and Universal Language Laboratories Corporation. Each of them showed the advantages of audio language instruction and each spoke in terms of the use of tape as a medium for language instruction.

And this year there were more record producers present, too. This list includes the American Book Company, Cultural History Research, Inc. (featuring recorded lectures on art), Encyclopaedia Britannica Films, Folkways Records, Jam Handy, Linguaphone, McGraw-Hill and Stanbow Productions.

Then there were a number of record players and tape recorders being shown by Audio-Master, Bell and Howell, Dukane, Foringer and Company, Miles Reproducer Company, Newcomb Audio Products, North American Philips Corporation, V-M Corporation and Webcor. This simple list represents about a quarter of the exhibitors, a good showing far ahead of previous years.

It was interesting to follow the crowds as they examined the materials and equipment at the show. Previous 'glamor' exhibits were somehow less attractive. The language laboratories, still a challenge in many communities, drew many spectators. There was considerable interest in Instructional Materials for the language laboratories and many questions were asked in this direction. But the really busy exhibitors were showing teaching machines. These were simple ma-

chines, some of them, which required the skills of reading, writing and pushing buttons. Others were highly complex electronic equipment that even timed the responses and scored the student accordingly.

But, as in the case of language laboratories not too long ago, there was an admitted need for more and still more program material for the teaching machines. Just as each new complex machine comes into the market there is demonstrated again the need not only for equipment but also for adequate and superior materials. Machines are lasting, materials are used and gone insofar as the individual student is concerned, and new materials must be supplied all the time.

Material for language laboratories is beginning to emerge on the market in greater quantity. The major suppliers today are Folkways Records (the disc recorded material is available on tape), Henry Holt (disc or tape can be secured, but the same material is on each), Linguaphone (reissuing material previously available only on disc) and EMC. There is still a great need for more specially prepared tape recorded material for language laboratories.

From Cincinnati we journeyed east through Washington to Baltimore where we audited the tapes of some new language records soon to be offered by Oppenheimer: Publishers (4805 Nelson Avenue, Baltimore 15). You will recall that, using the Cabot label, Oppenheimer introduced the

For language studies.

very popular H-R-S (Hear-Repeat-Speak) language records for children in French, Spanish, German, Italian, Hebrew and Russian that have been

so widely accepted and used for preliminary language instruction in the grades. Now they are offering more advanced material using Gateway as the keyword. We heard *Gateway to French* (Oppenheimer: Publishers catalogue number 4201) which can be used on the junior and senior high school level by students who have had some work in the language. Two aspects which are important are added: language recognition in the printed form through the accompanying student manual, and rapid audio response to the record. Students working alone—and classes working in unison—can use these records for vocabulary building, aural comprehension and speech practice.

These records are sufficiently inexpensive that they can be added to school library collections and loaned overnight and over weekends to students who want to practice on their own. And of course their parents will want to practice, too.

We were interested to note that *Let's Look At Great Paintings* (Educational Screen, March 1960) attracted the attention of the Dave Garroway station and was the subject of part of one of their telecasts. We learned when we were in Baltimore that this superior recording had had excellent press reception and that both public and school acceptance was higher than the producer had anticipated.

We went on to New York to 'lend an ear' to the new *The Anatomy of Language* (Folkways FI 9108) which is an instructional tool deliberately designed for high school seniors and juniors. This is primarily an intensive review for college entrance and scholarship examinations. It can, of course, be used in regular English classes.

Included is a selection from literature: "The Breaking of the Wind-Cask" which you will recognize as a short excerpt from Charles Dickens' *Tale of Two Cities*. This is read for literary values as a portion of the lesson on "How To Write an Effective Composition" and the listener is warned to seek the devices used by the author to arrest attention, develop interest in his characters and appeal to the senses and emotions.

This reading is part of the section in the record series devoted to composition. Under this heading, "Narrative and Descriptive Writing" precedes a discussing of "Exposition: Organizing and Writing an Essay." In addition to composition, attention is directed to reading comprehension and word relationships in special sections. By far the greatest proportion of the series of 14 lessons is devoted to i

ensive study of vocabulary and sentence completion. In this area the topics discussed stress the importance of language in "The Measurement of Time," "Number," "Place," "People" and "Things." Under the general heading "People" there is study of both the physical aspects of man as well as his mental and spiritual aspects. Family and religion, education and government, senses and emotions and work are all subjects of special lessons in this series. Finally there is a vocabulary review and mastery test.

This does not represent 'passive listening' in any respect. The listener, to profit from these recordings, must pay close attention to the script and instructions contained in an accompanying book. The recordings call upon the student to offer direct response and, finally, there are additional lessons printed in the book which the student is expected to complete.

It is almost impossible to summarize effectively this very useful, very unusual album. But it is hard to imagine a high school senior facing the inevitable series of examinations which have become part of that last semester who cannot profit tremendously from this album. It can be used in class—yes, and it can be used by individuals. And—small groups can listen to selected portions together.

We haven't discussed here the uses of these recordings by adults seeking renewal of language skills or who do not claim an adequate background in this area. Suffice it to say that libraries will discover this application as will teachers of freshman English the country over, and they will be happy that they did.

Just a word about the author is appropriate here. Morris Schreiber who created the scripts and narrates them is the principal of a school in New York City and a lecturer in the field of English on the college level. Consequently his planning and presentation become models which can be used in teacher training classes.

Stanbow Productions (Valhalla, N. Y.) has a real 'sleeper' in their *We Speak Through Music* which is the creation of Sister Mary Arthur and Sister Mary Elaine from Our Lady of the Lake College in San Antonio, Texas. Sister Mary Arthur, as director of the Speech and Hearing Clinic, must have recognized the great need for material deliberately planned to help children learn to pronounce the variety of sounds which make up our language. The records have "been designed to provide practice material to be used by the speech correctionist

# PRICES CUT ALMOST $\frac{1}{3}$

on Audiotape on 1½-mil **MYLAR**\*

THAT'S RIGHT! *Audio Devices* has cut at least 31% off the price of its premium-quality Audiotape on 1½-mil "Mylar." Now educators can have all the advantages of DuPont's fabulous "Mylar" for little more than the cost of an ordinary plastic-base tape.

Audiotape on 1½-mil "Mylar" is the finest tape in the Audiotape line. Its tough, durable "Mylar" base and professional-quality oxide make it the perfect tape for schools. (Similar price reductions have also been made on Master "Low Print-through" Audiotape on 1½-mil "Mylar.")

\*"Mylar" is DuPont's trademark for its polyester film—the toughest, most durable recording tape base material known to man. "Mylar" cannot dry out or

become brittle with age. Recording tapes on "Mylar" can't break or stretch in normal use, regardless of temperature or humidity. Most importantly, "Mylar" is a known, tested base material—proven by years of use in telemetry, automation and electronic computing applications. Millions of feet have been recorded by professional and amateur sound recordists, too.

# audiotape

AUDIO DEVICES, INC., 444 Madison Ave., N. Y. 22, N. Y.

In Hollywood: 840 N. Fairfax Ave. • In Chicago: 5428 N. Milwaukee Ave.

with the child who has an articulatory disorder." The child is given an opportunity to hear the sounds through songs—simple and pleasing songs delivered by male and female voices and written by Sister Mary Elaine, and because these are so attractive the child enjoys stabilizing these sounds through practice. The sounds involved are all the difficult ones including m, p, b, d, l, k, ng, f, v, fl, kl and others.

These records are intended for—and will be thoroughly enjoyed by—pre-primary and kindergarten children as well as their older brothers and sisters in the first grade. And the learning will take place in an environment of pleasure and participation ideal to the goals sought by the speech correctionist. We should add that in addition to three 12 inch 33.3 rpm records, there is a useful manual containing not only use suggestions but also all the words and music.

When we teach the story of the 1920's and 1930's we are too prone to overlook the statuesque minor political figure, Norman Thomas. But we don't have to make this error again. Spoken Arts (95 Valley Road, New Rochelle, N. Y.) has recently released *Norman Thomas Reminisces* (Spoken Arts 759) which can only be described as another of the 'must' records for schools and libraries. In it Mr. Thomas recreates his political career as perennial campaigner not only for major political office but also for the recognized rights of the individual. He repeats portions of some of his speeches in the course of his reminiscences, and we are reminded that today's conservative and broadly supported social welfare programs were once, and not too many years ago, the program of the Socialist party and the subject of Mr. Thomas' campaigns.

Still with an 'ear to the ground' we heard T. S. Eliot reading *Old Possum's Book of Practical Cats* (Spoken Arts 758) and we found this delightful. There are no surprises in it, and many young and old alike will enjoy hearing such favorites as "The Old Gumbie Cat," "Mr. Mistoffelees," "Gus: the Theatre Cat," "Skimble-shanks: the Railway Cat" and all the others. We have been informed that the publishers, "had prepared erudite notes for this record but they appear to have been intercepted on the way to the printers by Macavity (the Mystery Cat). Too bad! We would have so thoroughly enjoyed purrusing them

For addresses of the sources supplying information on which these listings are based, refer to Directory of Sources, page 258. For more information about any of the equipment and materials announced here, use the enclosed reader service postcard.

## NEW EQUIPMENT

### Kodak 8mm Sound Projector

A new 8mm magnetic sound-on-film projector, unveiled by the Eastman Kodak Company at the Master Photo Dealers convention, promises a versatile, low-cost means of producing sound movies by any school, church, industry, government agency or community group. Amateur shooting of silent 8mm movies has kept pace with the prevailing boom in still photography. Now this new means of producing movies in sound as well as color clears the way for similar boom in school-made as well as home-made "talkies."

Any 8mm film, new or old, may be "Sonotrack" coated, a service handled through Kodak dealers. The magnetic oxide coating, applied between the film edge and the perforations, is activated by an "Alfenol" metal head slightly narrower (20 mils) than the coating stripe, to eliminate edge tracking. An output for attaching an external speaker is mounted on the control panel. Voice and music may be recorded simultaneously, via microphone and phono inputs, the latter usable also as an output to drive auxiliary amplifying equipment. A 2x10" speaker is in the projector case. A red signal light appears

when the "record" switch is turned on and a blinking white light indicates best volume level. Narration and other sound may be changed at will simply by recording over, and thus simultaneously erasing, any previously recorded sound.

The non-axial projection lamp reportedly gives a satisfactory picture 5 feet wide; when recording, it can be reduced to 250 watts to increase lamp life. Lamp and motor switches are separate; a single 4-position rotary switch controls forward and reverse projection, "stills," and power rewind. Projector runs either at 16 or 24 frames per second. Weight approximately 30 pounds. Price \$345. Kodak dealers are prepared to demonstrate.

See local dealer.

### CAMERAS: Still

**35mm View Camera.** Unique versatile professional monobar precision instrument. Less lens, shutter and magazine \$875; Model F with fixed front and rear assembly same \$460; magazine \$138; industrial model tripod \$320; desk stand \$43; 2" to 6" lenses in Compur shutter \$150 to \$255. FAIRCHILD.

For more information circle No. 101 on return postal card.

### PROJECTORS: Movie, TV

**Argus 8mm Projectors.** Three models, all have automatic threading, 150-watt true-flector light. "Showmaster 500A" offers equivalent to 500-watt illumination, \$104.95. Model 750AV

equivalent 750-watt light, \$134.95; Model 750AVZ has in addition also the zoom lens (15:25mm); both 750s include splicer block, auxiliary room light, variable speed control. ARGUS.

For more information circle No. 102 on return postal card.

**Sonector-Phon** is the AGFA Sonector projector plus a base unit with a sound head for the transcription and

### AGFA Projector

playback of magnetic sound, or the playing of film taken on the Fairchild 8mm sound camera. Projector with base \$299. AGFA.

For more information circle No. 103 on return postal card.

**Wollensak 8mm Projector** features self-threading, zoom projection lens (15:25mm), reverse and still, rheostat speed control, 750-watt illumination. Model AZ-715 \$169.50. WOLLENSAK.

For more information circle No. 104 on return postal card.

### PROJECTORS: Still

**Remote Focus Control** on 2x2 projector permits keeping image sharp as well as forward and reverse slide changes by the speaker, leaving projector unattended. Also automatic operation for slide advance 2-30 second intervals; manual operation; built-in editor for changing slides while magazine is in machine; synchronization with tape recorder for soundslide shows; 500-watt. "Superba 77" \$119.95. AIREQUIPT.

For more information circle No. 105 on return postal card.

### PROJECTION ACCESSORIES

**Horizontal stack 2x2 projector** accepts up to 35 cardboard mounts; 300-watt

Kodak 8mm Sound Projector

Argus Slide Projector

Sylvania Tru-Focus lamp; 4" f/3.3 lens; \$54.95. ARGUS

For more information circle No. 106 on return postal card.

## THE INQUISITIVE GIANT

This film shows the workings of a giant radio telescope recently constructed at Jodrell Bank, England, designed to give a new account of the universe and to draw a map of the heavens which may well revolutionize our present concept of space.  
Running Time: 30 min.  
Rental \$10.00 • Sale: \$125.00

## SOUND: Equipment & Accessories

**Collins Speakers** feature Radax (2-cone) construction, long throw edge-wound voice coil, slug-type magnet, glass coil form, die cast frame; mechanical crossover at 2000 cps on the 8" and at 1800 cps on the 12". 20-watt (40 peak) capacity. CS-8" @ 13.50; CS-12" @ \$14.75. COLLINS.

For more information circle No. 107 on return postal card.

**Earphones In Jack-Case:** set of 8 earphones pack into a carrying case which provides built-in jacks and a 5-foot cable with standard phone or other plug. The headphones have

Audiotronics Earphones

Vinyl headbands, double coils, Alnico magnets, phone plugs. AUDIO-TRONICS.

For more information circle No. 108 on return postal card.

**5-channel Intercom** provides two complete sound channels, electronic voice intercom, room-to-room phone, and multiple time and emergency all-page overriding alarm signals. AM-FM radio tuner and 4-speed record changer, mixer unit, booster amplifiers, and Fail-Safe signals are all built-in, at control center. EXECUTONE

For more information circle No. 109 on return postal card.

**Headsets**, combining Clevite BA200 crystal high impedance headphones with Turner dynamic (low impedance) boom type mike for listening-speaking. \$34.25. Headphone alone \$14.70. REDFIELD.

For more information circle No. 110 on return postal card.

**Headphone Plug-In Boxes**, heavy steel with rubber-toed base. 5-phone capacity \$15; 8-phone \$17.50; 10-phone \$15. REDFIELD.

For more information circle No. 111 on return postal card.

**Intercom and Program Console.** New model 12A245 combines manual 3-speed record player, tape recorder, AM-FM tuner, 30-watt amplifier, talk-listen and all-call switches, and intercom speaker - microphone. DUKANE.

For more information circle No. 112 on return postal card.

**Lavalier Microphone** featuring Dynaflex non-metallic diaphragm; omni-

directional, "pop-free" and "boomless" even when handled by inexperienced personnel; support clip and 25 ft of cable; either 50- or 200-ohm impedance; 4" long 1" diameter, wt 3½ oz. \$36. Desk stand type M-40, 9½" long, \$72.50. COLLINS

For more information circle No. 113 on return postal card.

**Sphericon Tweeter**, 3000-40,000 range; built-in crossover at 3000; rated 30 watts in multi-speaker systems; 8 chms; 120-degree dispersion in all planes; may be mounted front or rear of baffle; 4⅝" diam, 4" deep, \$24.94. UNIVERSITY.

For more information circle No. 114 on return postal card.

## LANGUAGE LABS

In these listings every effort is made to give just enough information to enable the reader to decide whether the item is one on which he should seek more. Trade announcements, especially from firms relatively new to the A-V field, often fail to include such important details as price, capacity and distinctive utilization characteristics. This applies especially to "new" lines such as language laboratories or teaching machines where the makers themselves may not yet be altogether certain of final design or pricing. Our readers can get all available further information by circling the request numbers on the inquiry card at the back of this issue.

**Medallion Langlab Systems** provides four drawer-housed tape recorders; console serving 25 student positions (expandable to 50 without adding

Dukane Console Recorder

power) complete teacher-student contact in which teacher may record or monitor any student's work without his knowledge. DUKANE.

For more information circle No. 115 on return postal card.

**Porta-Control.** Castored console carries teacher's control panel, recording and playback equipment, and storage space for student mikes, earphones etc. REDFIELD.

For more information circle No. 116 on return postal card.

**"Tape-O-Matic" Recorder** includes an "add-a-track" feature in dual channel use so that the user may add his own recording while hearing the pre-recorded master (language or music) and may then play back both tracks

simultaneously or separately as desired. This permits a student to "join" in on a group speaking their native tongue, or a music student to take part in professional ensemble. Model 720. VM.

For more information circle No. 117 on return postal card.

**Webcor Educator** tape recorder for desk mounting in langlab installation, includes microphone and headphones, student-to-teacher 2-way communication and signal, dual channel recorder, editing key for instant stop. WEBCOR.

For more information circle No. 118 on return postal card.

**MISCELLANEOUS EQUIP.**

**Automated Teaching Machine.** Model R501 carries 8½x11" programming materials that may be developed by the individual instructor; accumulative error score on student recall response. Model C101 offers multiple choice to develop selective discrimination. \$80 to \$250. RHEEM-CAL.

For more information circle No. 119 on return postal card.

**Colorlith Chalkboards,** made of asbestos and cement, with integrally mixed pigment (brown, green, grey), rigid, lightweight, suggested for double duty material for walls, flush doors, wardrobe panels. One design hinges chalkboard panels at table

More time  
for teaching

**NEW L & L  
T-Rule**

Draw geometric figures - business forms - shop drawings . . . Fast! Rule chalkboards with vertical lines - horizontal lines - curved or diagonal lines . . . Simply - Easily - Rapidly. New L & L T-Rule attaches to any chalkboard in 7 minutes. Ideal for bookkeeping, geometry, shop, music, and other classes.

500 West Lake Street Minneapolis 26, Minn.

**. . . FOR HIGH QUALITY AND LASTING ECONOMY**

It is a recorder that meets the most exacting sound-quality requirements. And because the Ampex's long, trouble-free life means true economy, it is one of the best equipment investments your school or district can make.

One Ampex 351 can do all the high quality recording jobs for the school: original teaching tapes, language master tapes, recordings for speech evaluation and correction, rehearsal assistance for band and orchestra, and any tapes that will be duplicated for distribution to other schools.

Inevitably the Ampex also becomes the school's one heavy-duty "workhorse" giving far more hours of service than any of the school's other recorders. Why? Because the Ampex can give continuous year-round service with minimum maintenance.

These are the same qualities that have firmly established the Ampex 351 as first choice of broadcasters and professional recording studios - and of knowledgeable educators interested in producing tape masters to high standards.

*The use of professional recorders in education has been documented in a new brochure which this coupon below makes available to you.*

## Alaska's Modern Agriculture

Maps show Alaska's location and regions of varying climates. Historic scenes taken 25 years ago show how farming developed. World War II and Statehood have brought a new boom to Alaska, increasing the need for agriculture. Today, modern farming methods are replacing hand methods as the people adapt themselves to this challenging land. The film depicts the conservation and development of resources; recreation, transportation, education, interdependence of the people, opportunities for new settlers.

## Entertainment Film Upsurge

"The entertainment film business is experiencing a substantial upsurge," according to Paul Foght, president of Ideal Pictures and chairman of the NAVA committee in charge of arrangements for a national conference on "The Dollars and Sense of the Entertainment Film Business." This meeting, to which all interested in this phase of the 16mm field are invited, will be held on August 3-4, at the lakefront Moraine Hotel near Chicago, just prior to the big NAVA summer meeting.

The program, according to NAVA, is intended to "bring together all entertainment film people with the objective of really studying ways of improving the business of each businessman attending." Hotel reservations go direct to the Moraine Hotel, Highland Park, Ill., with notice of intention to attend, questions and program suggestions to Paul Foght, Ideal Pictures, 58 E. South Water Street, Chicago 1, Ill.

## Bi-lingual Paperbacks

Bantam Books has just issued its first dual-language paperbacks—two collections of short stories with corresponding text on facing pages. Voltaire, Balzac, Maupassant, Gide, Ayme and Camus are represented in the French-English book, and there is a similarly impressive galaxy in the Spanish-English. This development may not cheer the traditional grammar-book foreign language teacher, but it may well serve the second stage of instruction via the aural-oral approach of the modern language lab.

## 8mm Sound-on-Film

Castle Films announces the availability of 25 subjects to play on the new 8mm sound-on-film projectors (Fairchild, Eastman, Agfa). All new fall releases will come out in 8mm as well as 16mm sound versions. United Artists Associated, Inc., are also turning out their new releases for the home and non-theatrical market in 8mm sound-on-film versions.

## New Films for Old

Coronet Films has new versions of three of its films, keeping right up with the front page changes of history (Alaska, Hawaii, The 50-star Flag). A \$110 color film can be exchanged for its new version for \$60 if owned less than one year and for \$75 if owned longer. Proportionate rates apply on exchanges of b&w for color, etc.

## Field Trips and Other Prizes

A trip for two to Gay Paree is the prize offered by Viewlex to the teacher who writes the best essay or report on "How Audiovisual Aids Make Teaching and Learning Easier"—and an extra bonus of \$250 expense money if the essay includes the serial number of the Viewlex projector used by the winner. In addition, an all-expense-paid trip to next year's DAVI convention at Miami Beach goes to the AV director of the winner's school and six Viewlex

projectors will be presented to the winner's school district. Second prize is a \$100 savings bond and three projectors to the runner-up's school district. Fifty "Honorable Mention" prizes are a year's membership dues in DAVI. Contest ends May 15, 1960.

## CBS Headliners to 16mm Carousel

A dozen of the top documentary programs telecast over CBS during recent months have been turned over to Carousel Films, Inc., for 16mm distribution. Included are nine from the award-winning "Conquest" series, two from "CBS Reports" and one from "20th Century." The Bell & Howell Company was among the sponsors of these thought-compelling programs. Among the titles: "Biography of a Missile," "The Population Explosion," "Secrets of a Volcano," "The Fallout Atom," "Life Before Birth," and "Reaching for the Moon."

Signing over CBS network films for 16mm distribution: from left, David Dash, president, Carousel Films, Inc.; Sam Cook Digges, administrative vice president, CBS Films, Inc.; Murray Beuson, director of licensing, CBS Films.

## NAVA Directory the "Mostest"

"Fustest wit' the mostest" is NAVA's new (6th edition) **Audio-Visual Equipment Directory**. It's bigger than ever (over 250 pages, 600 pictures, 700 models).

Aside from serving as an indispensable, constant-use reference tool for anyone concerned with the audiovisual field, this ever-growing book mirrors most impressively a fantastically changing and expanding AV world. In simple arithmetic there are 136 firms listed who were not in the 1959 edition—and 88 names missing from the lists of a year ago. The major change however is qualitative, as seen in the new sections on language laboratories, teaching machines, production materials for overhead transparencies, classroom receivers of many kinds. (For details on how to order, see "New Publications," Page 256.

## A.A.A.A. Policeman

A.A.A.A. (American Association of Advertising Agencies) is sending its member agencies 5,000 folders telling "How You, As An Individual, Can Help Reduce Objectionable Advertising in TV, Radio and Print." It has set up an

opinion interchange which, through a board committee, evaluates and forwards criticisms to the ad agency responsible. The source of the complaint is held confidential.

Matters held to be seriously objectionable to the public include: (a) misleading exaggerations; (b) deceptive visual "trickery"; (c) bad taste; (d) suggestiveness; (e) statements offensive to public decency; (f) ridiculous claims; (g) "weasel" wording; (h) statements falsely disparaging other products or other advertising.

While the audiovisual industry has, fortunately, been largely free of the sins now coming home to roost on some of the other communication media, this magazine, in its own small way, has served as a critical opinion exchange from time to time, bringing to the attention of our advertisers any lapses from A.A.A.A.-type canons complained of in confidence by our readers. This service has invariably been appreciated by the manufacturer or producer involved—as well as by his critics.

## Bigger Crown

"Crown International," tape recorder division of International Radio and Electronics Corp., and "International Radio," its broadcast equipment division, are expanding into a new 24,000 square foot addition to the Elkhart, Indiana, factory.

## Nord Acquires TUC

Nord Photocopy and Business Equipment Corp. announces the acquisition of Television Utilities Corp. of Corona, N. Y., manufacturers of electronic monitoring and control equipment, including a closed-circuit TV assembly.

## 17th Tecnix Workshop

Practical instruction in the techniques of visual communication was again offered at the Holyoke plant of Tecnix April 19-21. Opening and closing sessions were held in the 1400-seat Municipal Auditorium; the balance of the work done in 15 classrooms at the plant. Incidentally, the presentation folder announcing the seminar is one of the finest of its kind, and the course organization exemplary.

## FASL Now Copp-Clark

The filmstrip, filmstrip and slide product of Film and Slide Laboratories, is now distributed through the Copp-Clark Publishing Co.; Ltd., 517 Wellington St. West Toronto 28, Ont., Canada. The well-known Hymnslip line of short color strips giving the words of many favorite hymns against attractive pictorial background is now supplemented by a similar series of 30 poem-slips and four long filmstrips ranging from "One, Two, Button My Shoe" to "The Village Blacksmith," graded kindergarten through junior high.

## Youth Films Pre-tested

Film producers aiming at a specific age-group audience often find out whether they have hit—or missed—only after the picture is finished. This is particularly true of materials for use with and by teenagers. Family Films met the situation in their current series

## Directory of Sources and Materials Listed on Pages 245-256

by bringing in youth groups as a collaborating audience from the first story conference clear through the screening of the workprint. The results have been so successful in church youth showings that a public school version is being made on the basis of the same art work.

### Magazine Projector?

The announcement of 8mm sound-on-film (Fairchild's in our March issue, Eastman in this) is already casting its shadow on further developments. Hal Roach, Sr., has said that Technicolor is perfecting a double-8 magazine that slips into a sound-on-film projector, runs 45 minutes, is turned over to run another 45 and then returned to its source, requiring no rewinding.

According to Film Daily (March 23, 1960), "A checkup of his statements threw a deep shadow of doubt over their present accuracy, but did not dispel the possibility of just such a mechanism coming into the market sooner or later, from one source or another. The mechanism is in existence . . ." It was developed three years ago by major company technicians working with Motion Picture Research Council engineers. Patent-wise, the mechanism is fully protected. According to the film industry it consists of a magazine "shaped like a thin kidney bean" to fit an especially-designed projection head whose aperture is slotted to receive and travel a 16mm film which has been printed as two 8mm films, combined on 16mm stock.

The principle of the double-8 magazine has long been applied in movie cameras, and multiple picture tracks is older still: Edison had three parallel rows before 1912, the second run in reverse, without changing the position of the reels.

### People

J. Reynolds Carey has taken over the post of marketing manager of consumer products at Orr Industries and will direct the sales of "Irish" tape and related accessories. The position was formerly held by Nat Welch who resigned to start his own merchandising and advertising business.

Mary Field, outstanding British authority on films and TV for children, is on a four-week tour of Canada under auspices of the Canadian Film Institute. During her stop at Toronto, on May 2, she will participate in the formal establishment of the Canadian Center of Films for Children, an activity now supported by more than 70 national and regional organizations.

Dr. John Ivey, formerly executive vice president of New York University, has accepted the presidency of the recently formed "Learning Resources Institute," financed jointly by foundation and industry funds. Among other activities, the Institute will establish at Princeton a research center to study and test technological applications to the learning process.

Arthur Florman, president of Florman and Babb, travelled to the Hollywood SMPTE convention the long way round, making business stops en route at Havana, London, Copenhagen, Amsterdam, Paris, Berlin and Rome.

SELF-TRAINING  
MADE  
EASIER!**

**"ADD + A + TRACK"**

BY

**DRAMATIC NEW DEVELOPMENT IN TAPE RECORDERS!**

- Unique advance for modern teaching and learning! •
- Develops oral skills and promotes retention! •
- Excellent for language and speech students—speeds learning! •
- Helpful to music students—helps improve technique! •
- Benefits teachers—saves time and energy!

Exclusive V-M "Add-A-Track" is the big *new* feature in tape recorders! Opportunities for powerfully effective teaching methods are limitless! Record on one track, rewind the tape and record again on another track *while listening* to the first recording through the V-M recorder's own speakers or through

another speaker system. Then play-back again and you hear *both* recordings *simultaneously!* The student can rerecord his voice or instrument, repeatedly, without affecting the first (or master) track in any way. He can even play a duet with himself!

For budget-conscious administrators, here is the economic way to begin a completely effective modern language laboratory. Here, in one compact portable case, simplicity of operation is combined with practical versatility for the many uses it will find in every school.

Ask for a thrilling demonstration of V-M "Add-A-Track"—an engineering advance that benefits both in the classroom and at home. Investigate *today!*

V-M/ "ADD-A-TRACK" "tape-o-matic"®  
4-TRACK STEREO-PLAY TAPE RECORDER—  
Records and plays-back monophonically on  
four tracks. Plays stereophonic tapes, High-  
Fidelity Speaker System. Simple Push-But-

# THE QUALITY OF LEADERSHIP

No. 4 in a series of messages to all concerned with better education

## Superb Resources Mean Fine Films

Coronet Films has at its command a wide range of resources—made possible by its position as the world's largest producer of educational motion pictures. With these facilities at its disposal, Coronet can make a special contribution to classroom teaching films for all grade levels and subject areas.

**Scriptwriting staff**—The largest group ever assembled anywhere for the specific purpose of preparing scripts for educational films is maintained by Coronet as a professional scriptwriting and research staff. **Special techniques**—Coronet has complete facilities for the full range of technical motion picture processes—animation, X-ray cinematography, cinemicrography, time lapse photography, telescopic motion pictures—whenever the subject of a film requires special techniques for greater clarity and accuracy. **Overseas production**—Coronet camera crews have worked in more than 60 countries to produce films on geography, world history and literature, science, foreign languages, art, and music appreciation—as part of their

regular assignments. **Studio and film laboratory**—Fully-equipped motion picture and sound studios, and modern, professionally-staffed film processing laboratories have been maintained for more than twenty years to assure Coronet film quality through complete control—from idea to finished film.

The depth and range of these unique resources enable Coronet to offer the highest quality of leadership in the production of classroom films.

*This booklet is yours! Send for it today!  
It tells the complete story of Coronet creative  
quality in its library of more than 950 educa-  
tional films.*

## CORONET FILMS

To illuminate all facets of learning

CORONET BUILDING

CHICAGO 1, ILLINOIS

## One-Day Institute Slated For Canada Film Board

An all-day film institute at the headquarters of the National Film Board of Canada in Ville St. Laurent, a suburb of Montreal, will be held Tuesday, June 21. It will be sponsored by Canadian Library Association film committee, the American Library Association audiovisual committee and the ALA adult services division in cooperation with the staff of the National Film Board. Participants will tour the building, and take part in case studies of the production of a film from its preliminary idea to its finished frames.

## NAVA Announces Major Feature of Convention

"Selling to Industry" will be the title of a major presentation at the 20th annual National Audio-Visual Convention, August 6-9, in Chicago, according to an announcement by W. G. Kirtley, president of the National Audio-Visual Convention. Participating in the presentation will be Dr. Richard B. Lewis, Tom Clemens and Jerry Kemp, all of the A-V Center, San Jose State College, San Jose, California.

Kirtley also announced that immediately following this portion of the convention program, NAVA will make first distribution of a new association publication designed to acquaint industrial management with audiovisual opportunities. This booklet is being

prepared by the NAVA Industry and Business Council and the San Jose State A-V Center.

More than 2,500 audiovisual people are expected to attend the 1960 NAVA convention and exhibit. The exhibition, already a record breaker, is the largest single display of audiovisual equipment and materials in the world. The annual gathering attracts business and professional people from all audiovisual fields and from each of the major AV markets: educational, religious and industrial.

## Illinois AV Association To Reactivate Midwest Forum

Reactivation of the war-time Midwest Audiovisual Education Forum was voted at the statewide meeting of the Illinois Audiovisual Association at Peoria, Illinois, April 7-9. Since neither the Educational Film Library Association nor the Association of Chief State Audiovisual Officers plans to hold a national meeting this year in conjunction with the commercial - religious - agricultural - medical meetings and the NAVA trade show in Chicago, the IAVA will assume the responsibility for arranging the customary educational phase of this all round national meeting, it was reported.

Other state AV organizations in the midwest are being invited to join as co-sponsors of this program, a one-day session on policy, theory and administration. Suggested topics include auto-

## Cover Scene

This little baby rhesus monkey doesn't have a mother. Instead, scientists at the Primate laboratory of the University of Wisconsin have substituted a cloth-covered board with a wooden head and the monkey believes it to be its real mother.

This CBS "Conquest" program is now distributed on film by Carousel Films, Inc.

mated teaching devices, airborne telecasting, videotape, 8mm sound projectors, exchange of NDEA experience and the Illinois Curriculum Guide soon to be published.

## Syracuse Offers Course In Religious AV

The Chautauqua Center of Syracuse University will present a course on Audiovisual Communication in Religious Education at the university from July 25 to August 12, 1960. The course will cover Basics of Communication, Psychological Factors in AV Communication, Utilization Techniques, and Promotion of AV Materials in the Church.

Instructor of the course will be William S. Hockman, director of Christian education at the First Presbyterian Church, Glens Falls, N. Y., and editor of the "AV in the Church Field" department for *Educational Screen and Audiovisual Guide*.

## Extension Association Hear Freedman and Orton

Max Freedman, Canadian - born newsman who now is Washington correspondent for the Manchester (England) *Guardian* was a headline speaker at the National University Extension Association annual meeting April 23-27 at Chicago.

In addition to Freedman's talk, addresses at general sessions were given by: Dean Harlan Cleveland, Maxwell Graduate School, Syracuse University; Duane Orton, editor of *Think* and educational consultant, International Business Machines Corp.; and Professor Barry Ulanov, jazz commentator and critic, now on the English faculty at Barnard College.

Highlight of the conference was observance of the 60th anniversary of the

(Continued on page 268)

Closed circuit television is helping teach recruiters to interview prospective employees of The Babcock & Wilcox Company, New York City, efficiently yet swiftly. An actual interview is "piped" to a TV screen in another room, where B&W's recruitment staff is assembled. The live interview provides a demonstration of proper and improper techniques and permits free exchange of comments by the instructor and recruiter-students in the classroom.

Another reason  
to go RCA!

# THREAD-EASY FILM PATH

## ...EASIEST TO THREAD, SIMPLEST TO OPERATE

Almost anybody can thread an RCA "Life-Tested"\* 16mm Projector in less than 30 seconds. Its exclusive Thread-Easy film path is the simplest and most direct in the 16mm field. Even amateurs can screen every now with professional-like ease.

RCA engineers continually search for new ways to make RCA projectors even longer-lasting and easier to operate. As new ideas are proved valuable, they become part of RCA Projector design.

For example, the latest "Life-Tested" Projectors incorporate a nylon film pressure shoe which is kinder to film, quieter operating and so durable that it probably will not require replacing during the normal lifetime of the projector. New, too, is a one-piece, precision tooled intermittent cam and gear which replaces a 3-part assembly. A new claw design accommodates new or old film with equal facility and reduces film handling noise to a hush. Like most changes, these are not readily visible, but are

contributing substantially to the smooth operation and dependable performance you expect from RCA Projectors. This is the important kind of design change, the kind that keeps RCA Projectors always ahead in 16mm.

Competitive comparisons have sold thousands of RCA Projectors. Make your own . . . you'll go RCA!

*Your RCA Audio-Visual Dealer has full details on RCA "Life-Tested" Projectors and other electronic aids to education. Look for his number under "Motion Picture Equipment and Supplies" in your Classified Directory. He will be glad to come to your school to give you a demonstration.*

## **RADIO CORPORATION of AMERICA**

AUDIO-VISUAL PRODUCTS • CAMDEN 2, N. J.

University of Chicago's University College, cradle of higher adult education in the United States. Emery T. Filbey, vice president emeritus of the University of Chicago and a former dean of University College, spoke at the anniversary luncheon April 26.

### Prigge New A-V Supervisor For Indiana Schools

William E. Wilson, Indiana state superintendent of public instruction, has announced the appointment of William C. Prigge, Bloomington, as audiovisual supervisor for the department. He replaces Mrs. Altha Sullivan in that capacity in the state superintendent's office.

Prigge has been an instructor in audiovisual education at Indiana University and taught graduate classes

William C. Prigge

in the field in Gary and Munster prior to his appointment. He has finished all of his work towards his doctorate of education degree with the exception of his dissertation. He expects to complete that by the end of the summer.

### Educational Testing Has New Series on Science

The completion of a new series of ten educational films, *Horizons of Science*, designed both to develop a better understanding of science and scientists and to interest high school students in science careers, has been announced by Henry Chauncey, president of Educational Testing Service, Princeton, N. J.

The films, in preparation for two years, were produced by Educational Testing Service, aided by grants from the National Science Foundation. Al-

fred Butterfield is executive producer of the series. Each of the ten films covers a specific subject by showing a top-ranking scientist in that field at work. The scientist explains his work in his own words and shows how he goes about it.

The primary method for nationwide distribution of the films to schools will be through corporation and foundation sponsorship under which the films will be bought at a cost of two thousand dollars for the complete set of ten films and then presented as a public service to school systems.

Among some 20 corporations that already have signed for the series are Alcoa, Champion Paper, Climax Molybdenum, Thiokol Chemical, Ingersoll Rand, Kennecott Copper, Ohio Edison and Texas Instruments.

Schools wishing to purchase films directly may do so, and may obtain matching funds for the purpose under Title III of the National Defense Education Act.

### DAVI To Raise Its Dues, Effective On July 1

The DAVI board of directors has voted to raise the DAVI dues from \$5.00 to \$7.00. This increase will be effective July 1

This is the first change since 1950 when dues were raised from \$3.00 to \$5.00. Operating expenses have gone up greatly since 1950, it was said, with over half of the dues-paying departments of the NEA having raised dues since that period.

### Reduction in Title III Funds for States

President Eisenhower's 1961 budget provides \$57 million for Title III of the National Defense Education Act. This is a reduction of \$6¼ million from the 1960 appropriation of \$64 million, but an increase of \$2,505,000 over the anticipated actual expenditures for fiscal year 1960.

The reason for the decrease is the inability of some of the states to absorb the available federal money.

A portion of the decrease is in the amount budgeted non-profit private schools; demands for this money are running considerably less than the 12 percent of total Title III money which is authorized under this section. Total outlay under the loan program was only \$1.1 million last year, and is considerably less than that in the current year, fiscal year 1960.

The President is proposing changes in the appropriation language for

## Calendar

June 11-12—"Week-end with Jean Renoir," University of California Berkeley.

June 19-24—American and Canadian Library Associations, Montreal, Quebec.

June 20-24—Institute on College at University Administration, University of Michigan, Ann Arbor.

June 26-July 1—National Educational Association, Los Angeles.

June 27-July 9—Audiovisual Workshop, University of Oklahoma, Norman.

July 5-Aug. 12, August 15-26— Syracuse University Summer Workshop on A-V Materials in Libraries, Syracuse, N. Y.

July 8-9—New York State Audiovisual Council, Schenectady, N. Y.

July 11-23—Vancouver International Film Festival, Vancouver, B. C.

July 14-15—Audiovisual Conference, University of Oklahoma, Norman.

July 30-August 4—National Institute for AV Selling, Bloomington, Ind.

August 6-9—National Audio-Visual Convention, Chicago.

August 17-23—International Religious Executive Consultation, Boulder, Colorado.

August 31-September 11—North American International Photographic Exhibit.

September 28-30—Illinois Audiovisual Education Association, Aurora, Ill.

October 14-17—National Association of Public School Adult Educators, Adult Education Association, Denver.

1961. These will make it possible any state which has an active program and can justify the use of the entire original allocation under the Defense Education Act, to receive the full appropriation despite the reduction of the national appropriation. In other words, according to USOE sources the new budget simply reflects the fact that some states are not in a position to use the full amounts and are in fact carrying over substantial amounts of unused money from the last fiscal year. Thus less money is being requested for these.

# Trade Exhibits Rouse Industry, Educator Interest at Meetings

The NAVA Trade Show—pardon, Exhibit—for many years a most powerful magnet drawing user and dealer alike to the annual meetings, will be bigger and better than ever this August in Chicago. More than four months prior to show date every inch of exhibit space had been sold and Don White, executive vice-president, was working with the Hotel Morrison people to obtain additional booth space. This event always remains TV's biggest show on earth."

The commercial exhibits at the National School Board Association had relatively little audiovisual representation. This lack was more than offset by NAVA's impressive composite exhibit described elsewhere in this issue. For the school board group it is still essential to sell the general "idea" of education, whereas the school, church, industry, government and community A specialists who attend the NAVA meet are no longer questioning whether to buy but "what."

Quite different was the situation at the recent meeting of the NEA Department of Audio-visual Instruction in Cincinnati. A retrospective look at the exhibits here will serve also as a hint of what to expect at NAVA.

More than a hundred commercial firms (124, by count), in exhibit space and sample rooms, showed their wares, ranging from traditional glass slides to six-fangled "teaching machines," closed-circuit television cameras, and language laboratory furniture.

Impact of the National Defense Education Act was felt in the heavy emphasis on these latter three categories. There were no less than 14 language laboratory exhibits of various types; this contributed also to a strong representation of tape recorders (1) and record players (9). These new types of equipment ranged in complexity all the way from a 6-phonograph record listening center to Olivac's little brother. Another year will probably find a corresponding growth in the number of sources of pre-recorded materials for these installations; in this show there were 6 records, 3 pre-recorded tape sources.

While the language lab was perhaps the "hottest" item in this year's show, a good bit of play was enjoyed by 8 exhibits of fascinating devices called various "teaching," "tutoring," and "testing" machines. The simplest of these is in essence a metal cover for a workbook page or mimeographed question sheet of multiple-choice ques-

tions or problems; the student checks his answers against the book's by uncovering a marginal window. At the other extreme were electronic marvels that seemed able to do almost everything short of thinking through the educational applications to which they might be put.

For the most part, the tests posed by these machines were purely verbal, but there was one slot machine, designed to help the verbally retarded by means of pictorial symbols, that actually paid off for correct answers in marbles or bubble gum. Another model (not for sale), made for the Navy 10 years ago by the Viewlex Company, poses a range of 400 test questions on each of four different areas, 1600 in all, against a built-in 30-second time scoring clock that credits the student not only for correct answers, but for the time required to give them. As each multiple-choice answer is given, a light flashes (green for right, red for wrong) and the correct response is illuminated on a lower panel. On this machine quite a number of the problems were posed in pictorial rather than verbal symbols.

The show's closed-circuit television exhibits (6) tended to emphasize specific educational applications. Dage, for instance, telecast the proceedings of the invitational seminars; Argus demonstrated such techniques as classroom televising of what is seen through a microscope.

Other audiovisual techniques, tools and materials now accepted as quite conventional, although in their respective early days held quite as revolutionary as the foregoing three, were represented in depth. Most numerous among the exhibits were the sources of instructional motion pictures (22) and filmstrips (17). There were 4 exhibitors each of flat pictures, transparencies, and display boards; three maps-globes-charts exhibits; one showing a richly equipped mobile science laboratory; seven sources of sponsored free materials.

DAVI's 1960 show marked a high point not only in the number and variety of exhibits, but also in attendance (2437 registered, plus many local teachers who came to evening demonstrations). Exhibitors generally felt that the visiting educators showed greater interest, understanding and enthusiasm than ever for the audiovisual medium and its contribution to better education.

# Taxes Are Good!

*Paul C. Reed*

In the pocketful of scribbled notes that came back with me from DAVI's Cincinnati convention was one that read, "Read 'The Affluent Society.'" I can't remember who suggested it, or why, but I read it, and it has caused me to do more thinking this past month or so than I normally like to do.

It's a book that jars you from comfortable acceptable thoughts. Economist-author Galbraith early in the book points out the fluence and sometimes fallacy of these traditional thoughts and labels them as the "conventional wisdom." It's the conventional wisdom, for instance, that becomes an integral part of everyone's thinking shortly after birth that "taxes are bad." It's good to buy a vacuum cleaner and trade it in every third year for the latest model to keep your house clean. But it's bad for the city to waste money buying new-fangled expensive street sweepers. Why such contradictory standards for cleanliness? Why do we want clean houses and dirty streets? Is that wisdom?

We thought about double standards again the other day when PTA President's letter to the local editor asked why the school couldn't afford a second television set. (That's how Galbraith's book infiltrates your thinking. Don't read it if you're smug with your comfortable thoughts.) We wondered about our different standards for home and school. For watching entertainment television programs at home, the people of this county had bought a set for every three people. But for watching educational television programs in school, for the instruction of their children, these same people could only "afford" one television set for every six hundred forty-two pupils!

What's wise about that kind of conventional thinking? It may save a few pennies in taxes, but at what a risk to the education of boys and girls! Why shouldn't people in their wisdom normally expect that the equipment standards for their schools would at least equal what they insist upon for their homes and private lives? I thought of all the cast-off wind-up phonographs and upright pianos that had in the past been generously transplanted from living rooms to classrooms.

While exposed to a television commercial for the latest tangerine-colored lipstick, I wondered why people in their conventional wisdom think it is good for the economy of this country to spend money for cosmetics and bad to spend money for filmstrips and other instructional materials for their schools.

My father used to tell me he got more for his tax dollar than for other dollar he spent. A lot of other people might think the same way if their wisdom wasn't so conventional. Maybe we need a Madison Avenue campaign and a national education program in this country that would completely reverse popular notions about taxes. It seems to us there's a good chance that taxes are more likely to be good than bad. Maybe with such a shift in popular thinking about taxes we could accomplish what we should in providing our schools and teachers and children with the kind and quantity of modern teaching equipment and efficient learning materials needed for space age education.

I don't know how you feel about him, but I'm grateful to the friend who suggested I read "The Affluent Society." I hope he'll forgive my failing memory and tell me who he is and why he wanted me to read it.

---

Galbraith, John Kenneth. "The Affluent Society." Boston, Houghton Mifflin Company, 1958.

Kodak  
TRADE MARK

**“We saw how practical a teacher can be about A-V aids before we selected this Kodak Pageant Projector.”**

*Says John M. Chilcoat,*  
Principal at the new Nor-  
wood Elementary School,  
Baltimore County, Md.,  
selected by A.A.S.A. for  
an exhibit of outstanding  
school designs:

“From our teachers’ point of view, class-  
room order and pupil attention are basic  
requisites before any learning can take  
place.

“A-V aids, they feel, must contribute to  
the entire learning experience—should not  
disrupt order, nor distract attention. When  
attention is held, the learning process is  
quickened, the subject more thoroughly  
understood.

“Our teachers expressed themselves on  
these matters when we were examining  
projectors. Then they selected the Kodak  
Pageant Projector as their practical choice.

Easy to set up, the Pageant meant pro-  
grams started promptly. Quiet, the Pageant  
didn’t distract students by machine noise.”

Because reel arms, belts and cords are  
all permanently attached in place, the  
Pageant sets up easily. Operation is so  
simple that many teachers leave it entirely  
to the children.

To see a demonstration of the Kodak  
Pageant’s brilliant screen image, its high  
quality sound, and its other practical fea-  
tures, call a nearby Kodak A-V dealer. Or,  
write for Pageant Bulletin V3-22. No  
obligation, of course.

*Kodak Pageant Projector* } **EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.**

# AV Shares Spotlight at School Boards Meeting

by Wm. F. Kruse

**“EDUCATION for World Leadership”** proved a timely convention theme at the 1960 National School Boards Association in April at Chicago. Better communication—the key to greater understanding of the relations of the American people to each other and to their fellowmen throughout the world—won recognition as a major educational objective of both board members and administration.

Better communication also prevailed in the convention meetings, thanks to the active collaboration of a special committee of National Audio Visual Association members. This NSBA convention program included more meetings in which communication was effected by projection of sight and sound than at any previously held. W. A. Shannon, executive director of the NSBA, contacted Don White, NAVA director, nearly a year ago for recommendations as to how audio-visuals might improve communication at this meeting. The result was a series of nine sectional “clinics” plus a presentation at one of the major general sessions by Charles H. Percy, president of the Bell & Howell Company. His theme: “The Teachers and the Taught,” dealt mainly with the changes in communication techniques and their great potential contribution to the improvement of teaching and learning.

Immediately following the Percy speech, Maurice Mitchell, president of Encyclopaedia Britannica Films, showed his sound color motion picture, “The Unique Contribution,” on the hotel’s 20-foot ceiling-recessed screen and answered many questions from the audience on audiovisual education techniques, administration and philosophy.

An outstanding feature of the convention was a closed circuit television network installed just for this occasion by the combined efforts of four leading CCTV firms—Miratel, Dage, Giantview, and Century Lighting. It took no less than 2½ miles of cable to connect up 56 receivers and a three-camera chain to carry proceedings of the general sessions to overflow audiences in all parts of the hotel. Another CCTV demonstration featured William Brish of Hagerstown, Maryland, speaking on “Educational TV in Action: As the Administrator Sees It.”

Each of the visualized topics was aimed at known interests and needs of the school board members and administrators. “How to Use Communication Media to Win Public Support for Better Schools” was presented with the aid of a 10-inch overhead projector on a 12-foot screen, by Roy Hinch, director of audiovisual education for the Euclid, Ohio, Board of Education. Much of his presentation, done in lively cartoon style, had salient points so sharply etched that they inspired lively discussion, pro and con.

The largest of the sectional meetings was addressed by Elton Hocking of Purdue University. His presentation, “Improving Language Learning

Through Language Laboratories,” involved use of a 16mm magnetic-optical motion picture projector, a dual-channel tape recorder, an atomium-type power speaker, and a 10-foot screen.

“Budgeting Your AV Communication Program” was presented by John Molstad of Indiana University, substituting for the head of his department, L. C. Larson, who had been called to Washington for consultation just prior to the convention. The Molstad presentation began with a run-through of the Eastman-AVCOPI color slide set of “The Case of the Curious Citizen” shown via a 2x2-inch remote-control projector and a 33½ rpm record player, followed by 7½ inch transparencies diagramming, among other material, some of the budget studies of the K. C. Rugg.

The U. S. Office of Education was on for presentations. One was by Lloyd W. King, Chief of the State Plans and Reports section, and state and local schools branch, who conducted a roundtable discussion of “National Defense Education Act Opportunities.” In the second James J. McPherson, told “What Your Government is Doing to Improve Educational Communication” with the aid of a 10x10-inch overhead projector, remote controlled 2x2 slides, and an illuminated folding billboard type display.

As announced in the NSBA official program all but one of these audiovisual presentations were “planned in cooperation with the National Audio-Visual Association.” The exception, which the NAVA committee also arranged equipment and operator service, was on “Planning and Management Problems.” It was presented by means of 3¼x4-inch glass slides on a 12-foot screen by management consultants James R. Collier and Leo L. Kornfeld.

The National Audio-Visual Association paid for an exhibit covering one whole wall of the entrance foyer fronting the great hall where all general sessions were held. A brilliantly lighted “Billboard” type institutional exhibit, it told of the unique contribution that audiovisuals make to education, very much along the line of the popular “Gateway to Learning” book put out by the Audiovisual Commission on Public Information. This AVCOPI book, along with an attractive 100 of other literature provided by the 28 manufacturers who underwrote the cost of the composition exhibit, was taken home by hundreds of the attending board members. Most of them also requested further literature sent to their homes, thus assuring continued impact of this A-V exhibit on the schools they serve. More than a hundred NAVA dealer members also shared the cost. Don White and Jean Moore were in charge of the exhibit throughout the four-day meeting.

Running six audiovisual programs simultaneously called for a very considerable amount of a variety of equipment—which was supplied by Bell and Howell, Eastman Kodak, Radiant Screen, Audiotronics, and Midwest Visual Equipment.

By its all-out collaboration in helping to “audiovisualize” an important part of the National School Boards Association 1960 convention, NAVA was able to demonstrate what modern technology and techniques can contribute to better communication.

## School Administrators at the Podium . . .

At left, Charles H. Percy discusses "The Teacher and the Taught." Adrian TerLouw spoke on "Planning Tomorrow's Schoolhouse for Better Communication."

Elton Hocking of Purdue speaks on the value of language laboratories while C. R. Bottenfield, chairman of the session, attends his words. The view at right shows the NAVA exhibit strategically located at the entrance to the hall.

Using a camera lucida. Note that the user sights downward, with the prism reflecting to the eye, in this case, a view of the projector mechanism. The other eye sees the drawing surface.

A commercial camera lucida. The 'home-made' arrangement costs far less, yet results compare very favorably with this unit. The prism can be tilted to a desired angle.

# Threshold to Illustration: The Camera Lucida

by Gene Udell

## *Its Operation*

Specialization tends to make paupers of us all. By the time we receive the products of many specialized hands standardization of the instructional product has often intervened between students and ourselves. Teaching becomes, in part, a process of adapting ourselves to instructional material. More effective results naturally occur when instructional materials are made an integral part of our teaching approach—when they are comfortably controlled by us because we have helped to create them. Such is the case with informative drawings.

Competent graphic illustration is considered by many of us to be beyond our effective skills. While currently this may be true, it need not remain so. The instrument known as the camera lucida can become the threshold to illustration for many teachers who now must rely upon commercially prepared illustrations or do without.

The principle of the camera lucida involves literally the tracing of an image (from either two- or three-dimensional subjects) which appears to be directly positioned on drawing paper

placed below the camera lucida. The doing is far less complex than the telling how-to-do, but let's see how explicit we can be.

The camera lucida, in one of its several basic forms, consists of a 90-degree prism which is silvered on the base, or hypotenuse surface. In use the prism is caused to be suspended over a drawing surface so that there is free air space between the prism and the table top on which the drawing paper is placed. The drawing paper is positioned directly beneath the suspended prism, while the object to be drawn is placed on a support at the level of the prism.

The user sights *downward*, looking into the near edge of the prism with one eye and at the drawing paper with the other eye. The image of the object then appears to be "projected" onto the paper and may be traced.

The size of the apparent image is usually not greater than 8 x 10 inches at maximum. Image size is determined mainly by regulating the distance between the prism and the object. The closer the two, the larger the image appears to be; the farther apart, the smaller the image appears.

Where the most finished accuracy is desired,

Some users may find it advisable to sketch the original object on paper by means of the camera lucida and then improve upon the sketch by working it again on a sheet of tracing paper placed over the first drawing. This procedure is most useful where numerous straight lines are embodied in the drawing. Use of a straight-edge on the tracing paper copy trims up the appearance of the final product.

It may be advantageous, also, to put slightly more light upon the object to be drawn than upon the drawing paper. Balancing illumination is a personal matter for greatest ease in drawing though illumination is not at all a critical aspect of the process.

While the cost of a commercial camera lucida begins at about 65 dollars, the user can obtain fully equivalent results from any silvered 90-degree prism.

For preparing drawings, the scale of existing drawings may be readily modified. For example, a wall map or chart can be reduced accurately for transfer to a mimeograph or a spirit duplicator pencil. Conversely, a small cartoon may be enlarged handily for bulletin board use. Out-of-size illustrations in this way become readily adaptable for a multitude of uses.

Of perhaps even greater value to the user is his ability, via the camera lucida, to reproduce three-dimensional objects in graphic form. Landscapes, habitat groups, models, mock-ups, people at work, hands manipulating objects, artifacts, all are readily reproducible.

## Its History

The camera lucida has been extant for nearly 50 years, yet it is surprising how few people know about it, even among audiovisual groups. Camera lucidas are covered briefly in the *Encyclopaedia Britannica* and the *Encyclopedia Americana*. A page of illustrated use is included in the Famous Artists Course text. A more recent source is a four-page booklet available from the Edmund Scientific Company, Barrington, New Jersey, showing arrangements for making camera lucidas using prisms, lenses and mirrors. Commercial lucidas are listed in major art supply catalogs and are utilized primarily in commercial art studios. A form of camera lucida was long used to facilitate drawing through a microscope until this technique was made obsolescent by the development of photography.

The camera lucida was invented by a British scientist in 1818. William Hyde Wollaston developed lucidas along two basic lines which proved generic to present-day versions of the instrument. The two basic lucida principles consist of utilizing reflection from a plane glass surface and internal reflection in a prism.

Wollaston's plane glass surface was a microscope cover slip. Inclined at a slant of about 45 degrees with the base of the glass being farthest from the viewer, the surface of the cover slip reflected the image of an object to the eye. Simultaneously the eye looked through the cover slip onto paper below causing the image to appear to be projected onto the paper. (Figure 1.) In this instance the apparent image showed itself in the drawing surface upside-down and laterally reversed.

The second or prism type of camera lucida devised by Wollaston consisted of a four-sided prism with corner angles of 90, 67½, 67½, and 135 degrees (Figure 2.) The eye looked vertically down at the position shown, partially intercepting the edge of the prism nearest the viewer. In this manner the single eye saw both the reflected image of the object and the paper below at the same time. The image appeared to merge with the surface of the paper and tracing became possible. If the viewer's head inadvertently moved, the "projected" image on the drawing surface shifted position. The image did, however, appear right-side-up and laterally correct.

Contemporary with Wollaston, Giovanni Battista Amici combined the prism and plane glass approaches into one. Use of a 90-degree triangular prism in front of an inclined piece of glass permitted the viewer's eye to receive the reflection of the image from the glass after the image had come through the prism (Figure 3). This way the image appeared right-side-up and laterally correct and shifting of the image was minimized.

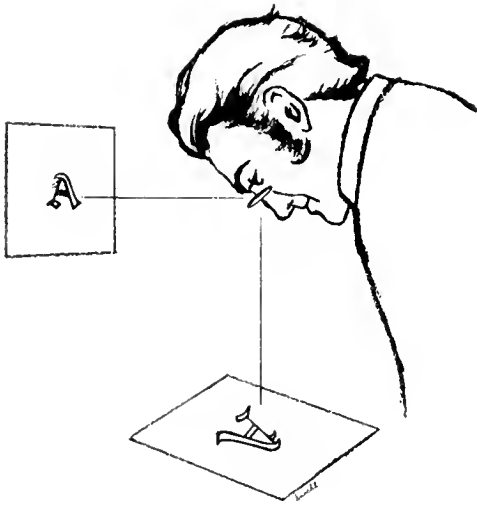

Changes in the camera lucida since the time of Wollaston and Amici have been less in form than in the improved level of performance made possible by newer materials. Developmentally, rather than historically, let us look at some of these adaptations, beginning with the plane glass lucida type.

Because the apparent image seen on the drawing surface when clear plane glass was used was extremely faint, attempts were made to strengthen image visibility. Probably in the late 1800's, someone modified the clear plane glass by applying strips of mirror-reflecting material equally spaced on the glass, in "zebra" fashion. The mirror strips reflected the image more brightly to the eye, which simultaneously looked down through the alternating clear glass strips to see the drawing surface. This ingenious approach was supplanted in time by the beamsplitter.

Beamsplitters are pieces of plane glass specially coated to control the transmission and reflection of light. They can be made to reflect any given percentage of light while allowing the rest to pass through. The overall surface of the beamsplitter appears clear but its reflecting qualities are so improved that the beamsplitter renders ordinary glass and striped mirrors virtually obsolete. (Mirror-type beamsplitters are a variant in common use in supermarkets, mounted behind meat and vegetable counters. The customer sees only a reflection of the wares in the mirror; employees in the cutting and packaging room in the rear can look through the mirror to see when replenishment of the items is necessary.)

To this point in the discussion of plane glass lucidas, apparent images appeared inverted and reversed on the drawing surface. This problem was corrected by utilizing a mirror along with the plane glass lucida. The mirror was set vertically, with the bottom edge of the plane glass inclined outward from the mirror. With this arrangement the image reflected from the mirror onto the plane then appeared correctly, in all respects, on the drawing surface. Today, this constitutes the accepted version of the plane glass lucida (Figure 4).

The most commonly known lucida of this type,

At left, Wollaston's use of microscope cover slip as a form of camera lucida; note inversion and lateral reversal of image. At right is shown Amici's use of a prism combined with plane glass.

and the poorest example, is the widely advertised "Magic Art Reproducer," available for under two dollars at many store counters. Using a piece of thin, clear glass and a second surface mirror (silvered on the underside), the Reproducer creates an image so faint that to be used effectively drawing must be done on black paper with white crayon.

The best lucidas of the plane glass type is, to my knowledge, not produced commercially. It may be readily constructed by obtaining a small piece of first surface mirror (silvered on the exposed face) and a beamsplitter. Lucidas of the plane glass type, with or without beamsplitters, have a basic disadvantage not shared by the prism-type lucidas; differences in eye accommodation may result in the apparent images seeming to resolve themselves above or below the plane of the drawing surface. Correction lenses are available for individuals who note this viewing discrepancy.

Prism-type lucidas have evolved from the time of Wollaston and Amici into a single, triangular 90-degree prism, the hypotenuse-base of which is silvered, itself, or placed on a first surface mirror. The former arrangement is of greatest permanency.

In commercially available form the prism, with faces measuring a scant 3/8 inch, is mounted into a universally adjustable arm attached to a set of telescoping elevating extensions which, in turn, is joined to a form of "C" clamp. The telescoping section bearing the prism supporting arm can be adjusted to tilt over the drawing table and is held to the table by the "C" clamp. In use, the viewer's eye encompasses the reflection through the prism and simultaneously looks down past its edge to see the drawing surface below. Rotating the prism in its supporting-arm permits the image to be seen either right-side-up or upside-down and laterally reversed. The latter can be an advantage if, for example, a person is making a drawing for linoleum block cutting, which calls for backward picture and lettering.

Prisms available from surplus optics establishments, whether silvered or used in conjunction with a first-surface mirror, are generally considerably larger than commercial lucida prisms. This is not a disadvantage; the eye can still look

down past the near edge of the prism to produce an apparent image.

All information presented concerning the prism lucida has been predicted upon the standard accepted use of only one eye for the simultaneous tasks of viewing the object and the drawing surface. Those fortunate enough to have a pair of functional eyes are likely to find that it is easy to use one eye to look downward into the near edge of the prism and the other eye to look down onto the drawing surface, allowing the brain to fuse the two operations into one brilliantly "projected" picture on well-lighted paper. Greatest ease in drawing the projected image then achieved by adjusting the balance of illumination between the object and the paper in a manner to suit the individual's preference.

These are sample sketches of three-dimensional subjects made by using the camera lucida.

# Educational Film Abroad

—An Interview with Ellsworth C. Dent

Educators abroad are impressed by the care with which producers of educational films in this country assure authenticity and sound pedagogy in the films offered for classroom use. This was the impression reported by Ellsworth C. Dent, vice president of Coronet Instructional Films, after a seven-week, around-the-world trip that brought him into personal contact with audiovisual educational authorities in eight countries.

As a result, these films are helping to correct the "public image" of the United States held by many people in other lands, an image often distorted and misrepresented by American fiction films shown in the theatres.

Official recognition of the importance of the teaching film is at least as great in the countries he visited as it is here, according to Dent. In Australia, for instance, he found the majority of the members of parliament attending screenings arranged for them by the National Librarian in a comfortable screening-room right in Parliament House.

In India, a nationwide program is guided by the National Institute of Audio-Visual Education, part of the Ministry of Education. It trains teachers in utilization, conducts research, produces prototype films, displays filmstrips, distributes educational films, and is a center for information and consultative services.

Several of the Indian states have their own audiovisual education centers. Producers—both commercial and governmental—are turning out educational, documentary and entertainment

films by the hundreds. There is full recognition, nevertheless, of the need for importing teaching films, and arrangements were made with Dent for translating many of Coronet's 900 subjects into Hindi and distributing them generally. Many of these—the Abraham Lincoln film, for example—have already been translated into 18 languages, including Mandarin, Urdu, Arabic and Turkish. The Coronet A-Z index ranges all the way from Arithmetic and Atomic Science to Zoology.

In Japan, Dent found many producers of fine educational films and interest in broad usage. In Egypt there was relatively little local production but there was major interest in the use of films for mass education. In all the countries visited, there was a deep respect for the solid production values and meticulous authenticity that marks American classroom films.

Dent's reputation in the field of audiovisual education in this country preceded him on his trip. In the 1920's he headed the department of visual instruction of the University of Kansas and served as secretary-treasurer of the National Academy of Visual Instruction. In the 30's he had a leading part in establishing the motion picture facilities of Brigham Young University and of the U.S. National Park Service. Then followed his executive sales posts with Radio Corporation of America, Society for Visual Education, and Coronet Instructional Films. He is chairman of NAVA's educational committee, President of the NEA exhibitors' association, member of AASA and DAVI-NEA, and life member of the National Education Association.

Mr. and Mrs. Dent are greeted at Bombay by Mr. Govindas Aggarwal, left; Mr. C. L. Aggarwal, right; and Miss Nirmala Aggarwal. The Aggarwal brothers are managers of National Education and Information Films, Ltd., of Bombay.

Mr. Dent and Mr. Donald Wallace, assistant Commonwealth Librarian, Canberra, Australia, and a view over Canberra.

# A School Operators' Club— Why and How

by E. W. Moy

**T**HERE were over 100 applicants for the ten openings in our student Audio-Visual Operators' Club. This situation was not an accident. Here is the story behind it:

In the Ithaca, New York, public schools, it is believed that a student Audio-Visual Operators' Club is a vital part of the junior high school program. Its advantages are two-fold: it provides a much needed service for the school and, of equal importance, it offers the students who participate an outstanding educational opportunity.

The objectives of the Audio-Visual Operators' Club are:

1. To develop avocational skills.
2. To explore vocational opportunities.
3. To render service to school and community.
4. To learn to work with other students.
5. To learn to work with adults.
6. To develop an awareness of the many types of audiovisual media used in everyday life.
7. To help develop the qualities of leadership.
8. To develop the ability to recognize good design and quality in audiovisual tools and materials.
9. To develop a safe attitude in the handling of electrical and electronic equipment.
10. To develop skill in the operation of all common types of audiovisual equipment.

If we are to believe that the extensive use of audiovisual materials is essential to a good educational program, we should also believe in a strong, active AV Operators' Club. First we will discuss the service aspect.

Teachers are busy people. They do not have the time to pick up, set up, operate and return the many types of equipment and materials that are available. While it is believed that all teachers should know how to set up and operate AV equipment, especially for emergency situations, it is also believed that they should be free to take care of their classes.

Someone may ask, why should not the teacher

be the sole operator of the equipment? There are two reasons:

Teachers, as previously stated, should be free to give their full attention to the students the major portion of the time, and through experience it has been proved that the student operator causes less damage both to materials and equipment. This is not a slur against teachers; the reasons are very understandable. Teachers are busy people. The student operators are willing and able to spend a major part of their free time and effort in learning how to operate and take care of AV equipment. In fact, in many instances, the students would spend all of their spare time at the AV center if left to themselves.

Secondly, there are many outstanding educational opportunities for those who are members of such a group. The student operator learns many skills which are useful avocationally and in some cases vocationally. He learns to work and cooperate with his peers. He learns to work and cooperate with adults, and this is believed to be important. In many instances when a student leaves school he goes to work with older adults rather than with people his own age. The student operator has learned responsibility, also has respect for equipment and materials.

The 40 or so student operators trained each year in the junior high school are given a very strenuous program. There is much more to it than just learning to operate a sound projector. Students must first go through an eight-week probationary period during which time they must complete certain requirements such as learning to operate eight different kinds of equipment; plus delivering and picking up equipment. After completing these requirements within the allotted time they are then given full status and privileges and move into the second training stage. Student operator training is a continuous process for club members and does not actually stop until the student leaves the school at the end of the ninth grade.

In March 1954 the Ithaca public schools system conducted a general workshop for the entire

faculty. A part of this workshop dealt with a demonstration on how to use educational films properly. The AV department had a number of displays of material and equipment. Displays were maintained by student operators.

At that time it was decided that arm bands for operators were needed so that people would know who they were. A shield was designed and transferred to yellow cardboard by running it through a liquid duplicator. Later one of these shields was sent to a commercial firm to be made to a cloth arm band. This same shield was also made into cuts to be used on the cover of an AV bibliography and on the front of the student operators' license. Lapel pins made up with the same shield proved too expensive.

When the student finishes his basic training period he receives a license and an arm band to wear in school. If he continues on as an operator to the end of his ninth year he may take his arm and home and keep it. Ithaca also has two standard types of lapel pins. One is for satisfactory service and the other is for outstanding service.

The operators' club has a very definite table of organization. There are four offices plus various other responsible jobs. The chief operator and his three assistant chief operators are elected by the group. This is done once a year. To help these officers other students are assigned various responsibilities such as film checking, noon hour operation of equipment, and helping in the training of novices.

All regular members of the operators' club report each morning before school and attendance is taken. They deliver all equipment and materials to be used that day. If material is used in their own classes they operate it. We try to have at least one operator in each class. At the end of the day each person must return to the AV room the equipment that he delivered in the morning. This is enforced very strictly. Failure to do this without sufficient reason means expulsion from the club. The purpose of this is to try to develop within the student operators a sense of respon-

sibility. Most boys are able to do this without any great degree of difficulty.

In the junior high school we are fortunate to have an activity period the last hour of each school day. Monday is meeting day. At this time both groups meet together. The rest of the training is carried on after school. The boys work hard but also have fun. The club has at least two parties a year and the members also have the privilege of eating their lunch in the AV room at which time they can show any motion pictures that are available.

Many adolescent boys get a great deal of pleasure out of working with mechanical and electronic materials and equipment. Many times we must practically push them out of the door when the shop is closed around 5 p.m. When we spoke to one mother about the amount of time her son was putting in after school, she said that it was a great deal of comfort to know that her son was doing something constructive.

The club does not take only the best boys in the school. Sometimes it takes some of the "problems." Some boys are so full of vim, vigor and vitality that the regular school program does not keep them satisfied. If this is true we have the means to help use up this excess energy. This often keeps them out of trouble. Some of our very best student operators come from the slow learner groups. It takes longer to train these boys but once they learn they never forget.

Here is the case history of one of our former student operators. John started as a student operator in the seventh grade and by the time he was a ninth grader he was chief operator. In the meantime he had become interested in radio. Later in high school he continued his activities in the Senior Operators' Club and built himself a small radio station in the basement of his home. When he finished high school he went to college where he studied radio and TV. Now he is an experienced announcer and also has a license as a radio engineer. Many former student operators have found both vocational and avocational interest through the student operators' club activities.

The operators' club of the Ithaca, N. Y., public schools and the distinctive armband which the members proudly wear.

On July 4, 1960, the American flag will change for the 26th time. These changes provide a useful time-line that makes geography and history more fascinating and meaningful. No other country changes its flag as it expands.

# Visualizing 50 States

by E. Milton Grassell

Every country has a national flag for its chief symbol. But the United States is the only nation in the world that expands the flag as the country enlarges. On July 4, 1960, the American flag will change for the 26th time.

Have you used the flag as a time-line to help students understand geography and history? Mr. Leonard M. Hunting, an educator with 20 years' experience as a classroom teacher and administrator, has!

Interested in how he does it?

The accompanying pictures pinpoint Mr. Hunting's method. They show how he calls attention to the flag's stars and stripes to accent important American and recent world history and to illustrate geographical concepts.

In addition to the more traditional reference material, Mr. Hunting makes ample use of maps and globes and other aids. Flip charts, for instance, are one of the many efficient aids that students and/or teachers can make quickly and easily. The base material for the flip charts is 20-pound *butcher* paper. The graphic illustrations were enlarged and transferred to the flip charts with an opaque projector.

### FIRST NATIONAL FLAG

clockwise from above . . .

The 13 original states correspond to the 13 stars in the field of blue. The circle was used so that no state could be first or more important. Several states have decreased in size since they entered the Union.

Between 1818 and 1848, ten new states were admitted and the flag changed nine times. All the states in 1848 still bordered other states. The next state was to be far-away California.

This visualization illustrates two important points. First, no stars were removed from the flag during the Civil War; and second, the admission of California, Oregon, and Nevada added non-contiguous states to the geography of our country.

Lincoln died at age 56. During his life the American flag changed 15 times. During the 19th Century, the American flag changed, on the average, every 4½ years.

Another great westward movement doubled the width of the United States and changed the flag on successive 4th of July's. Our country now has eight time zones instead of four and extends one-third of the way around the globe.

The United States has no territories, since Alaska and Hawaii are now states. These are the first new states in 47 years but before that eight flags were changed after only two years. In fact only six American flags have lasted over ten years.

# Audio and Visual Terminology

by Samuel Cohen

"Your editorial in the April, 1960, issue of *Educational Screen and Audiovisual Guide* stimulated my interest in the area of terminology in the audiovisual field—with the enclosed article as the result."—Mr. Cohen

THE years since 1900 have seen a rapid rise in the use of equipment and materials to further instruction through realism, concreteness and utilization of multi-sensory experiences. Electricity and the modern machinery utilizing this force have made possible the communications media we use today. And as the field of interest has developed, confusion in terminology has grown.

Such terms as "school museum," "visual," "auditory," "visual-sensory," "perceptual," "audiovisual" and "instructional" have been used to describe "aids," "materials," "programs," "instruction" and "education." The use of these terms did not provide any clear-cut meanings. Many authors used them interchangeably, some used them with overlapping or contradictory meanings, and others avoided any attempts to define terminology. For example, although Kinder in 1950 defined the term audiovisual in his book and used it in the title, he included motion pictures, dramatization and puppetry under the heading "Visual Materials and Techniques," while television appeared under "Auditory Materials and Techniques."<sup>1</sup>

The question is whether these tools are simply aids or crutches for other learning materials and for the teacher or whether they are valuable in their own right. It is now rather widely accepted that the latter is the case, and the term "materials" is therefore gaining in usage, although persons accepting the meaning of "materials" may still use the term "aids" from habit or lack of careful attention to the use of terminology.<sup>2</sup>

The more difficult problem stems from the way in which the field of audiovisual education grew—rapidly, unevenly, with personnel from various

backgrounds and without common training and professional vocabularies. Because the audiovisual movement began with the opening of school museums which continually added more and more materials and equipment to their available resources, the term "school museum" early developed into a label for all audiovisual materials. In the following years, however, it came to have more specific meaning, and a new term came into popular and professional usage: "visual education." This term first appeared as the title of the Keystone View Company's *Teacher's Guide to the Keystone "600" Set*, a guide to the use of slides and stereographs, published in 1960.

Visual education obviously grew out of the concern with utilization of pictures that developed from the time of the Renaissance, with special growth after the invention of photography and the half tone in printing and of early projection and viewing equipment. The introduction of the motion picture and its growth after 1929 led to the need for a "visual specialist" who could select, purchase, maintain and schedule equipment and films, and train operators or teachers to operate equipment. The expansion of this program led to the Visual Director's position and the appearance of visual education societies and periodicals. An inspection of the *Educational Index* from 1929 to 1932 reveals 149 articles under the heading of "Visual Education," with cross references to Blackboards, Lantern Projection, Moving Pictures in Education, National Academy of Visual Instruction, and Stereographs. All of the articles deal with visual aids, except for a few that consider "visual and other sensory aids."

By this time, radio had become an important educational tool in its own right, and the same volume of the *Educational Index* contains six pages of articles dealing with this medium, plus four articles under the heading of "Phonograph," but there is no cross reference to "visual education." In the schools, too, the existing library organization retained control of printed materials, the visual departments handled the pictorial problems, and the audio or radio division took care of the broadcasting medium. These three specializations, with separate authority, responsibility, organization and administration seem to have been typical of the general pattern of development. Some people in the field of "visual education" included all audiovisual materials in their considerations, but in general materials were emphasized which utilized the eye as the major avenue to learning. The *Dictionary of Education* defines visual education as "all education based on the use of materials (other than books) that appeal directly to the sense of sight."

<sup>1</sup>James S. Kinder, *Audio-Visual Materials and Techniques*. New York: American Book Company, 1950, Table of Contents.

<sup>2</sup>For articles dealing with this problem, see C. L. Anderson, "Should It Be Audio-Visual Aids or Audio-Visual Materials?" *Educational Screen*, May, 1945, pp. 198-199; F. W. Noel and E. W. Noel, "Looking Ahead Twenty-five Years in Audio-Visual Education," *Educational Screen*, February, 1946, pp. 6-79; James S. Kinder, *op. cit.*, pp. 4-12, and Paul C. Reed, "How Special Is Audio-Visual?" *Education*, June, 1955, pp. 623-625.

Between 1932 and 1935, there were 146 articles listed under the heading of "Visual Education" in the *Educational Index*, with a few of the articles by men like McClusky, Dent and Hoban containing a new term: "visual-sensory instruction." They recognized that the division of visual from auditory was artificial, but they were ahead of their times. Radio was now a much larger grouping than visual education in the *Educational Index* with "Radio in Education" a very large subdivision, but still no relationship was established between audio and visual education.

In the next volume covering the years 1935-1938, the *Educational Index* listed 164 articles under the heading of "Visual Education." Of these, some articles contradicted the heading by using the term "sight and sound aids" in their titles and 12 others used the term "audio-visual materials" for the first time. (One of the earliest uses of the term "audio-visual" seems to have been in the title of an article by Max R. Brunstetter in 1936, "The Audio-Visual Studio.")<sup>3</sup> All of this occupied less than three pages, while "Radio" had grown to 13 pages of listings. The listing "Phonograph" had grown to 10 articles. Of course, the mention of the term audiovisual here does not imply that it had never been used before, and no one seems to be able to claim the distinction of being the first one to use the term. The term "visual-sensory aids" was short lived, since it seemed to imply a distinction between sensory perception and intellectual perception that did not stand the test of practice, although it did convey the idea that men should be educated through all of their senses.

In the 1938 to 1941 volume of the *Educational Index*, 28 of the 255 articles contained the term "audio-visual" in their titles. These articles, though still under the heading of "Visual Education," began to indicate a wide awareness of the close interrelationship among visual education, audio in education, photography, phonographs, motion pictures, excursions, etc. Audio and visual could not be kept departmentalized much longer, and in the 1941-1944 edition of the *Educational Index* the heading "Audio-Visual Education" appeared for the first time with 68 articles listed. The influence of the armed services' experiences in World War II was reflected in this change as well as the growing movement for combining the terms audio and visual. However, "Visual Education" was retained as a separate heading and had 60 listings. Cross references included all of the audiovisual materials. Audio-visual materials were gaining "co-ordinate standing with such other learning materials as books, pamphlets, newspapers and the like," and coming to be considered as primary means of communicating ideas.<sup>4</sup>

In the volume for the years 1944-47, the heading "Audio-Visual Education" contained 220 listings, and "Visual Education" another 146. The 1947-50 volume contained 95 items under "Visual

Education," and seven pages dealt with materials under the headings "Audio-Visual Aids" and "Audio-Visual Education," while cross references were made to "Audio-Visual Demonstration Centers." In this issue "Instructional Materials Centers" was a heading for the first time, but there was no cross reference to the audiovisual field. A new phase of the materials problem had been reached.

**A**UDIO and visual had been united and had come to include all activities concerned with "types of teaching aids that are not exclusively verbal."<sup>5</sup> Brown and Vandemeer defined audiovisual materials as those "which do not depend exclusively upon comprehension of words or similar symbols."<sup>6</sup> This created a special area known as audiovisual education but left as many problems as had been solved. The materials of instruction for teachers to use with students were divided as artificially as ever on a basis of printed vs. non-printed, verbal vs. non-verbal or sensory vs. intellectual. Any teacher could see that such divisions would not help her utilize more easily the materials in the classroom. Many perceptive educators could see this too, and demands for improving the situation came, as usual, long before they were reflected by cross-referenced headings in the *Educational Index*.

As far back as 1928, Anna Dorris had seen the need for concentrating on the child rather than the materials when she wrote that any educational tool or device must be considered only in terms of the "degree that it may help pupils solve their childish problems and stimulate their interest in gaining new knowledge."<sup>7</sup> In 1937, with a much improved idea of curriculum, Max R. Brunstetter pointed out that educators must "integrate basic instructional materials with the local classroom teaching," both in the traditional program that existed, and in the new areas and methods of instruction that were developing.<sup>8</sup>

In 1944 the University of Chicago established a center for research on audiovisual instructional materials, but set out to "study and develop all kinds of instructional materials."<sup>9</sup> In 1945, Stephen M. Corey spoke of the need to "develop simultaneously a variety of well-integrated instructional materials to contribute to specific

<sup>8</sup>Kinder, *op. cit.*, p. 6.

teaching objectives," and advocated the establishment of "instructional material development centers."<sup>10</sup>

Paul W. F. Witt summed up the situation in an excellent and forceful manner when he wrote that audiovisual materials are all simply "instructional materials and are used for much the same purposes that teachers use books and other printed materials. Any hindrances to the development of this concept should be eliminated. Separation of audiovisual instruction from other aspects of the instructional program tends to keep emphasis focused on materials as such rather than on the needs and concerns of the learners."<sup>11</sup> It was only in 1955 that echoes of this statement were heard when Paul Reed saw the need for integrating all instructional materials and Edgar Dale wrote in *The Newsletter*, "I am sure that the time has now come to think much more broadly in terms of all instructional materials."<sup>12</sup>

**T**HIS concept of a unified approach to all "instructional materials" has by no means gained nationwide acceptance as yet, and among those who do accept it there is no agreement as to how to achieve it. Some leaders see it as question of cooperation between audiovisual and other personnel. James Kinder says that "materials of any type whatsoever cannot be divorced from the total educational process, if they are going to accomplish maximum results. The Director of Curriculum Research and Construction and the Director of Audiovisual Education must work together."<sup>13</sup> Brown and Vandermeer agree, and see the integration of instructional materials being accomplished by the teacher upon the basis of information provided by the various administrative departments,<sup>14</sup> and F. W. Noel wrote in 1949 that "administrators should avoid placing the (audiovisual) department where it might become involved in the differences and disputes which frequently revolve around curriculum revision."<sup>15</sup>

Others see it quite differently, as do Professors Brunstetter and Witt when they say that the "school administrator should make the audiovisual director a member of the team responsible

for supervision and curriculum improvement." L. C. Larson points out that the primary purpose of the audiovisual center is to "find ways enriching the curriculum," and that of the audiovisual director the "improvement of instruction."<sup>17</sup> Helen Seaton, on the basis of her 1947 study, offered the opinion that "development of a unified department of instructional materials probably offers the greatest opportunity for full integrated use of all teaching aids in the future." Paul W. F. Witt wrote that "from a practical point of view it is desirable also for teachers to be able to come to a single source for information and assistance relative to the use of instructional materials, and to obtain there whatever materials they may need."<sup>19</sup> He added that the "centralization of responsibility for all types of instructional materials seems highly desirable," and with Max R. Brunstetter in 1954 recommended the provision of a central instructional materials center.<sup>21</sup> In 1955, Paul C. Reed sees audiovisual and printed materials as the concern of an expanded department of instructional materials:

Changing over from "audiovisual materials" to "instructional materials" involves much more than deciding whether to have the old departments cooperate better or to establish a new expanded department of instructional materials.

The question remains: Is there any justification for maintaining a separate and distinct classification called "audiovisual education?" "Instructional materials" seems inadequate, and "instructional resources" raises hackles in some quarters. From blackboard drawings and maps to language laboratories and teaching machines a strong connecting thread is needed. Programming is becoming a big word in the equipment and materials field and suggests an integration of the current audiovisual area with the curriculum area. Perhaps a clear organizational pattern based upon current realities and needs will make it easier for specialists and teachers to work together, to understand each other, to avoid duplication and confusion, and to provide better educational experiences for the nation's pupils.

Thomas Brandon of Brandon Films, distributor of Blue Ribbon award film "Richard III," accepts American Film Festival honor from EFLA President Elliott Kone and Arthur Knight of the "Saturday Review."

Galon Miller, director of A-V education of the South Bend public schools, congratulates J. W. Cosman, accepting an award for the National Film Board of Canada film "Eternal Children."

## Film Board of Canada Top Winner at Festival

The National Film Board of Canada was the big winner as Blue Ribbon awards were presented to 33 films and 17 filmstrips at Educational Film Library Association's second annual American Film Festival. Six hundred film producers, distributors, sponsors, and A-V people from all over the U.S. and Canada attended the event April 18-22 in New York City.

Winners announced and presented at the award banquet, Elliott Kone presiding, were hosted by Ralph Creer, Vera Falconer, Arthur Knight, Galon Miller, Howard Thompson and the Reverend Paul H. Vieth. Personal awards were presented to Julien Bryan, Robert Churchill, William P. Gottlieb, and Hans Möller, all of whom had participated in a "Meet the Producers" panel discussion of production problems and potentials on the previous evening.

From the point of view of the producers and distributors registered at the Festival, the coffee-breaks, critique sessions, EFLA reception and the cocktail party preceding the banquet were a series of unprogrammed panels enabling them to "Meet the Users." Among public library A-V readers present were Dorothy L. Eissler (Evansville), Helen D. Harrison (Atlanta), James L. Limbacher (Dearborn), Violet F. Meyer (Baltimore), Euclid J. Peltier (Boston), William F. Peters (Detroit), Masha R. Porte (Dallas), Eugene A. Pringle (Brooklyn), John W. Quinnan (Dist. of Columbia), William Sloan (New York).

Typical of the key people representing A-V divisions of school systems present were Dr. Edward Bernard, director of the Bureau of A-V Instruction of the New York City Board of Education, and Galon Miller, A-V Director of the South Bend public schools.

Among some four score representatives of college and university A-V programs were Irving C. Boerlin (Penn State), Robert A. Cox (Syracuse), Eva H. Epstein (Teachers College, Columbia), Aubert Lavastida (University of Michigan), Leo L. Leveridge (NYU Medical Center), Kenneth M. McIntyre (North Carolina), John W. Mitchell (USAF University), Charles J. Moravec (Lehigh), Joseph P. Moss (Denison), Kenneth L. Russell (Sam Houston State Teachers), Robert Steele (Boston), Werner R. Wagt (Florida State), and John B. Watson, Jr. (Dartmouth).

Other festival registrants came from every field of A-V endeavor and included such notables as M. M. Akermark of the Museum of Modern Art film library; Pete Doering of Jam Handy; Maxwell Dunn of the U. N.; John Flory of Eastman Kodak; Edward A. George of the United Presbyterian Church; Robert E. Green of the National Academy of Sciences; Stanley S. Merrell of the Boy Scouts of America; Floyd Rinker of the Council for a TV Course in the Humanities; Jack M. Rottier of the USDI Bureau of Land Management; Sid L. Schwartz of the USDA Motion Picture Service; and Tom M. White of the Business and Education Council of New York.

In addition to speaking on "Exploration and the Film Medium" at a luncheon sponsored by the New York Film Council, Mrs. Robert Flaherty attended Festival screening sessions and contributed valuable comments to discussions. The most popular registered juror was Miss Pamela Williams, subject-area specialist in the competition category devoted to Films for Children, who qualified because of her age—going-on-ten. Adult jurors backed Miss Williams' vote in favor of *The Red Balloon*.

# AV in the Church Field

by William S. Hockman

## Filmstrip Standards

In 1957 we called attention to the need for standards for the filmstrip. A few people were alarmed. They thought any mention of the filmstrip's inherent weaknesses as a medium might wreck the business. What pessimism!

At Penn State, where the 'Green Lake' conference was held that year, a few people took this challenge seriously and called an informal meeting of those interested. Some 20 came, all deeply concerned. When it adjourned it was pretty well agreed that there should be another meeting to go further into the matter of specifications for the filmstrip.

Meetings were held, and the result was a folder entitled *Standard Specifications for the 35mm Single Frame Filmstrip*. It lucidly sets forth dimensional and other specifications in the hope that the industry will adopt them.

A week later I received a filmstrip which had been manufactured under these specifications. There were the green frames to start on, the right number of frames for all the credits, the body of the fs and at the end the two red frames.

Without sacrificing individual initiative and creativity, the manufacturers of filmstrip projectors would do well to get together and set up a few simple standards for the machines which are to project these much-improved filmstrips. It is not too early to get at this job. One thing is sure: The pro-

jected still picture is and will be the workhorse of visual aids for some time, but we are equally convinced that the filmstrip in its present form and format can stand some improvement as a medium. This goes for projectors, too.

## Yes, Do Stop!

May I quote: "A startling new film, full color animation, with an original jazz score: subject, safe driving; the title, *Stop Driving Us Crazy*." Quoting further from a little exploitation folder: "It is a crazy new film, with crazy color, crazy animation and a crazy new jazz score, but it's good education, too."

I can agree up until the last clause. From then on I would like to disagree. I did not find the film funny. What's funny about safe driving, or accidents, or trying to put Christian standards into practice when driving? I tried to like this film (running time 10 minutes) but I just could not. I tried to think that it was good education in a new format, but I could not see it that way. The flier talks about "top modern talent from films, art, television, and music." What a pity there were no educators available! But I'm glad the General Board of Temperance of the Methodist Church made the film. It may prove two things: that the Methodists have come a long way when they can jazz up temperance; and that it takes know-how as well as 'talent' to make a good and useful educational

film. Available from the rental library of the Methodist Publishing House, Nashville 3, and many other cities.

## Africa Film Gets Top Honor

At the American Film Festival recently held in New York, the 30-minute color film *I'll Sing, Not Cry* won the Blue Ribbon award for being the best in the religious category. Congratulations to Berkeley Studio, producer for the United Church of Canada and the United Church of Christ (USA). The material, both visual and sound, was gathered in Angola in 1958 by a team under the able leadership of Rev. Anson Moorhouse. Mr. Moorhouse has made films in China, India and Africa for the United Church. This was his second Africa film. The first, *The King of Man*, took top Canadian honors and won high acclaim in the USA. When the award was made, Professor Paul H. Vieth of Yale University made special mention of the unusual soundtrack, the quality of the photography and the sensitive portrayal of the African people.

## It is Disturbed

The title for the film *Africa Disturbed*, released recently by the Broadcasting and Film Commission, came out of a conversation Dr. Roy G. Ross, long-time missionary to Africans and one of the real experts on this vast continent, had with an old man. "Yes, Africa is different now. It was quiet for many years; now it is disturbed. How disturbed the headlines will tell us day by day. Why disturbed you will know better after you have seen this interesting and informative 30-minute film in fine color and sound. We recommend it highly for young and adult groups in the church and community. Dr. Ross speaks softly of course, but he calls on his African friends to tell us what they think. They are thoughtful and challenging. This is the century of their freedom and we as a free people will need their friendship even as they now need ours. See the film; it has much to say.

## New Bible Series

Eye Gate's new release, "The Story The Bible Tells," is a series of filmstrips designed to give in outline form the great Bible events for children 6-11. It uses language which children will understand and pictures which says the producer, "which nourish the imagination." Better, these filmstrips will help primary and junior children begin to grasp the sweep and significance

Word Records, Inc., religious record producers, has opened a \$325,000 plant in Waco, Texas. Most of the staff of this growing firm are former ministers or lay leaders. Ethel Waters, who has a new career as a sacred song singer, is a member of Word's recording staff. Radio commentator Paul Harvey has also narrated several records for Word.

ance of the great story the Bible tells. Short of space, I can't go into the merits of each of the four titles beyond saying that they are good and useful: *The Beginning, God's People, The Christ Child, Jesus Our Savior*. There is an excellent manual for the teacher, and fine suggestions for getting the most from these filmstrips. Two LP records carry the commentary for the hour and the whole unit sells for \$25. The art, stylized realism in four colors, is interesting, good and communicative. The commentaries are pretty well adjusted to the needs of the target audience, nicely spoken and well recorded. Full information from Eye Mate, Inc., Jamaica, 35, N. Y.

### Why Is Usage Down?

Some weeks ago a news release came to my desk saying that many churches were not taking full advantage of the wealth of films, filmstrips and other religious visual aids now available for congregational preaching and teaching. This is true, but hardly news'.

On this matter we would like to make three observations; first, the producers deserve some of the blame, and the distributor is at fault, and the local church has been taking its ease on the status quo, not in Zion.
